

# **Smoke and Carbon Monoxide (CO) Alarm Requirements**

## **1. Smoke Alarms**

Smoke alarms shall be located in the following locations:

- a) One in every sleeping room.
- b) One outside the sleeping area (corridor) that is in the immediate vicinity of the bedrooms.
- c) On each additional story of the dwelling, including the basement and attics lawfully converted to habitable space.
- d) In dwellings or dwelling units with split-levels and without an intervening door between the adjacent levels. A smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full-story below the upper level.
- e) Smoke alarms shall be installed not less than 3 feet (914 mm) horizontally from the door or opening of a bathroom that contains a bathtub or shower unless this would prevent placement of a smoke alarm required by Section [R314.3](#).

## **2. Carbon Monoxide Alarms**

Carbon Monoxide Alarm shall be located in the following locations:

- a) A carbon monoxide alarm shall be provided on every story containing a sleeping area and within 10 feet. More than one carbon monoxide alarm may be required to ensure no areas requiring a CO alarm exceed the 10 feet distance.
- b) A carbon monoxide alarm shall be provided on every story that contains a carbon monoxide source.
- c) A combination smoke/ carbon monoxide detector can be substituted for two individual detectors in the same location where required above in 1b or 2a.

### **All alarms can be operated with a 10 year battery Carbon Monoxide Source**

A Fossil Fuel Burning device: Any device that uses wood, oil, natural gas or liquid propane gas as fuel to operate.

Examples of a fossil fuel burning device are as follows: Fire place, oil or gas boiler, oil or gas furnace, gas stove, oil or gas water heater and etc.
