Re: Letter Report on Subsurface Soil and Groundwater Investigation
Proposed Building Complex
113 King St.
North Castle, NY (CSA Job #19-215)

Dear Mr. Devlin:

In accordance with our revised proposal dated 19 October 2021 and your subsequent authorization, we have completed a Subsurface Soil and Foundation Investigation for the referenced site. The purpose of this study was to determine the nature and engineering properties of the subsurface soil and the groundwater conditions for the new development. We understand that the planned construction will consist of 30 town home units, roads, and a stormwater management system.

Our scope of work for this project included the following:

1. Reviewed the proposed layout, the existing site conditions, the expected soil conditions, and planned this study.
2. Retained Lawrence Construction to advance twenty five (25) test pits throughout the site.
3. Retained General Borings Inc. to advance nine (9) test borings throughout the site.
4. Performed sixteen (16) infiltration tests in the planned stormwater management areas.

5. Laid out the boring and test pit locations in the field, visually identified the soil layers encountered, obtained soil samples, and prepared detailed boring and test pit logs and a Boring and Test Pit Location Plan (Figure 1 and Figure 2).
6. Analyzed the field data and prepared this report containing the results of this study.

SITE DESCRIPTION

The site is located to the west of King Street (NYS Route 120) between Cooney Hill Road to the north and American Lane to the south. The southern portion of the site is occupied by existing multiple 3-story office buildings. A pond is located directly adjacent to one of the three story office buildings. The remainder of the site contains asphalt parking and landscape area.

The northern portion of the site is mostly covered with grass and brush with some trees scattered throughout. Bedrock outcrops are widely present in the northwest portion of the site as well as at the east side of the intersection of King Street and Cooney Hill Road. Active pumping wells are present in the area with associated utilities running to a water treatment plant on the southern end of the site. The northern site was previously occupied by single family residential homes, however, around 2005 the residential homes were demolished.

PROPOSED CONSTRUCTION

We understand that the planned construction will consist of 30 town home units. Site developments will also include new asphalt paved parking lots and driveways, utilities, new stormwater management systems. The following evaluation is based on information that has been provided to our office as of the date of this report. Once the planned construction has been further completed, a copy of the final plans should be forwarded to our office so that we can review it along with the recommendations in this report. At that time, any changes or additional recommendations can be provided, if required.

SUBSURFACE CONDITIONS

To determine the subsurface soil and groundwater conditions at the site, a subsurface investigation consisting of nine (9) test borings and twenty four (24) test pits were completed in December 2021 under the full-time inspection of Carlin-Simpson & Associates. Detailed boring and test pit logs have been prepared and are included in this report. Our field engineer visually identified all of the soil samples obtained during the boring and test pit operations.

The summary of the boring and test pit observations are located in Tables 1 below. The following information is based on the data collected during the recent subsurface soil and groundwater investigation performed in December 2021.

Groundwater

During the subsurface investigation, groundwater was encountered in borings B-G, B-H, and B-I and test pit TP-S at depths ranging from 6'9" to 11'9" below existing ground surface (approximate elevations ranging from +404.3.0 to +428.0). Saturated soil samples were encountered in boring B-C, B-D and B-F at a depth of 10'0" below existing ground surface. This correlates to elevations of +400.0, +398.0, and +404.0 in borings B-C, B-D, and B-F, respectively. Trapped or perched groundwater was encountered in the existing fill or on the bedrock surface in test pits TP-N, TP-308, and TP-311 at depths ranging from 1'0" to 7'3" below existing ground surface elevation (approximate elevations ranging from +403.0 to +444.0).

Groundwater on the subject site will be controlled by the topography and the underlying bedrock surface. As surface water infiltrates the ground, the water will travel along the soil/rock interface and through fractures in the bedrock. Additional perched or trapped ground water be may be encountered in the existing fill, especially during wet periods. Variations in the location of the long-term water table may occur as a result of changes in precipitation, evaporation, surface water runoff, and other factors not immediately apparent at the time of this exploration.

No evidence of seasonal high ground water (ie. mottling) was encountered during our subsurface investigation.

Bedrock

Based on our experience and the boring and test pit observations, the in-situ bedrock at the site will range from completely weathered rock in a soil-like state, to unrippable bedrock. The rock generally transitions into harder, more intact, bedrock with increasing depth. The completely to highly weathered rock was encountered at depths ranging from 3'6" to 9'9" below the ground surface (elevations +404.5 to +445.3). Auger or bucket refusal on harder bedrock was encountered at depths ranging from 1'0" to 9'6" below the existing ground surface (elevation +399.5 to +458.8). The bedrock observations are summarized in Table 1 below.

A summary of boring and test pit observations is summarized in Table 1 below.

Table 1 – Summary of Boring and Test Pit Observations

Boring / Test Pit No.	Approximate Existing Ground Surface Elevation	Depth to Bottom of Existing Fill	Depth to Groundwater (Elevation)	Depth to Bedrock (Elevation)

NE - Not Encountered

NWE - No Groundwater Encountered

AR - Auger Refusal on Possible Bedrock

BR - Bucket Refusal on Bedrock - unrippable

HW - Weathered Bedrock – ripplable

CWR - Completely Weathered Bedrock - ripplable

(S) - Saturated Soil

(P) - Perched Groundwater in existing fill or on bedrock surface

Stormwater Management Systems

We understand that the planned construction will include new stormwater management systems that include stormwater basins and subsurface infiltration system. During this study, nine (9) test borings and fourteen (14) test pits were performed to determine the subsurface soil conditions and depth to groundwater within the proposed stormwater system areas. Test borings B-A through B-I were performed for three stormwater basins and subsurface infiltration systems in the southern portion of the site. Test pits TP-J through TP-V were performed for stormwater basins located in the northern side of the site. The proposed stormwater management systems have an invert elevation ranging from +400 to +418.0. Infiltration tests were eliminated due to shallow bedrock or deep existing fill at test

pit locations TP-M, TP-N, TP-T, TP-TA, TP-U, and TP-V and boring location B-I. The results of the boring and test pits observations are summarized in Table 1 above.

Borings B-C and B-D were completed for a potential subsurface stormwater system with bottom of system at +402.0. During the soil sampling, very moist to saturated soil samples were obtained at a depth of 10 to 14 feet below existing ground surface. Upon the completion of the boring, a ground water reading was taken, which indicated no signs of static groundwater. The presence of saturated soil samples and the lack of physical groundwater is an indication of a saturated zone of soil (ie. possibly perched groundwater). The top of the saturated zone in boring B-C and B-D is 10'0" below existing ground surface. This correlates to approximate elevations +400.0 and +398.0 in boring B-C and B-D, respectively.

Borings B-G and B-F were completed for a potential stormwater management area with a bottom of system elevation of +404.0. Upon completion of the borings, groundwater in boring B-G was measured to be 11'9" below existing ground surface (approximate elevation +404.3). Groundwater was not encountered in boring B-F to a depth of 15'5" below existing ground surface (approximate elevation +398.5). As a result, the infiltration test for B-F was installed at a depth of 12'0" below existing ground surface (approximate elevation +402.0). The infiltration rate at boring location B-F was measured to be 0.0 in/hr. We believe that the test was installed in a saturated zone of soil that resulted in a low infiltration rate. In addition, if the test were performed above the saturated zone then we would expect similar infiltration rates to that of boring location B-G.

During this study, sixteen (16) infiltration tests were performed in the proposed stormwater management areas. The infiltration tests were performed in accordance with NYSDEC procedures. The results of infiltration tests that were performed are summarized in Table 2 below. The vertical permeability rate (K_m) was also calculated using the equation below.

$$K_m = 1.142R_t \times \frac{\left[\ln \left(\frac{h_1}{h_2} \right) \right]}{(t_2 - t_1)}$$

Should stormwater management areas be planned in other portions of the property, they should be evaluated on a case-by-case basis. The stormwater management systems must be designed in accordance with the applicable New York State Department of Environmental Conservation (NYSDEC) regulations and the New York State Stormwater Management Design Manual (August 2010). The testing requirements are outlined in Appendix D of the manual.

Table 2 – Stormwater Infiltration Test Results

Boring / Test Pit No.	Existing Ground Surface Elevation	Test Depth (Elevation)	Infiltration Rate (in/hr)	Calculated Vertical Permeability K_m (in/hr)

GENERAL

The findings, conclusions and recommendations presented in this report represent our professional opinions concerning subsurface conditions at the site. The opinions presented are relative to the dates of our site work and should not be relied on to represent conditions at later dates or at locations not explored. The opinions included herein are based on information provided to us, the data obtained at specific locations during the study and our past experience. If additional information becomes available that might impact our geotechnical opinions, it will be necessary for Carlin-Simpson & Associates to review the information, reassess the potential concerns, and re-evaluate our conclusions and recommendations.

Regardless of the thoroughness of a geotechnical exploration, there is the possibility that conditions between borings and test pits will differ from those encountered at specific boring or test pit locations, that conditions are not as anticipated by the designers and/or the contractors, or that either natural events or the construction process have altered the subsurface conditions. These variations are an inherent risk associated with subsurface conditions in this region and the approximate methods used to obtain the data. These variations may not be apparent until construction.

This report has been prepared in accordance with generally accepted geotechnical engineering practice. No other warranty is expressed or implied. The evaluations and recommendations presented in this report are based on the available project information, as well as on the results of the exploration. Carlin-Simpson & Associates should be given the opportunity to review the final drawings and site plans for this project to determine if changes to the recommendations outlined in this report are needed. Should the nature of the project change, these recommendations should be re-evaluated.

This report is provided for the exclusive use of Toll Brothers and the project specific design team and may not be used or relied upon in connection with other projects or by other third parties. Carlin-Simpson & Associates disclaims liability for any such third party use or reliance without express written permission. Use of this report or the findings, conclusions or recommendations by others will be at the sole risk of the user. Carlin-Simpson & Associates is not responsible or liable for the interpretation by others of the data in this report, nor their conclusions, recommendations or opinions.

If the conditions encountered during construction vary significantly from those stated in this report, this office should be notified immediately so that additional recommendations can be made.

Thank you for allowing us to assist you with this project. Should you have any questions or comments, please contact this office.

Very truly yours,

CARLIN-SIMPSON & ASSOCIATES

Michal Wroblewski, E.I.T.
Project Manager

ROBERT B. SIMPSON, P.E.

APPENDIX G

SEDIMENT BASIN CALCULATIONS

TEMPORARY SEDIMENT BASIN DESIGN DATA SHEET

Computed by _____ Date _____ Checked by _____ Date _____
Project _____ Basin # _____
Location _____ Total Area draining to basin (≤ 50 Ac.) _____ Acres

BASIN SIZE DESIGN

1. Sediment storage zone volume = 1,000 cu. ft. x number of disturbed acres = _____ cu. ft., Top of Zone Elev. _____
2. Dewatering zone volume = 3,600 cu. ft. x number of drainage area acres = _____ cu. ft., Top of Zone Elev. _____
3. Length to width ratio = _____
4. A. Cleanout at 50% of sediment storage zone volume, Elev. _____
B. Distance below top of riser _____ feet
5. Minimum surface area is larger of $0.01 Q_{(10)}$ _____ or, $0.015 DA$ = _____ use _____ acres

DESIGN OF SPILLWAYS & ELEVATIONS

Runoff

6. $Q_{p(10)}$ = _____ cfs (Attach runoff computation sheets)

Pipe Spillway (Q_{ps})

7. Min. pipe spillway cap., $Q_{ps} = 0.2 \times$ _____ Drainage Area, acres = _____ cfs
Note: If there is no emergency spillway, then required $Q_{ps} = Q_{p(10)}$ = _____ cfs.
8. H, head = _____ ft. Barrel length = _____ ft
9. Barrel: Diam. _____ inches; $Q_{ps} = (Q)$ _____ x (cor.fac.) _____ = _____ cfs.
10. Riser: Diam. _____ inches; Length _____ ft.; h = _____ ft. Crest Elev. _____
11. Trash Rack: Diameter = _____ inches; H, height = _____ inches

Emergency Spillway Design

12. Emergency Spillway Flow, $Q_{es} = Q_p - Q_{ps} =$ _____ - _____ = _____ cfs.
13. Width _____ ft.; H_p _____ ft. Crest elevation _____; Design High Water Elev. _____
Entrance channel slope _____ % ; Top of Dam Elev. _____
Exit channel slope _____ %

ANTI-SEEP COLLAR/SEEPAGE DIAPHRAGM DESIGN

Collars:

14. $y =$ _____ ft.; $z =$ _____ :1; pipe slope = _____ %, $L_s =$ _____ ft.
Use _____ collars, _____ - _____ inches square; projection = _____ ft.

Diaphragms:

_____ width _____ ft. height _____ ft.

DEWATERING ORIFICE SIZING

(Determined from the Dewatering Device Standard)

15. Dewatering orifice diameter = _____ inches. Skimmer ____ or Riser ____ (check one)
16. Design dewatering time _____ days (Min. 2 days required)

APPENDIX H

STORMTECH DESIGN MANUAL AND ISOLATOR ROW O&M MANUAL

STORMTECH SC-740 CHAMBER

Designed to meet the most stringent industry performance standards for superior structural integrity while providing designers with a cost-effective method to save valuable land and protect water resources. The StormTech system is designed primarily to be used under parking lots, thus maximizing land usage for private (commercial) and public applications. StormTech chambers can also be used in conjunction with Green Infrastructure, thus enhancing the performance and extending the service life of these practices.

STORMTECH SC-740 CHAMBER (not to scale)

Nominal Chamber Specifications

Size (L x W x H)

85.4" x 51" x 30"

2,170 mm x 1,295 mm x 762 mm

Chamber Storage

45.9 ft³ (1.30 m³)

Min. Installed Storage*

74.9 ft³ (2.12 m³)

Weight

74.0 lbs (33.6 kg)

Shipping

30 chambers/pallet

60 end caps/pallet

12 pallets/truck

*Assumes 6" (150 mm) stone above, below and between chambers and 40% stone porosity.

SC-740 CUMULATIVE STORAGE VOLUMES PER CHAMBER

Assumes 40% Stone Porosity. Calculations are Based Upon a 6" (150 mm) Stone Base Under Chambers.

Depth of Water in System Inches (mm)	Cumulative Chamber Storage ft ³ (m ³)	Total System Cumulative Storage ft ³ (m ³)
42 (1067)	45.90 (1.300)	74.90 (2.121)
41 (1041)	45.90 (1.300)	73.77 (2.089)

12 (305)	12.97 (0.367)	21.31 (0.608)
11 (279)	10.87 (0.309)	18.92 (0.535)
10 (254)	8.74 (0.247)	16.51 (0.468)
9 (229)	6.58 (0.186)	14.09 (0.399)
8 (203)	4.41 (0.125)	11.66 (0.330)
7 (178)	2.21 (0.063)	9.21 (0.264)
6 (152)	0 (0)	6.76 (0.191)
5 (127)	0 (0)	5.63 (0.160)
4 (102)	0 (0)	4.51 (0.128)
3 (76)	0 (0)	3.38 (0.096)
2 (51)	0 (0)	2.25 (0.064)
1 (25)	0 (0)	1.13 (0.032)

Note: Add 1.13 ft³ (0.032 m³) of storage for each additional inch (25 mm) of stone foundation.

STORAGE VOLUME PER CHAMBER FT³ (M³)

	Bare Chamber Storage ft ³ (m ³)	Chamber and Stone Foundation Depth in. (mm)		
		6 (150)	12 (300)	18 (450)
SC-740 Chamber	45.9 (1.3)	74.9 (2.1)	81.7 (2.3)	88.4 (2.5)

Note: Assumes 6" (150 mm) stone above chambers, 6" (150 mm) row spacing and 40% stone porosity.

AMOUNT OF STONE PER CHAMBER

ENGLISH TONS (yds ³)	Stone Foundation Depth		
	6"	12"	16"
SC-740	3.8 (2.8)	4.6 (3.3)	5.5 (3.9)
METRIC KILOGRAMS (m ³)	150 mm	300 mm	450 mm
SC-740	3,450 (2.1)	4,170 (2.5)	4,490 (3.0)

Note: Assumes 6" (150 mm) of stone above and between chambers.

VOLUME EXCAVATION PER CHAMBER YD³ (M³)

	Stone Foundation Depth		
	6 (150)	12 (300)	18 (450)
SC-740	5.5 (4.2)	6.2 (4.7)	6.8 (5.2)

Note: Assumes 6" (150 mm) of row separation and 18" (450 mm) of cover. The volume of excavation will vary as depth of cover increases.

THE MOST **ADVANCED** NAME IN WATER MANAGEMENT SOLUTIONS™

ACCEPTABLE FILL MATERIALS: STORMTECH SC-740 CHAMBER SYSTEMS

MATERIAL LOCATION		DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	FINAL FILL: FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER.	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	INITIAL FILL: FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 18" (450 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145 ¹ A-1, A-2-4, A-3 OR AASHTO M43 ¹ 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 12" (300 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 6" (150 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS. ROLLER GROSS VEHICLE WEIGHT NOT TO EXCEED 12,000 lbs (53 kN). DYNAMIC FORCE NOT TO EXCEED 20,000 lbs (89 kN).
B	EMBEDMENT STONE: FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43 ¹ 3, 357, 4, 467, 5, 56, 57	NO COMPACTION REQUIRED.
A	FOUNDATION STONE: FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43 ¹ 3, 357, 4, 467, 5, 56, 57	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE. ^{2,3}

- PLEASE NOTE:
- THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
 - STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 6" (150 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
 - WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
 - ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.

NOTES:

- CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418-16a, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
- SC-740 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
- THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
- PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
- REQUIREMENTS FOR HANDLING AND INSTALLATION:
 - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
 - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 2".
 - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 550 LBS/IN/IN. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

THE ISOLATOR® ROW PLUS

INTRODUCTION

An important component of any Stormwater Pollution Prevention Plan is inspection and maintenance. The StormTech Isolator Row PLUS is a technique to inexpensively enhance Total Suspended Solids (TSS) and Total Phosphorus (TP) removal with easy access for inspection and maintenance.

THE ISOLATOR ROW PLUS

The Isolator Row PLUS is a row of StormTech chambers, either SC-160, SC-310, SC-310-3, SC-740, DC-780, MC-3500 or MC-4500 models, that is surrounded with filter fabric and connected to a closely located manhole for easy access. The fabric-wrapped chambers provide for settling and filtration of sediment as storm water rises in the Isolator Row PLUS and ultimately passes through the filter fabric. The open bottom chambers and perforated sidewalls (SC-310, SC-310-3 and SC-740 models) allow storm water to flow both vertically and horizontally out of the chambers. Sediments are captured in the Isolator Row PLUS protecting the storage areas of the adjacent stone and chambers from sediment accumulation.

ADS geotextile fabric is placed between the stone and the Isolator Row PLUS chambers. The woven geotextile provides a media for stormwater filtration, a durable surface for maintenance, prevents scour of the underlying stone and remains intact during high pressure jetting. A non-woven fabric is placed over the chambers to provide a filter media for flows passing through the perforations in the sidewall of the chamber. The non-woven fabric is not required over the SC-160, DC-780, MC-3500 or MC-4500 models as these chambers do not have perforated side walls.

The Isolator Row PLUS is designed to capture the “first flush” runoff and offers the versatility to be sized on a volume basis or a flow-rate basis. An upstream manhole not only provides access to the Isolator Row PLUS but includes a high/low concept such that stormwater flow rates or volumes that exceed the capacity of the Isolator Row PLUS bypass through a manifold to the other chambers. This is achieved with either an elevated bypass manifold or a high-flow weir. This creates a differential between the Isolator Row PLUS row of chambers and the manifold to the rest of the system, thus allowing for settlement time in the Isolator Row PLUS. After Stormwater flows through the Isolator Row PLUS and into the rest of the StormTech chamber system it is either exfiltrated into the soils below or passed at a controlled rate through an outlet manifold and outlet control structure.

The Isolator Row FLAMP™ (patent pending) is a flared end ramp apparatus that is attached to the inlet pipe on the inside of the chamber end cap. The FLAMP provides a smooth transition from pipe invert to fabric bottom. It is configured to improve chamber function performance over time by enhancing outflow of solid debris that would otherwise collect at an end of the chamber. It also serves to improve the fluid and solid flow into the access pipe during maintenance and cleaning and to guide cleaning and inspection equipment back into the inlet pipe when complete.

The Isolator Row PLUS may be part of a treatment train system. The design of the treatment train and selection of pretreatment devices by the design engineer is often driven by regulatory requirements. Whether pretreatment is used or not, the Isolator Row PLUS is recommended by StormTech as an effective means to minimize maintenance requirements and maintenance costs.

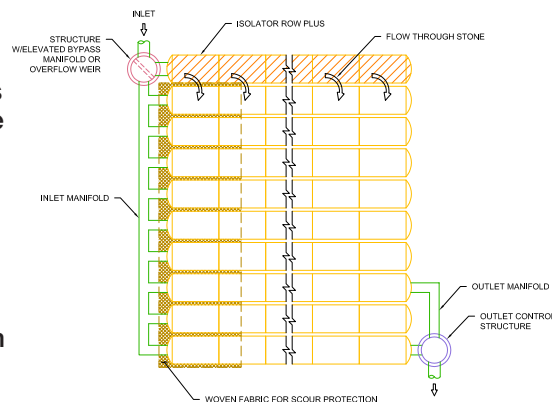

Note: See the StormTech Design Manual for detailed information on designing inlets for a StormTech system, including the Isolator Row PLUS.

Looking down the Isolator Row PLUS from the manhole opening, ADS PLUS Fabric is shown between the chamber and stone base.

StormTech Isolator Row PLUS with Overflow Spillway (not to scale)

ISOLATOR ROW PLUS INSPECTION/MAINTENANCE

INSPECTION

The frequency of inspection and maintenance varies by location. A routine inspection schedule needs to be established for each individual location based upon site specific variables. The type of land use (i.e. industrial, commercial, residential), anticipated pollutant load, percent imperviousness, climate, etc. all play a critical role in determining the actual frequency of inspection and maintenance practices.

At a minimum, StormTech recommends annual inspections. Initially, the Isolator Row PLUS should be inspected every 6 months for the first year of operation. For subsequent years, the inspection should be adjusted based upon previous observation of sediment deposition.

The Isolator Row PLUS incorporates a combination of standard manhole(s) and strategically located inspection ports (as needed). The inspection ports allow for easy access to the system from the surface, eliminating the need to perform a confined space entry for inspection purposes.

If upon visual inspection it is found that sediment has accumulated, a stadia rod should be inserted to determine the depth of sediment. When the average depth of sediment exceeds 3 inches throughout the length of the Isolator Row PLUS, clean-out should be performed.

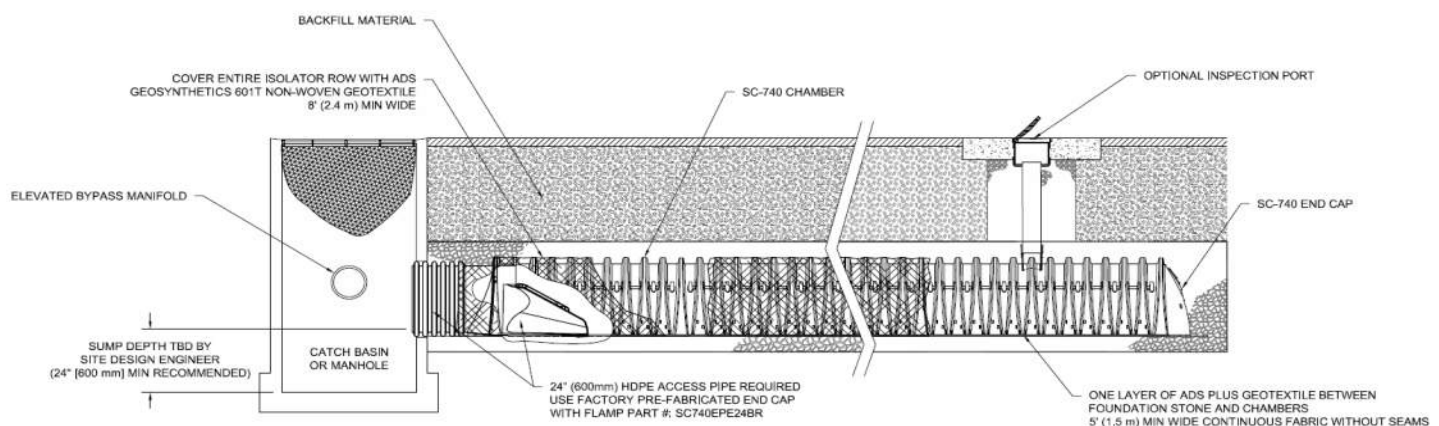

MAINTENANCE

The Isolator Row PLUS was designed to reduce the cost of periodic maintenance. By “isolating” sediments to just one row, costs are dramatically reduced by eliminating the need to clean out each row of the entire storage bed. If inspection indicates the potential need for maintenance, access is provided via a manhole(s) located on the end(s) of the row for cleanout. If entry into the manhole is required, please follow local and OSHA rules for a confined space entries.

Maintenance is accomplished with the JetVac process. The JetVac process utilizes a high pressure water nozzle to propel itself down the Isolator Row PLUS while scouring and suspending sediments. As the nozzle is retrieved, the captured pollutants are flushed back into the manhole for vacuuming. Most sewer and pipe maintenance companies have vacuum/JetVac combination vehicles. Selection of an appropriate JetVac nozzle will improve maintenance efficiency. Fixed nozzles designed for culverts or large diameter pipe cleaning are preferable. Rear facing jets with an effective spread of at least 45° are best. StormTech recommends a maximum nozzle pressure of 2000 psi be utilized during cleaning. Most JetVac reels have 400 feet of hose allowing maintenance of an Isolator Row PLUS up to 50 chambers long. **The JetVac process shall only be performed on StormTech Isolator Row PLUS that have ADS PLUS Fabric (as specified by StormTech) over their angular base stone.**

StormTech Isolator Row PLUS (not to scale)

Note: Non-woven fabric is only required over the inlet pipe connection into the end cap for SC-160LP, DC-780, MC-3500 and MC-4500 chamber models and is not required over the entire Isolator Row PLUS.

ISOLATOR ROW PLUS STEP BY STEP MAINTENANCE PROCEDURES

STEP 1

Inspect Isolator Row PLUS for sediment.

- A) Inspection ports (if present)
 - i. Remove lid from floor box frame
 - ii. Remove cap from inspection riser
 - iii. Using a flashlight and stadia rod, measure depth of sediment and record results on maintenance log.
 - iv. If sediment is at or above 3 inch depth, proceed to Step 2. If not, proceed to Step 3.
- B) All Isolator Row PLUS
 - i. Remove cover from manhole at upstream end of Isolator Row PLUS
 - ii. Using a flashlight, inspect down Isolator Row PLUS through outlet pipe
 - 1. Mirrors on poles or cameras may be used to avoid a confined space entry
 - 2. Follow OSHA regulations for confined space entry if entering manhole
 - iii. If sediment is at or above the lower row of sidewall holes (approximately 3 inches), proceed to Step 2. If not, proceed to Step 3.

STEP 2

Clean out Isolator Row PLUS using the JetVac process.

- A) A fixed floor cleaning nozzle with rear facing nozzle spread of 45 inches or more is preferable
- B) Apply multiple passes of JetVac until backflush water is clean
- C) Vacuum manhole sump as required

STEP 3

Replace all caps, lids and covers, record observations and actions.

STEP 4

Inspect & clean catch basins and manholes upstream of the StormTech system.

SAMPLE MAINTENANCE LOG

Date	Stadia Rod Readings		Sediment Depth (1)-(2)	Observations/Actions	Inspector
	Fixed point to chamber bottom (1)	Fixed point to top of sediment (2)			
3/15/11	6.3 ft	none		New installation. Fixed point is CI frame at grade	DJM
9/24/11		6.2	0.1 ft	Some grit felt	SM
6/20/13		5.8	0.5 ft	Mucky feel, debris visible in manhole and in Isolator Row PLUS, maintenance due	NV
7/7/13	6.3 ft		0	System jetted and vacuumed	DJM

StormTech Construction Guide

REQUIRED MATERIALS AND EQUIPMENT LIST

- Acceptable fill materials per Table 1
- ADS Plus and non-woven geotextile fabrics
- StormTech solid end caps and pre-cored end caps
- StormTech chambers
- StormTech manifolds and fittings

IMPORTANT NOTES:

A. This installation guide provides the minimum requirements for proper installation of chambers. Non-adherence to this guide may result in damage to chambers during installation. Replacement of damaged chambers during or after backfilling is costly and very time consuming. It is recommended that all installers are familiar with this guide, and that the contractor inspects the chambers for distortion, damage and joint integrity as work progresses.

B. Use of a dozer to push embedment stone between the rows of chambers may cause damage to chambers and is not an acceptable backfill method. Any chambers damaged by using the “dump and push” method are not covered under the StormTech standard warranty.

C. Care should be taken in the handling of chambers and end caps. Avoid dropping, prying or excessive force on chambers during removal from pallet and initial placement.

Requirements for System Installation

Excavate bed and prepare subgrade per engineer's plans.

Place non-woven geotextile over prepared soils and up excavation walls. Install underdrains if required.

Place clean, crushed, angular stone foundation 6" (150 mm) min. Compact to achieve a flat surface.

Manifold, Scour Fabric and Chamber Assembly

Install manifolds and lay out ADS PLUS fabric at inlet rows [min. 12.5 ft (3.8 m)] at each inlet end cap. Place a continuous piece along entire length of Isolator® PLUS Row(s).

Align the first chamber and end cap of each row with inlet pipes. Contractor may choose to postpone stone placement around end chambers and leave ends of rows open for easy inspection of chambers during the backfill process.

Continue installing chambers by overlapping chamber end corrugations. Chamber joints are labeled “Lower Joint – Overlap Here” and “Build this direction – Upper Joint” Be sure that the chamber placement does not exceed the reach of the construction equipment used to place the stone. Maintain minimum 6” (150 mm) spacing between rows.

Attaching the End Caps

Lift the end of the chamber a few inches off the ground. With the curved face of the end cap facing outward, place the end cap into the chamber's end corrugation.

Prefabricated End Caps

24” (600 mm) inlets are the maximum size that can fit into a SC-740/DC-780 end cap and must be prefabricated with a 24” (600 mm) pipe stub. SC-310 chambers with a 12” (300 mm) inlet pipe must use a prefabricated end cap with a 12” (300 mm) pipe stub. When used on an Isolator Row PLUS, these end caps will contain a welded FLAMP (flared end ramp) that will lay on top of the ADS PLUS fabric (shown above)

Isolator Row PLUS

Place a continuous layer of ADS PLUS fabric between the foundation stone and the Isolator Row PLUS chambers, making sure the fabric lays flat and extends the entire width of the chamber feet. Drape a strip of ADS non-woven geotextile over the row of chambers (not required over DC-780). This is the same type of non-woven geotextile used as a separation layer around the angular stone of the StormTech system.

Initial Anchoring of Chambers – Embedment Stone

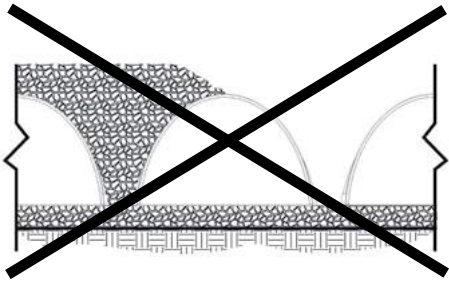

Initial embedment shall be spotted along the centerline of the chamber evenly anchoring the lower portion of the chamber. This is best accomplished with a stone conveyor or excavator reaching along the row.

No equipment shall be operated on the bed at this stage of the installation. Excavators must be located off the bed. Dump trucks shall not dump stone directly on to the bed. Dozers or loaders are not allowed on the bed at this time.

Backfill of Chambers – Embedment Stone

UNEVEN BACKFILL

EVEN BACKFILL

PERIMETER NOT BACKFILLED

PERIMETER FULLY BACKFILLED

Backfill chambers evenly. Stone column height should never differ by more than 12" (300 mm) between adjacent chamber rows or between chamber rows and perimeter.

Perimeter stone must be brought up evenly with chamber rows. Perimeter must be fully backfilled, with stone extended horizontally to the excavation wall.

Backfill - Embedment Stone & Cover Stone

Continue evenly backfilling between rows and around perimeter until embedment stone reaches tops of chambers. Perimeter stone must extend horizontally to the excavation wall for both straight or sloped sidewalls. **Only after chambers have been backfilled to top of chamber and with a minimum 6" (150 mm) of cover stone on top of chambers can small dozers be used over the chambers for backfilling remaining cover stone.**

Small dozers and skid loaders may be used to finish grading stone backfill in accordance with ground pressure limits in Table 2. They must push material parallel to rows only. Never push perpendicular to rows. StormTech recommends that the contractor inspect chambers before placing final backfill. Any chambers damaged by construction shall be removed and replaced.

Inserta Tee Detail

NOTE:
PART NUMBERS WILL VARY BASED ON INLET PIPE MATERIALS. CONTACT STORMTECH FOR MORE INFORMATION.

CHAMBER	MAX DIAMETER OF INSERTA TEE	HEIGHT FROM BASE OF CHAMBER (X)
SC-310	6" (150 mm)	4" (100 mm)
SC-740	10" (250 mm)	4" (100 mm)
DC-780	10" (250 mm)	4" (100 mm)

INSERTA TEE FITTINGS AVAILABLE FOR SDR 26, SDR 36, SCH 40 IPS GASKETED & SOLVENT WELD, N-12, HP STORM, C-900 OR DUCTILE IRON.

Final Backfill of Chambers – Fill Material

Install non-woven geotextile over stone. Geotextile must overlap 24" (600 mm) min. where edges meet. Compact each lift of backfill as specified in the site design engineer's drawings. Roller travel parallel with rows.

StormTech Isolator Row PLUS Detail

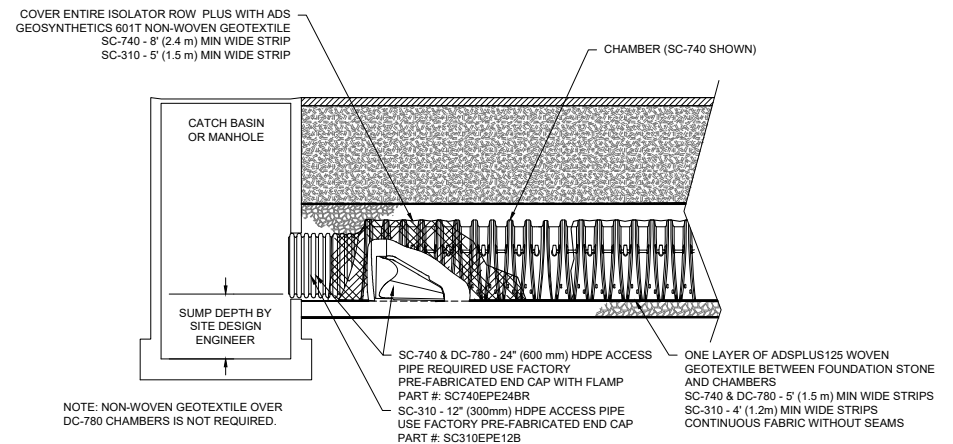

Table 1- Acceptable Fill Materials

Material Location	Description	AASHTO M43 Designation ¹	Compaction/Density Requirement
(D) Final Fill: Fill Material for layer 'D' starts from the top of the 'C' layer to the bottom of flexible pavement or unpaved finished grade above. Note that the pavement subbase may be part of the 'D' layer.	Any soil/rock materials, native soils or per engineer's plans. Check plans for pavement subgrade requirements.	N/A	Prepare per site design engineer's plans. Paved installations may have stringent material and preparation requirements.
(C) Initial Fill: Fill Material for layer 'C' starts from the top of the embedment stone ('B' layer) to 18" (450 mm) above the top of the chamber. Note that pavement subbase may be part of the 'C' layer.	Granular well-graded soil/aggregate mixtures, <35% fines or processed aggregate. Most pavement subbase materials can be used in lieu of this layer.	AASHTO M45 A-1, A-2-4, A-3 or AASHTO M431 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	Begin compaction after min. 12" (300 mm) of material over the chambers is reached. Compact additional layers in 6" (150 mm) max. lifts to a min. 95% Proctor density for well-graded material and 95% relative density for processed aggregate materials. Roller gross vehicle weight not to exceed 12,000 lbs (53 kN). Dynamic force not to exceed 20,000 lbs (89 kN).
(B) Embedment Stone: Embedment Stone surrounding chambers from the foundation stone to the 'C' layer above.	Clean, crushed, angular stone	AASHTO M43 ¹ 3, 357, 4, 467, 5, 56, 57	No compaction required.
(A) Foundation Stone: Foundation Stone below the chambers from the subgrade up to the foot (bottom) of the chamber.	Clean, crushed, angular stone,	AASHTO M43 ¹ 3, 357, 4, 467, 5, 56, 57	Place and compact in 6" (150 mm) lifts using two full coverages with a vibratory compactor. ^{2,3}

PLEASE NOTE:

- The listed AASHTO designations are for gradations only. The stone must also be clean, crushed, angular. For example, a specification for #4 stone would state: "clean, crushed, angular no. 4 (AASHTO M43) stone".*
- StormTech compaction requirements are met for 'A' location materials when placed and compacted in 6" (150 mm) (max) lifts using two full coverages with a vibratory compactor.*
- Where infiltration surfaces may be comprised by compaction, for standard installations and standard design load conditions, a flat surface may be achieved by raking or dragging without compaction equipment. For special load designs, contact StormTech for compaction requirements.*

Figure 1- Inspection Port Detail

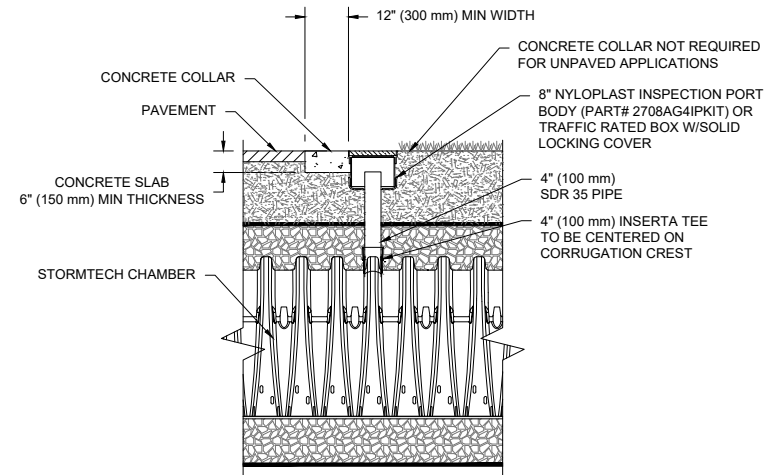

Figure 2 - Fill Material Locations

NOTES:

1. 36" (900 mm) of stabilized cover materials over the chambers is required for full dump truck travel and dumping.
2. During paving operations, dump truck axle loads on 18" (450 mm) of cover may be necessary. Precautions should be taken to avoid rutting of the road base layer, to ensure that compaction requirements have been met, and that a minimum of 18" (450 mm) of cover exists over the chambers. Contact StormTech for additional guidance on allowable axle loads during paving.
3. Ground pressure for track dozers is the vehicle operating weight divided by total ground contact area for both tracks. Excavators will exert higher ground pressures based on loaded bucket weight and boom extension.
4. Mini-excavators (< 8,000lbs/3,628 kg) can be used with at least 12" (300 mm) of stone over the chambers and are limited by the maximum ground pressures in Table 2 based on a full bucket at maximum boom extension.
5. Storage of materials such as construction materials, equipment, spoils, etc. should not be located over the StormTech system. The use of equipment over the StormTech system not covered in Table 2 (ex. soil mixing equipment, cranes, etc) is limited. Please contact StormTech for more information.
6. Allowable track loads based on vehicle travel only. Excavators shall not operate on chamber beds until the total backfill reaches 3 feet (900 mm) over the entire bed.

Table 3 - Placement Methods and Descriptions

Material Location	Placement Methods/ Restrictions	Wheel Load Restrictions	Track Load Restrictions	Roller Load Restrictions
		See Table 2 for Maximum Construction Loads		
D Final Fill Material	A variety of placement methods may be used. All construction loads must not exceed the maximum limits in Table 2.	36" (900 mm) minimum cover required for dump trucks to dump over chambers.	Dozers to push parallel to rows until 36" (900mm) compacted cover is reached. ⁴	Roller travel parallel to rows only until 36" (900 mm) compacted cover is reached.
C Initial Fill Material	Excavator positioned off bed recommended. Small excavator allowed over chambers. Small dozer allowed.	Asphalt can be dumped into paver when compacted pavement subbase reaches 18" (450 mm) above top of chambers.	Small LGP track dozers & skid loaders allowed to grade cover stone with at least 6" (150 mm) stone under tracks at all times. Equipment must push parallel to rows at all times.	Use dynamic force of roller only after compacted fill depth reaches 12" (300 mm) over chambers. Roller travel parallel to chamber rows only.
B Embedment Stone	No equipment allowed on bare chambers. Use excavator or stone conveyor positioned off bed or on foundation stone to evenly fill around all chambers to at least the top of chambers.	No wheel loads allowed. Material must be placed outside the limits of the chamber bed.	No tracked equipment is allowed on chambers until a min. 6" (150 mm) cover stone is in place.	No rollers allowed.
A Foundation Stone	No StormTech restrictions. Contractor responsible for any conditions or requirements by others relative to subgrade bearing capacity, dewatering or protection of subgrade.			

17.0 Standard Limited Warranty

STANDARD LIMITED WARRANTY OF STORMTECH LLC ("STORMTECH"): PRODUCTS

- (A) This Limited Warranty applies solely to the StormTech chambers and end plates manufactured by StormTech and sold to the original purchaser (the "Purchaser"). The chambers and end plates are collectively referred to as the "Products."
- (B) The structural integrity of the Products, when installed strictly in accordance with StormTech's written installation instructions at the time of installation, are warranted to the Purchaser against defective materials and workmanship for one (1) year from the date of purchase. Should a defect appear in the Limited Warranty period, the Purchaser shall provide StormTech with written notice of the alleged defect at StormTech's corporate headquarters within ten (10) days of the discovery of the defect. The notice shall describe the alleged defect in reasonable detail. StormTech agrees to supply replacements for those Products determined by StormTech to be defective and covered by this Limited Warranty. The supply of replacement products is the sole remedy of the Purchaser for breaches of this Limited Warranty. StormTech's liability specifically excludes the cost of removal and/or installation of the Products.
- (C) **THIS LIMITED WARRANTY IS EXCLUSIVE. THERE ARE NO OTHER WARRANTIES WITH RESPECT TO THE PRODUCTS, INCLUDING NO IMPLIED WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE.**
- (D) This Limited Warranty only applies to the Products when the Products are installed in a single layer. **UNDER NO CIRCUMSTANCES, SHALL THE PRODUCTS BE INSTALLED IN A MULTI-LAYER CONFIGURATION.**
- (E) No representative of StormTech has the authority to change this Limited Warranty in any manner or to extend this Limited Warranty. This Limited Warranty does not apply to any person other than to the Purchaser.
- (F) Under no circumstances shall StormTech be liable to the Purchaser or to any third party for product liability claims; claims arising from the design, shipment, or installation of the Products, or the cost of other goods or services related to the purchase and installation of the Products. For this Limited Warranty to apply, the Products must be installed in accordance with all site conditions required by state and local codes; all other applicable laws; and StormTech's written installation instructions.
- (G) **THE LIMITED WARRANTY DOES NOT EXTEND TO INCIDENTAL, CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES. STORMTECH SHALL NOT BE LIABLE FOR PENALTIES OR LIQUIDATED DAMAGES, INCLUDING LOSS OF PRODUCTION AND PROFITS; LABOR AND MATERIALS; OVERHEAD COSTS; OR OTHER LOSS OR EXPENSE INCURRED BY THE PURCHASER OR ANY THIRD PARTY. SPECIFICALLY EXCLUDED FROM LIMITED WARRANTY COVERAGE ARE DAMAGE TO THE PRODUCTS ARISING FROM ORDINARY WEAR AND TEAR; ALTERATION, ACCIDENT, MISUSE, ABUSE OR NEGLIGENCE; THE PRODUCTS BEING SUBJECTED TO VEHICLE TRAFFIC OR OTHER CONDITIONS WHICH ARE NOT PERMITTED BY STORMTECH'S WRITTEN SPECIFICATIONS OR INSTALLATION INSTRUCTIONS; FAILURE TO MAINTAIN THE MINIMUM GROUND COVERS SET FORTH IN THE INSTALLATION INSTRUCTIONS; THE PLACEMENT OF IMPROPER MATERIALS INTO THE PRODUCTS; FAILURE OF THE PRODUCTS DUE TO IMPROPER SITING OR IMPROPER SIZING; OR ANY OTHER EVENT NOT CAUSED BY STORMTECH. A PRODUCT ALSO IS EXCLUDED FROM LIMITED WARRANTY COVERAGE IF SUCH PRODUCT IS USED IN A PROJECT OR SYSTEM IN WHICH ANY GEOTEXTILE PRODUCTS OTHER THAN THOSE PROVIDED BY ADVANCED DRAINAGE SYSTEMS ARE USED. THIS LIMITED WARRANTY REPRESENTS STORMTECH'S SOLE LIABILITY TO THE PURCHASER FOR CLAIMS RELATED TO THE PRODUCTS, WHETHER THE CLAIM IS BASED UPON CONTRACT, TORT, OR OTHER LEGAL THEORY.**

ADS GEOSYNTHETICS 0601T NONWOVEN GEOTEXTILE

Scope

This specification describes ADS Geosynthetics 6.0 oz (0601T) nonwoven geotextile.

Filter Fabric Requirements

ADS Geosynthetics 6.0 oz (0601T) is a needle-punched nonwoven geotextile made of 100% polypropylene staple fibers, which are formed into a random network for dimensional stability. ADS Geosynthetics 6.0 oz (0601T) resists ultraviolet deterioration, rotting, biological degradation, naturally encountered basics and acids. Polypropylene is stable within a pH range of 2 to 13. ADS Geosynthetics 6.0 oz (0601T) conforms to the physical property values listed below:

Filter Fabric Properties

PROPERTY	TEST METHOD	UNIT	M.A.R.V. (Minimum Average Roll Value)
Weight (Typical)	ASTM D 5261	oz/yd ² (g/m ²)	6.0 (203)
Grab Tensile	ASTM D 4632	lbs (kN)	160 (0.711)
Grab Elongation	ASTM D 4632	%	50
Trapezoid Tear Strength	ASTM D 4533	lbs (kN)	60 (0.267)
CBR Puncture Resistance	ASTM D 6241	lbs (kN)	410 (1.82)
Permittivity*	ASTM D 4491	sec ⁻¹	1.5
Water Flow*	ASTM D 4491	gpm/ft ² (l/min/m ²)	110 (4480)
AOS*	ASTM D 4751	US Sieve (mm)	70 (0.212)
UV Resistance	ASTM D 4355	%/hrs	70/500

PACKAGING	
Roll Dimensions (W x L) – ft	12.5 x 360 / 15 x 300
Square Yards Per Roll	500
Estimated Roll Weight – lbs	195

* At the time of manufacturing. Handling may change these properties.

ADS GEOSYNTHETICS 315W WOVEN GEOTEXTILE

Scope

This specification describes ADS Geosynthetics 315W woven geotextile.

Filter Fabric Requirements

ADS Geosynthetics 315W is manufactured using high tenacity polypropylene yarns that are woven to form a dimensionally stable network, which allows the yarns to maintain their relative position. ADS Geosynthetics 315W resists ultraviolet deterioration, rotting and biological degradation and is inert to commonly encountered soil chemicals. ADS Geosynthetics 315W conforms to the physical property values listed below:

Filter Fabric Properties

PROPERTY	TEST METHOD	ENGLISH M.A.R.V. (Minimum Average Roll Value)	METRIC M.A.R.V. (Minimum Average Roll Value)
Tensile Strength (Grab)	ASTM D-4632	315 lbs	1400 N
Elongation	ASTM D-4632	15%	15%
CBR Puncture	ASTM D-6241	900 lbs	4005 N
Puncture	ASTM D-4833	150 lbs	667 N
Mullen Burst	ASTM D-3786	600 psi	4134 kPa
Trapezoidal Tear	ASTM D-4533	120 lbs	533 N
UV Resistance (at 500 hrs)	ASTM D-4355	70%	70%
Apparent Opening Size (AOS)*	ASTM D-4751	40 US Std. Sieve	0.425 mm
Permittivity	ASTM D-4491	.05 sec ⁻¹	.05 sec ⁻¹
Water Flow Rate	ASTM D-4491	4 gpm/ft ²	163 l/min/m ²
Roll Sizes		12.5' x 360' 15.0' x 300' 17.5' x 258'	3.81 m x 109.8 m 4.57 m x 91.5 m 5.33 m x 78.6 m

*Maximum average roll value.

APPENDIX I

TEMPORARY/PERMANENT EROSION AND SEDIMENT CONTROL INSPECTION AND MAINTENANCE CHECKLIST

Temporary Erosion and Sediment Control Inspection and Maintenance Checklist

Erosion and Sediment Control Measure	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Stabilized Construction Access	Daily	<ul style="list-style-type: none"> • Periodic top dressing with additional aggregate as required • Clean sediment in public right-of-ways immediately
Silt Fence	Weekly + After Each Rain	<ul style="list-style-type: none"> • Remove & redistribute sediment when bulges develop in the silt fence.
Inlet Protection	Weekly + After Each Rain	<ul style="list-style-type: none"> • Remove sediment as necessary and replace filter fabric, crushed stone etc. • Any broken and damaged components should be replaced. • Check all materials for proper anchorage and secure as necessary.
Temporary Swale	Weekly + After Each Rain	<ul style="list-style-type: none"> • Immediately remove any sediment and reestablish vegetative cover as required. • Inspect entire swale and surrounding area for rilling and repair as required with the placement of additional topsoil, then seeding and mulching, as outlined in Figure No. 5A.2 of the NYSDEC New York State Standards and Specifications for Erosion and Sediment Control.
Level Spreader	Weekly + After Each Rain	<ul style="list-style-type: none"> • Remove sediment accumulated as needed to ensure the level spreader operates properly and large flows are prevented from carrying sediment over the level lip. • Check for rilling within/around the level spreader and repair as required.

Temporary Erosion and Sediment Control Inspection and Maintenance Checklist
(Cont'd)

Erosion and Sediment Control Measure	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Temporary Sediment Basin	Weekly + After Each Rain	<ul style="list-style-type: none">• Remove and redistribute sediment when it reaches an elevation indicated on the construction documents.• Check for rilling within and around the sediment basin and repair as required.• Remove all sediment and debris from the outlet control structure as maybe required.
Stone Check Dam	Weekly + After Each Rain	<ul style="list-style-type: none">• Correct all damage immediately.• Notify design engineer if significant erosion has occurred between structures as a liner of stone or other suitable material maybe required in this section of the channel.• Remove sediment accumulated behind the dam as needed to allow the channel to drain through the stone check dam and prevent large flows from carrying sediment over the dam.• Replace stones as needed to maintain the design cross section of the structures.

Permanent Stormwater Management Practice Inspection and Maintenance Checklist

Stormwater Management Practice	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Vegetated Swale	Monthly	<ul style="list-style-type: none"> • Check that contributing area is clean of debris. • Confirm vegetation is adequately maintained (mowing, fertilizer, etc.) • Check for rilling/erosion and repair as needed. • Confirm dewatering occurs between storms.
Vegetated Swale/Open Channel/Level Spreader	Annually + After Major Storms	<ul style="list-style-type: none"> • Clean sediment and re-vegetate as necessary. • Check condition of outlet and repair as necessary
Rip-Rap Apron/Energy Dissipator and Check Dams	Annually + After Major Storms	<ul style="list-style-type: none"> • Check for evidence of flows going around the structure. • Check for evidence at downstream toe and repair as needed. • Clean sediment and install additional aggregate as necessary.
Stormwater Management Basin	Monthly	<ul style="list-style-type: none"> • Check Permanent Pool for undesirable vegetative growth and floatings or floatable debris. Remove as needed. • Check Forebays for sediment and cleanout when it depth <50% design depth. • Check Dry Pond areas for adequate vegetation, undesirable vegetative growth, low flow channels are clear of obstructions, standing water or wet spots and sediment and/or trash accumulation. Repair/remove as necessary.

Permanent Stormwater Management Practice Inspection and Maintenance Checklist (Cont'd)

Stormwater Management Practice	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Stormwater Management Basin	Annually + After Major Storms	<ul style="list-style-type: none"> • Check adequacy of vegetation and ground cover; for evidence of embankment erosion, animal burrows, unauthorized plantings and cracking, bulging or sliding of dam, clear/properly functioning drains, seeps/leaks on downstream face, failure of slope protection or riprap. Repair/remove as necessary. • Confirm emergency spillway is clear of obstructions and debris. • Confirm all inlets and outlet structures/pipes are operating properly.
Drain Inlets	Monthly	<ul style="list-style-type: none"> • Check for blockage and/or erosion at top of each inlet. Repair/remove as necessary. • Check for sediment and debris collected within sumps and clean out as necessary.
Water Quality Structure	(See Maintenance Guidelines in Appendix J)	<ul style="list-style-type: none"> • Open access cover for visual inspection and measure the distance from the standing water surface to the sediment pile with a measuring stick or tape. If less than 4 feet, insert hose from vacuum truck into the sump and screen through both access covers to clean out the standing water, layer of oil, sediment, trash, etc. • The screen must be powerwashed to ensure it is free of trash and debris.

Permanent Stormwater Management Practice Inspection and Maintenance Checklist (Cont'd)

Stormwater Management Practice	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Bioretention	Routine and As Needed	<ul style="list-style-type: none"> • Mowing-Frequency depends upon location and desired aesthetic appeal. • Watering-If droughty, watering after the initial year may be required. • Miscellaneous Upkeep-Tasks include trash collection, spot weeding, and removing mulch from overflow device.
	Semi-Annually	<ul style="list-style-type: none"> • Pruning -Nutrients in runoff often cause bioretention vegetation to flourish. • Mulching -Remulch bare areas with fresh mulch
	Annually	<ul style="list-style-type: none"> • Mulch Removal-Mulch accumulation reduces available water storage volume. Removal of mulch also increases surface infiltration rate of fill soil. • Remove and Replace Dead Plants- Within the first year, 10 percent of plants may die. Survival rates increase with time.

**Permanent Stormwater Management Practice Inspection and Maintenance
Checklist (Cont'd)**

Stormwater Management Practice	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
StormTech Subsurface Infiltration Facility	(See Maintenance Guidelines in Appendix H)	<ul style="list-style-type: none">• Check level of sediment accumulated within the isolator row through the access manhole. If 3 inches of sediment or greater, clean out utilizing a high pressure water nozzle to scour and suspend sediments.• Flush all sediment to access manhole and remove using a vacuum truck.

Hydro International plc has a policy of continuous product development and reserves the right to amend specifications without notice.

I. First Defense® by Hydro International

Introduction

The First Defense® is an enhanced vortex separator that combines an effective and economical stormwater treatment chamber with an integral peak flow bypass. It efficiently removes total suspended solids (TSS), trash and hydrocarbons from stormwater runoff without washing out previously captured pollutants. The First Defense® is available in several model configurations to accommodate a wide range of pipe sizes, peak flows and depth constraints.

The two product models described in this guide are the First Defense® High Capacity and the First Defense® Optimum; they are inspected and maintained identically.

Operation

The First Defense® operates on simple fluid hydraulics. It is self-activating, has no moving parts, no external power requirement and is fabricated with durable non-corrosive components. No manual procedures are required to operate the unit and maintenance is limited to monitoring accumulations of stored pollutants and periodic clean-outs. The First Defense® has been designed to allow for easy and safe access for inspection, monitoring and clean-out procedures. Neither entry into the unit nor removal of the internal components is necessary for maintenance, thus safety concerns related to confined-space-entry are avoided.

Pollutant Capture and Retention

The internal components of the First Defense® have been designed to optimize pollutant capture. Sediment is captured and retained in the base of the unit, while oil and floatables are stored on the water surface in the inner volume (Fig.1).

The pollutant storage volumes are isolated from the built-in bypass chamber to prevent washout during high-flow storm events. The sump of the First Defense® retains a standing water level between storm events. This ensures a quiescent flow regime at the onset of a storm, preventing resuspension and washout of pollutants captured during previous events.

Accessories such as oil absorbent pads are available for enhanced oil removal and storage. Due to the separation of the oil and floatable storage volume from the outlet, the potential for washout of stored pollutants between clean-outs is minimized.

Applications

- Stormwater treatment at the point of entry into the drainage line
- Sites constrained by space, topography or drainage profiles with limited slope and depth of cover
- Retrofit installations where stormwater treatment is placed on or tied into an existing storm drain line
- Pretreatment for filters, infiltration and storage

Advantages

- Inlet options include surface grate or multiple inlet pipes
- Integral high capacity bypass conveys large peak flows without the need for "offline" arrangements using separate junction manholes
- Long flow path through the device ensures a long residence time within the treatment chamber, enhancing pollutant settling
- Delivered to site pre-assembled and ready for installation

Fig.1 Pollutant storage volumes in the First Defense®.

II. Model Sizes & Configurations

The First Defense® inlet and internal bypass arrangements are available in several model sizes and configurations. The components have modified geometries allowing greater design flexibility to accommodate various site constraints.

All First Defense® models include the internal components that are designed to remove and retain total suspended solids (TSS), gross solids, floatable trash and hydrocarbons (Fig.2). First Defense® model sizes (diameter) are shown in Table 1.

10 / 3.0

Overview

The First Defense® protects the environment by removing a wide range of pollutants from stormwater runoff. Periodic removal of these captured pollutants is essential to the continuous, long-term functioning of the First Defense®. The First Defense® will capture and retain sediment and oil until the sediment and oil storage volumes are full to capacity. When sediment and oil storage capacities are reached, the First Defense® will no longer be able to store removed sediment and oil.

The First Defense® allows for easy and safe inspection, monitoring and clean-out procedures. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables. Access ports are located in the top of the manhole.

Maintenance events may include Inspection, Oil & Floatables Removal, and Sediment Removal. Maintenance events do not require entry into the First Defense®, nor do they require the internal components of the First Defense® to be removed. In the case of inspection and floatables removal, a vactor truck is not required. However, a vactor truck is required if the maintenance event is to include oil removal and/or sediment removal.

Maintenance Equipment Considerations

The internal components of the First Defense® have a centrally located circular shaft through which the sediment storage sump can be accessed with a sump vac hose. The open diameter of this access shaft is 15 inches in diameter (Fig.3). Therefore, the nozzle fitting of any vactor hose used for maintenance should be less than 15 inches in diameter.

Fig.3 The central opening to the sump of the First Defense® is 15 inches in diameter.

Determining Your Maintenance Schedule

The frequency of clean out is determined in the field after installation. During the first year of operation, the unit should be inspected every six months to determine the rate of sediment and floatables accumulation. A simple probe such as a Sludge-Judge® can be used to determine the level of accumulated solids stored in the sump. This information can be recorded in the maintenance log (see page 9) to establish a routine maintenance schedule.

The vactor procedure, including both sediment and oil / floatables removal, for First Defense® typically takes less than 30 minutes and removes a combined water/oil volume of about 765 gallons.

Inspection Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.
2. Remove the grate or lid to the manhole.
3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities. Fig.4 shows the standing water level that should be observed.
4. Without entering the vessel, use the pole with the skimmer net to remove floatables and loose debris from the components and water surface.
5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel.
6. On the Maintenance Log (see page 9), record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components or blockages.
7. Securely replace the grate or lid.
8. Take down safety equipment.
9. Notify Hydro International of any irregularities noted during inspection.

Floatables and Sediment Clean Out

Floatables clean out is typically done in conjunction with sediment removal. A commercially or municipally owned sump-vac is used to remove captured sediment and floatables (Fig.4).

Floatables and loose debris can also be netted with a skimmer and pole. The access port located at the top of the manhole provides unobstructed access for a vector hose to be lowered to the base of the sump.

Scheduling

- Floatables and sump clean out are typically conducted once a year during any season.
- Floatables and sump clean out should occur as soon as possible following a spill in the contributing drainage area.

Fig.4 Floatables are removed with a vector hose

Recommended Equipment

- Safety Equipment (traffic cones, etc)
- Crow bar or other tool to remove grate or lid
- Pole with skimmer or net (if only floatables are being removed)
- Sediment probe (such as a Sludge Judge®)
- Vector truck (flexible hose recommended)
- First Defense® Maintenance Log

Floatables and Sediment Clean Out Procedures

1. Set up any necessary safety equipment around the access port or grate of the First Defense® as stipulated by local ordinances. Safety equipment should notify passing pedestrian and road traffic that work is being done.
2. Remove the grate or lid to the manhole.
3. Without entering the vessel, look down into the chamber to inspect the inside. Make note of any irregularities.
4. Remove oil and floatables stored on the surface of the water with the vactor hose or with the skimmer or net
5. Using a sediment probe such as a Sludge Judge®, measure the depth of sediment that has collected in the sump of the vessel and record it in the Maintenance Log (page 9).
6. Once all floatables have been removed, drop the vactor hose to the base of the sump. Vactor out the sediment and gross debris off the sump floor
7. Retract the vactor hose from the vessel.
8. On the Maintenance Log provided by Hydro International, record the date, unit location, estimated volume of floatables and gross debris removed, and the depth of sediment measured. Also note any apparent irregularities such as damaged components, blockages, or irregularly high or low water levels.
9. Securely replace the grate or lid.

Maintenance at a Glance

Inspection	<ul style="list-style-type: none"> - Regularly during first year of installation - Every 6 months after the first year of installation
Oil and Floatables Removal	<ul style="list-style-type: none"> - Once per year, with sediment removal - Following a spill in the drainage area
Sediment Removal	<ul style="list-style-type: none"> - Once per year or as needed - Following a spill in the drainage area

NOTE: For most clean outs the entire volume of liquid does not need to be removed from the manhole. Only remove the first few inches of oils and floatables from the water surface to reduce the total volume of liquid removed during a clean out.

I. INTRODUCTION

As part of the proposed MBIA corporate headquarters expansion, the Town of North Castle Planning Board requested that MBIA provide details of MBIA's Integrated Pest Management (IPM) program. This program was implemented by MBIA in 2003 on its existing headquarters site (Figure 1), and will continue in the future to encompass the proposed MBIA expansion, as discussed in the project's accepted Final Environmental Impact Statement (FEIS), dated 09/2003.

The "Eighth Site Plan, Wetlands Permit and Tree Removal Permit Approvals" Resolution, dated 09/13/2004, Town of North Castle Planning Board (Appendix A), requested the following be provided regarding MBIA's IPM program:

The Applicant shall prepare a detailed Integrated Pest Management Plan to the satisfaction of the Town Planning Consultant demonstrating how each of the goals and objectives of the Integrated Pest Management plan described in the FEIS will be implemented. Specifically, the IPM shall address the following:

- MBIA will implement the IPM plan at both its existing headquarters site as well as the Cooney Hill lots.
- The health of landscape planting shall be assessed by a professional experienced in the practice of Integrated Pest Management.
- The IPM professional shall report any deterioration in the health of the landscaping or pest infestations and prescribe a remedial action program consistent with the most environmentally sensitive agents and maintenance as is practicable.
- Only low phosphorous fertilizers shall be used.
- Appropriate treatment measures will only be undertaken when weed and/or pest damage has exceeded established threshold levels - low priority area will tolerate 15% weeds or pest damage, medium priority area 10%, and high priority area 5%.

MBIA OFFICE EXPANSION

FIGURE: I.

- Except for ornamental and/or decorative landscaping and ground covers in the area immediately adjacent to the proposed Meeting House, refrain from use of pesticides, herbicides, or fertilizers in the drainage area that will discharge from PDA-2A and ultimately run into the Kensico reservoir unless such use is required to protect public health.
- In IPM Management Zone 1, there shall be no use of pesticides or fertilizers or herbicides.
- MBIA or its professional independent contractors shall prepare and submit annual reports to the Town, which will include periodic landscape inspection reports and a description of remedial action taken, by location, during the preceding year.

II. IPM SPECIALIST

The IPM specialist contracted by MBIA, Mr. Donald Gabel, has extensive theoretical and practical experience with IPM programs, as outlined below.

Mr. Gabel's educational background includes:

- A.A.S., Horticultural Science, SUNY Delhi
- Continuing Education:
 - New York Botanical Garden Continuing Education: Greenhouse Management; Rock Garden Construction; Economic Botany; and Propagation
 - Rutgers University: Urban Tree Management
 - Cornell Cooperative Extension: Pesticide Updates
 - Rockland Community College: Introduction to Computers
 - Cornell University: Field Diagnosis of Pests and Diseases; Urban Tree Establishment; Advanced Turf Grass Management Program
 - University of Maryland: Advanced Integrated Pest Management
 - AABGA: Advanced Bio-Control

Mr. Gabel's recent professional experience includes:

Integrated Pest Management Manager and Interim Grounds and Arboretum Manager, NY
Botanical Garden, Bronx, NY, 1999-2002

Supervised grounds and arboretum crews.

Developed and coordinated the IPM Program for all plant collections on 250 acres at NYBG. Collections include rare and exotic plants at the Conservatory, greenhouses, all trees and shrubs on the grounds, over 25 specialty gardens (roses, peonies, and perennials, etc), and high-maintenance turf. Established policy statement and other protocols as necessary. Supervised pest-control treatments and advised on cultural improvements. Monitored and established monitoring protocol. Trained staff to assume monitoring tasks. Created and instructed spray education programs to teach staff techniques and methods. Created and instructed apprentice program to increase spray team staff. Organized, monitored and instructed pesticide-use related health and safety programs. Ordered and maintained inventory of all pesticides. Maintained all appropriate pesticide records. Filed and maintained all necessary licenses and permits. Improved and maintained all pesticide related facilities. Diagnosed all plant problems and developed a control program involving biological, cultural, and chemical treatments. Instructor and IPM Group Project Leader for NY Botanical Garden Professional School of Horticulture.

Lamont-Doherty Earth Observatory, 1996-1999

Restored and maintained the 75-year-old estate and research facility campus, including a 30-tree apple orchard, a formal garden, 7 research buildings, and 125 acres of large trees and shrubs.

Mr. Gable's additional professional activities include:

Lectures/Continuing Education provided to local arborist businesses; NYS Arborists; Cornell Cooperative Extension; NYS Turf Grass Association; US Military Academy at West Point; Town

of Orangetown Highway and Building Department; National Parks Service-Northeast Quadrant; NYC Parks Dept.; various green industry associations (garden clubs, Nursery Associations, etc.); Rutgers Cooperative Extension; Rutgers University Continuing Education Program; Regional Golf Course Superintendent Association; and Martha Stewart Living Omnimedia. Pesticide training program provided to landscape and nursery professionals, NY State Arborists, and NYS Nuserymen's Association.

Project Coordinator and Adjunct Teacher for the Rockland Community College Horticulture Program. Courses taught were Ornamental Plant Identification; Soils; Plants, Pests and Disease with Practicum.

Cornell Cooperative Extension: - Co-developed and coordinated a state-of-the-art IPM Training Course and co-authored a manual for state-wide use (the manual was adopted by Cornell University and distributed to extension agents state-wide); co-developed and lectured a yearly IPM Training Program. Implemented a Cornell University grant to monitor and teach IPM scouting techniques to multiple golf courses.

Chairman and Committee Member of the Town of Orangetown Shade Tree Committee for 12 years. Implemented the Town of Orangetown Shade Tree Planting Program and updated local land development laws.

Town of Orangetown Arborist

Member of Rockland County committee formed on Pest Management with a focus on pesticide reduction.

New York State Arborists- Southeast District Governor

Mr. Gabel's professional memberships include:

International Society of Arboriculture; NYS Arborist Association NY-0215A;

III. IPM METHODOLOGY AND IMPLEMENTATION

This section addresses each of the requirements of the Site Plan Approval Resolution pertaining to the IPM program at MBIA.

A. MBIA will implement the IPM Plan at both its existing headquarters site as well as the Cooney Hill lots.

MBIA implemented its IPM program in July 2003 (Appendix B) at its existing headquarters site and the Cooney Hill area.

Cooney Hill Area

The program for the Cooney Hill lots to-date is demolition and removal of the vacant homes (completed), and conversion of the former lawn areas to meadow (completed) with no application of any fertilizers or pesticides (on-going). This area will remain dormant without any control of insects or use of fertilizers until the proposed Meeting House, headquarters building expansion, and parking garage are constructed in the future with associated landscaping installed.

As depicted on Figure 2, a large portion of the Cooney Hill property in the future with project buildout will be under IPM Management Zone 1, where "existing wooded areas to remain and proposed meadow area and stormwater management basin shall not be treated with pesticides, fertilizers, or herbicides". This is the same condition as exists today throughout the entire Cooney Hill area.

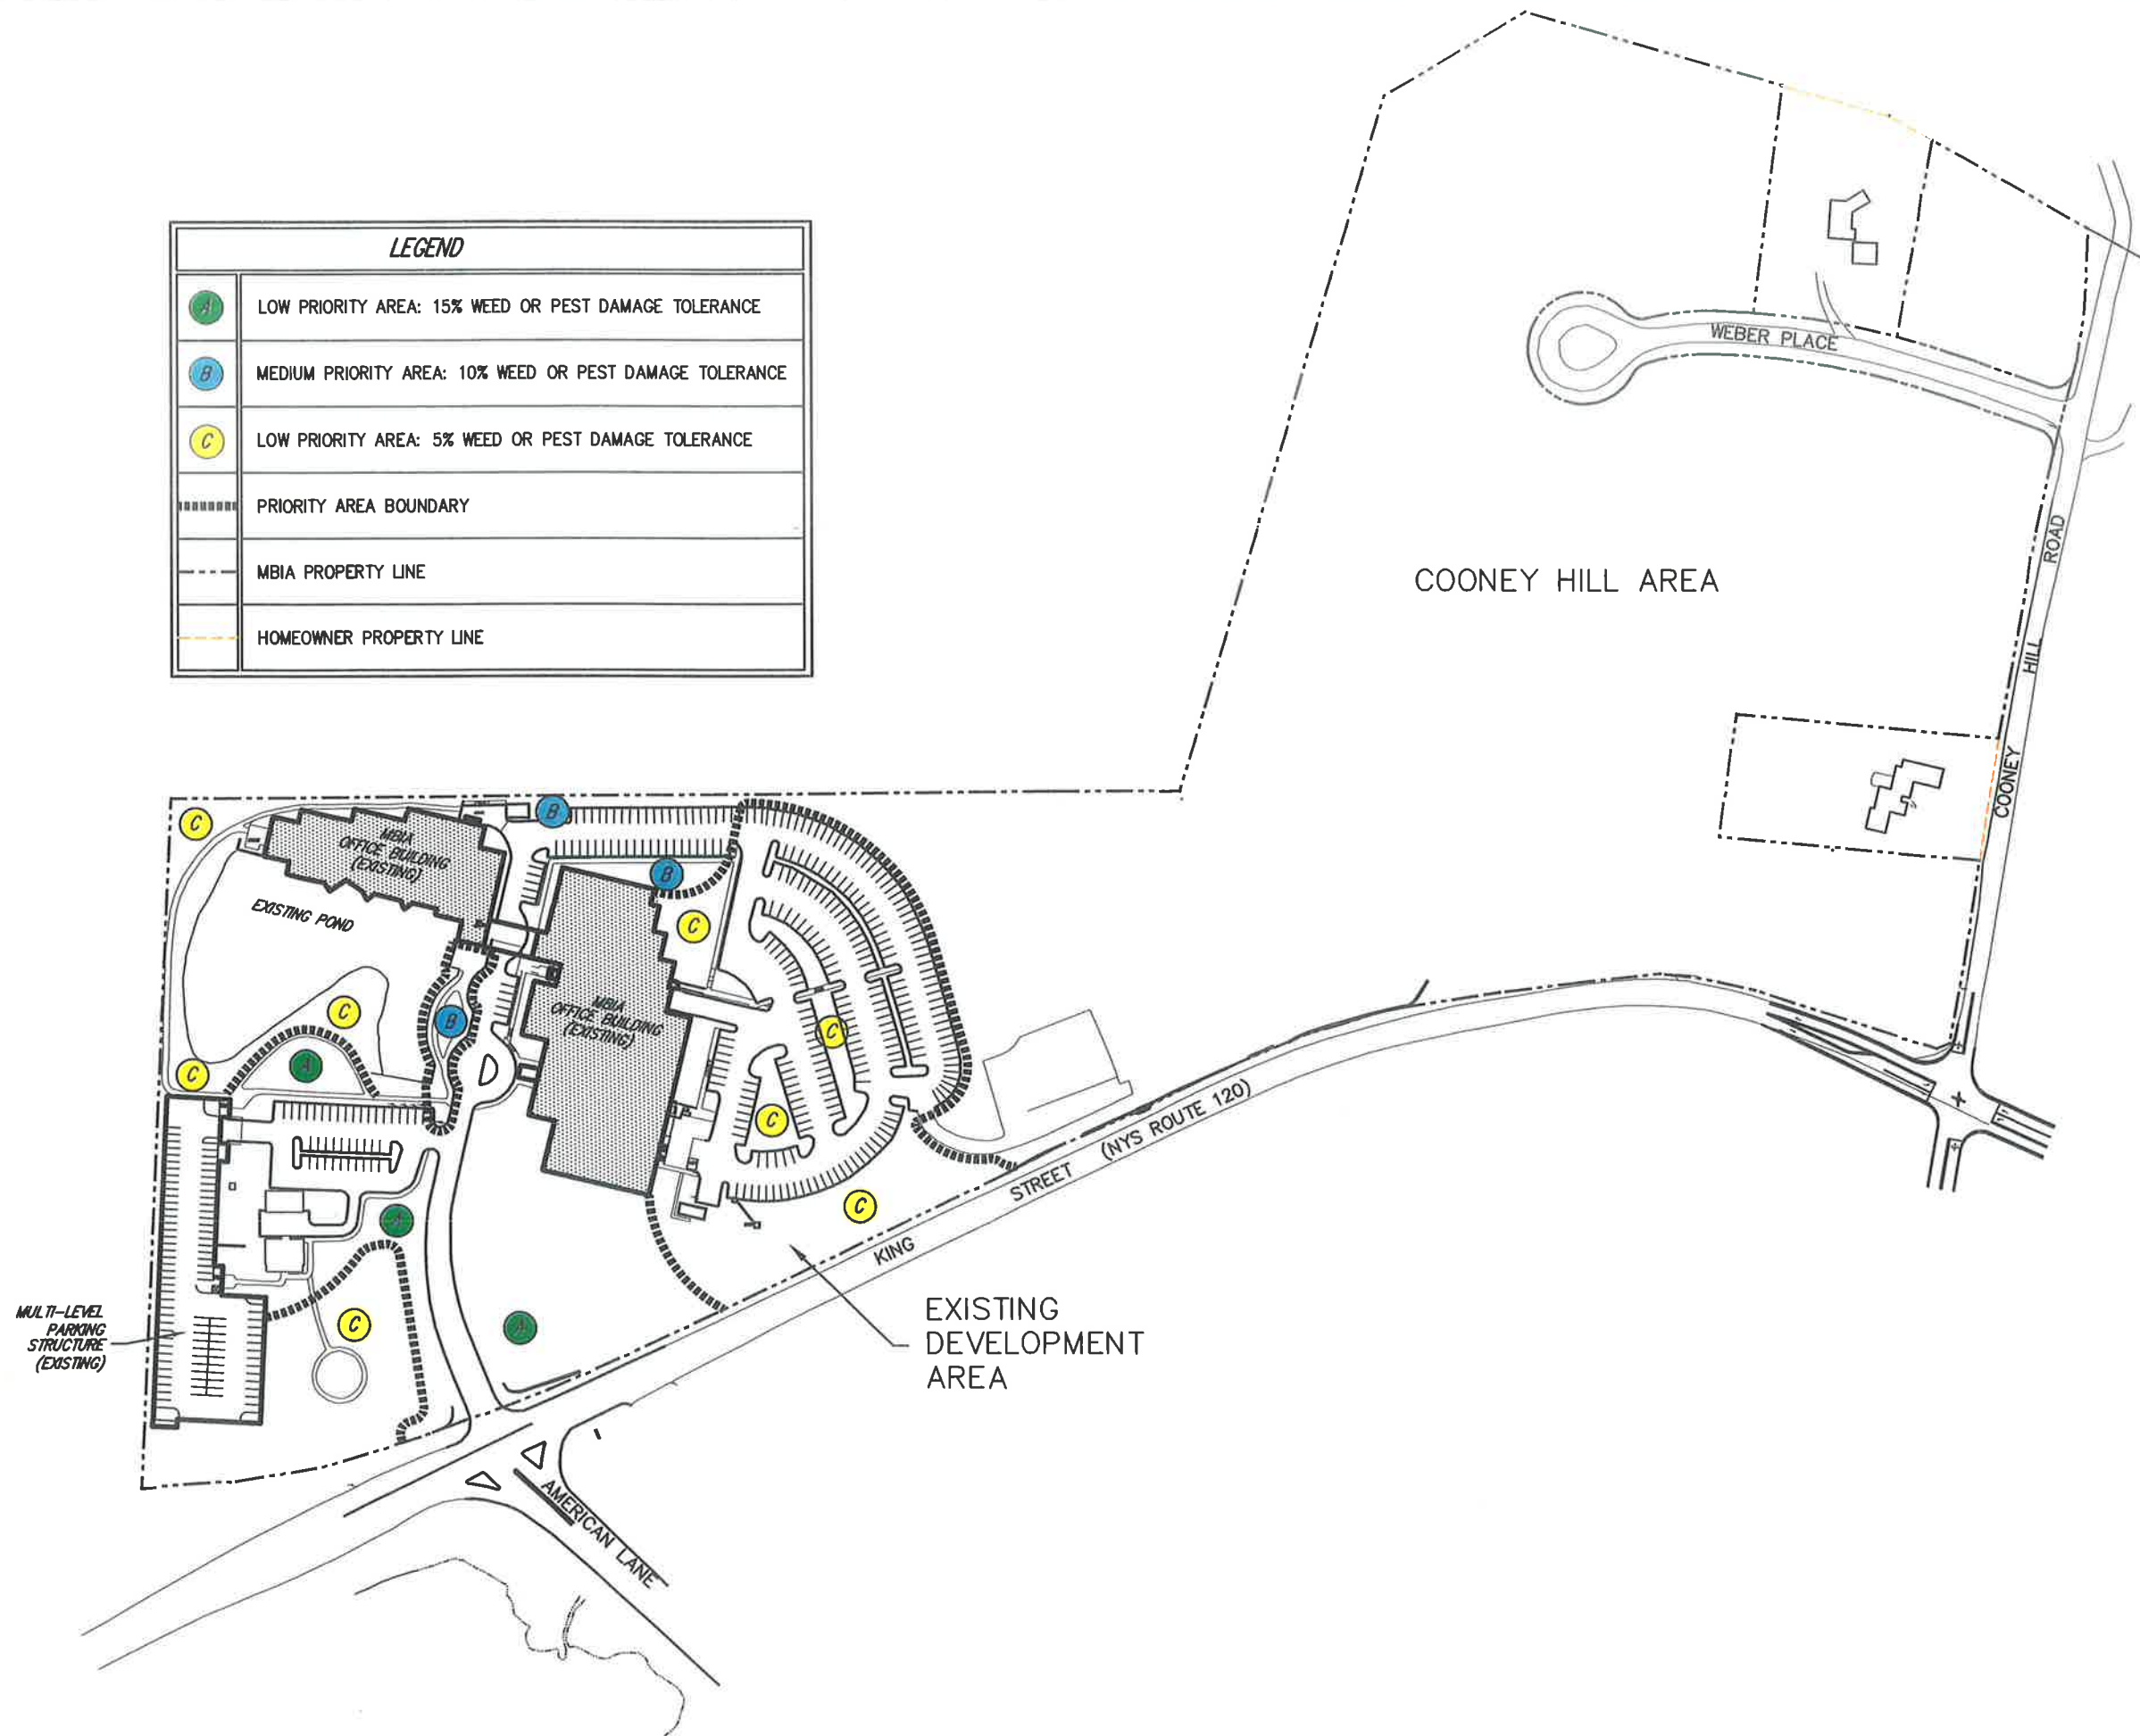

The three IPM Management Zones for the MBIA property, as depicted on Figure 2, are as follows:

<u>Zone</u>	<u>Management Plan</u>
1	Existing wooded areas to remain and proposed meadow areas and stormwater management basin plantings shall not be treated with pesticides, fertilizers or herbicides.
2	Proposed meadow areas shall not treated with pesticides, fertilizers or herbicides. Proposed trees shall be subject to treatment with pesticides, fertilizers, and herbicides based on approved Integrated Pest Management (IPM) program.
3	Trees, shrubs and turfgrass shall be subject to treatment with pesticides and fertilizers based on approved Integrated Pest Management (IPM) program.

Existing Headquarters Site

The existing MBIA headquarters site has been under IPM program management since July 2003 (Appendix B). As discussed within Appendix B, the IPM program consists of a routine, organized, and documented monitoring program. Two groups of plants are carefully monitored: turf grass (lawn areas), and herbaceous ornamentals (decorative landscaping). Within these groupings, the site has been further subdivided into areas of varying damage thresholds, with set protocols to initiate IPM treatments (Figure 3). These consist of low priority areas (where 15% weeds or pest damage is tolerated), medium priority areas (where 10% weeds or pest damage is tolerated), and high priority areas where 5% weeds or pest damage is tolerated.

Damage is spot treated wherever possible, with no blanket treatments of these areas unless judged necessary by the evaluated existing conditions. The lawn areas, for example, are in overall healthy condition, with damage spot-treated on a case-by-case basis. This treatment regime keeps the remainder of the lawn healthy, which in turn helps minimize the further spread of pest and weed damage. A similar situation applies to ornamental plantings, where

LEGEND	
A	LOW PRIORITY AREA: 15% WEED OR PEST DAMAGE TOLERANCE
B	MEDIUM PRIORITY AREA: 10% WEED OR PEST DAMAGE TOLERANCE

DATE: 08/30/2005

JMC PROJECT: 2000014

FIGURE: 03

JMC
JOHN MEYER CONSULTING, PC

generally a higher level of insect damage is tolerated. Generally, the level of harmful insects is controlled by other insects and/or insect diseases, creating an equilibrium. Should there be a situation where the harmful insects start to change this equilibrium for the worse, spot treatments are then initiated per plant or, where evaluated as necessary, a larger area to the minimum extent necessary.

As depicted on Figure 3, the areas of least tolerance for weeds or pest damage are those most visible for visitors (along the entry driveway and adjacent to the visitor's parking lot) and the areas adjacent to the existing buildings. Other lawn areas and planting areas, including the rear employee parking lot, are programmed for higher levels (10%-15%) of weeds or pest damage.

B. The health of landscape planting shall be assessed by a professional experienced in the practice of Integrated Pest Management.

Section II of this report details the professional qualifications of Mr. Donald Gabel, MBIA's IPM specialist.

Appendices B, C, and D contain Mr. Gabel's field reports which document the regular assessment of the health of MBIA's landscape plantings.

C. The IPM professional shall report any deterioration in the health of the landscaping or pest infestations and prescribe a remedial action program consistent with the most environmentally sensitive agents and maintenance as is practicable.

Appendices B, C, D and E contain Mr. Gabel's documentation of specific landscape health deterioration and pest infestations, along with prescriptions for remedial action programs consistent with the IPM product/action "Toolkit".

Information concerning the products contained within the MBIA IPM Toolkit is within Appendix F. These products are the only ones to be used on the property, and only under

the recommendation and guidance of Mr. Gabel to respond to a specific, localized situation where other courses of action have already been used or would not be effective.

For example, in many cases the pruning of infested/damaged branches has been sufficient to control pests. In other instances, infested plants have been removed and replaced with either healthy plants of the same species, or a different species more resistant to the specific pest within that specific location. Also, infestations such as bagworm have been controlled with removal of the bagworms by hand. Natural products such as horticultural or vegetable oil, horticultural soap, and biological controls are included within the IPM Toolkit. The objective of the IPM Toolkit is to use the least impactful method applied to the least area possible to deal with the particular pest problem. The purpose of the monitoring program is to identify potential pest issues early that are above the established tolerance thresholds, so they can be dealt with before the problem becomes larger.

D. Only low phosphorous fertilizers shall be used.

Fertilizing is an important lawn care practice, as it influences grass color, ability to recover from stress, and helps prevent weed invasions and disease.

Nitrogen (N), phosphorus (P), and potassium (K) are the three major nutrients needed by lawns. Nitrogen is the nutrient required most, although too much nitrogen can cause excessive topgrowth, leading to assorted problems. Percent nitrogen (by weight) is always the first of three numbers on the fertilizer bag, followed by phosphorus and potassium. For example, a 18-6-12 fertilizer contains 18 percent nitrogen. This number is important because it determines how much fertilizer is needed. In most cases, a rate of 1 pound of nitrogen per 1,000 square feet is suggested for each fertilizer application to the lawn. If high percentage nitrogen fertilizers are used, then less actual fertilizer product is needed to supply that one pound compared to fertilizers with low percent nitrogen. Recommended ratios of N-P-K for lawn fertilizers include 3:1:2 or 4:1:2. (Source: University of Illinois Extension web site.)

The fertilizers utilized by MBIA are high in nitrogen and low in phosphorus (20-3-4 and 25-2-5) or contain no phosphorus (14-0-14). As discussed above, these high percentage nitrogen fertilizers require less fertilizer to be applied. Also, the ratio of phosphorous within MBIA's fertilizers is less than that recommended above for general lawn care.

- E. Appropriate treatment measures will only be undertaken when weed and/or pest damage has exceed established threshold levels – low priority area will tolerate 15% weeds or pest damage, medium priority area 10%, and high priority area 5%.

This issue is discussed within Section III.A. of this report, and is illustrated on Figure 3.

Two groups of plants are carefully monitored: turf grass (lawn areas), and herbaceous ornamentals (decorative landscaping). Within these groupings, the site has been further subdivided into areas of varying damage thresholds, with set protocols to initiate IPM treatments (Figure 3). These consist of low priority areas (where 15% weeds or pest damage is tolerated), medium priority areas (where 10% weeds or pest damage is tolerated), and high priority areas where 5% weeds or pest damage is tolerated.

Damage is spot treated wherever possible, with no blanket treatments of these areas unless judged necessary by the evaluated existing conditions. The lawn areas, for example, are in overall healthy condition, with damage currently spot-treated on a case-by-case basis. This treatment regime keeps the remainder of the lawn healthy, which in turn helps minimize the further spread of pest and weed damage. A similar situation applies to ornamental plantings, where generally a higher level of insect damage is tolerated. Generally, the level of harmful insects is controlled by other insects and/or insect diseases, creating equilibrium. Should there be a situation where the harmful insects start to change this equilibrium for the worse, spot treatments are then initiated per plant or, where evaluated as necessary, a larger area to the minimum extent necessary.

As depicted on Figure 3, the areas of least tolerance for weeds or pest damage are those most visible for visitors (along the entry driveway and adjacent to the visitor's parking lot)

and the areas adjacent to the existing buildings. Other lawn areas and planting areas, including the rear employee parking lot, are programmed for higher levels (10%-15%) of weeds or pest damage.

- F. Except for ornamental and/or decorative landscaping and ground covers in the area immediately adjacent to the proposed Meeting House, refrain from use of pesticides, herbicides, or fertilizers in the drainage area that will discharge from PDA-2A and ultimately run into the Kensico reservoir unless such use is required to protect public health.

As illustrated on Figure 2, the portion of the Cooney Hill area that contains the former drainage area PDA-2A (which has subsequently been divided into three component drainage areas, PDA-2C, PDA-2D, and PDA-2A), is entirely within IPM Management Zone 1, where "existing wooded areas to remain and meadow area and stormwater management basin shall not be treated with pesticides, fertilizers, or herbicides." This is the same condition as exists today throughout the entire Cooney Hill area, which is currently undeveloped.

- G. In IPM Management Zone 1, there shall be no use of pesticides or fertilizers or herbicides.

As illustrated on Figure 2, IPM Management Zone 1 specifies that "existing wooded areas to remain and proposed meadow area and stormwater management basin shall not be treated with pesticides, fertilizers, or herbicides."

- H. MBIA or its professional independent contractors shall prepare and submit annual reports to the Town, which will include periodic landscape inspection reports and a description of remedial action taken, by location during the preceding year.

These reports are contained within Appendix B (2003), Appendix C (2004), and Appendix D (2005 year-to-date).

IV. APPENDICES

The Appendices follow this page.

RESOLUTION

Action:	Eighth Site Plan, Wetlands Permit and Tree Removal Permit Approvals
Application Name:	MBIA Headquarters Expansion
Owner/Applicant:	MBIA Insurance Corporation
Designation:	Section 3, Block 4, Lot 3A Section 3, Block 4, Lot 3B, Section 3, Block 4, Lots 3, 3A1, 3C, 3D, 3F, 3G, 3G1, 3H, 3.1, 3.3, 3.4, 3.6, 3.7, 3.8, and 3.9 DOB-20A Zoning District
Zone:	35.97-acres
Acreage:	Route 120 (King Street)
Location:	September 16, 1996
Approval Dates:	October 7, 1996
Amended Approval:	February 10, 1997
Second Amended Approval:	May 5, 1997
Third Amended Approval:	January 26, 1998
Fourth Amended Approval:	August 10, 1998
Fifth Amended Approval:	April 26, 1999
Sixth Amended Approval:	December 13, 1999
Seventh Amended Approval:	December 13, 2000
Expiration of Approval:	September 13, 2004
Eighth Date of Approval:	September 13, 2005
Eighth Expiration Date:	

WHEREAS, MBIA submitted an application for Eighth Amended Site Plan Approval to the Planning Board and the requisite fee was paid; and

WHEREAS, by resolution dated October 7, 1996 the Planning Board granted Amended Site Plan Approval to MBIA for expansion of its corporate headquarters from 155,618 square feet to a total of 235,000 square feet and for the construction of a parking garage to serve the office building expansion; and

WHEREAS, by resolution dated February 10, 1997, the Planning Board granted a Second Amended Site Plan Approval to MBIA associated with installation of canopies at various entrances; and

WHEREAS, by resolution dated May 5, 1997, the Planning Board granted Third Amended Site Plan Approval associated with changes in the parking plan and the incorporation of additional landscaping; and

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals
September 13, 2004
Page 2 of 23

WHEREAS, by resolution dated January 26, 1998, the Planning Board granted Fourth Amended Site Plan Approval associated with modest modifications to the building footprint, caused by revised internal layouts and structural considerations; and

WHEREAS, by resolution dated August 10, 1998, the Planning Board granted Fifth Amended Site Plan Approval associated with the following: (1) creation of additional basement floor area consisting of 14,356 square feet of amenity space and 11,768 square feet of storage space; (2) creation of a secondary temporary building access for use by construction workers and employees as well as the installation of a second means of egress (fire escape) from the generator room located at the southwest corner of the parking structure; (3) amendment by the Town Board, to relocate the then existing Conservation Easement from Lot 3A to Lot 3A-1; (4) granting of a use variance by the Zoning Board of Appeals to permit a temporary construction and secondary emergency access over the residentially zoned Lot 3A-1 parcel; and (5) the creation of an end-use plan for the northern half of the site which provided for the future construction of 68 landbanked parking spaces, a tennis and basketball court, paved walking trails and landscaping; and

WHEREAS, the Fifth Amended Site Plan approval resulted in a total floor area of 261,124 square feet, including the approved basement. The parking requirement for office space is one parking space for each 350 square feet of floor area. Accordingly, the parking requirement for 235,000 square feet is 672 parking spaces. The MBIA site presently contains 310 parking spaces in the existing parking garage and an additional 362 parking spaces at grade for a total of 672 parking spaces. The parking requirement for 235,000 square feet of office space is satisfied. If, however, the entire 261,124 square feet of building area were used for the calculation of required parking, a total of 746 spaces would be required; and

WHEREAS, the Sixth Amended Site Plan Application involved the construction of a stairway and overpass to connect the two existing buildings and the construction of a trash compactor enclosure along the rear property line; and

WHEREAS, by resolution December 13, 1999, the Seventh Amended Site Plan Application, which involved the construction of a salt storage structure, to use the previously approved temporary construction access on NYS Route 120 as a permanent emergency access drive, and to modify the configuration of the previously approved landbanked parking was approved; and

WHEREAS, MBIA Insurance Corporation (hereinafter "MBIA") is the owner of certain property known on the Tax Assessment Map of the Town of North Castle as Section 3, Block 4, lot 3A Section 3, Block 4, lot 3B, Section 3, Block 4, lots 3, 3A1, 3C, 3D, 3F, 3G, 3G1, 3H, 3.1, 3.3, 3.4, 3.6, 3.7, 3.8, and 3.9, parcels of approximately 35.97 acres in size on which is located the 261,000 square foot MBIA Corporate Headquarters; and

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals
September 13, 2004
Page 3 of 23

WHEREAS, beginning in 1998 and as part of the planned expansion of its corporate headquarters, MBIA acquired 15 of the 17 lots in the Cooney Hill Area, which lots are shown on the Tax Assessment Map of the Town of North Castle as Section 3, Block 4, lots 3, 3A1, 3C, 3D, 3F, 3G, 3G1, 3H, 3.1, 3.3, 3.4, 3.6, 3.7, 3.8, and 3.9; and

WHEREAS, this application is based on MBIA's intention to develop an additional 165,000 square feet of office space on its property, together with 53,000 square feet of additional amenity space and a 20,000-square foot meeting house, thereby increasing the size of its corporate headquarters from approximately 235,000 square feet of office space and 26,000 square feet of amenity space to approximately 400,000 square feet of office space and 99,000 square feet of amenity space, including the proposed meeting house; and

WHEREAS, on January 8, 2002, in connection with this proposed building expansion, MBIA submitted an application to the Town Board requesting the following items:

1. The rezoning of the Cooney Hill lots from their existing zone of R-1A (one-family residence) to DOB-20A (Designed Office Business);
2. The adoption of an amendment to the Town Zoning Ordinance to amend the special permit provisions which govern the development of DOB-20A sites which are being developed as transferee sites;
3. Approval of the preliminary development concept plan showing the proposed expansion of the MBIA corporate headquarters;
4. Adoption of an amendment to the Development Plan Map in conjunction with the 1996 Town Comprehensive Plan Update to correspond with the text of the 1996 Town Comprehensive Plan Update by indicating that the Cooney Hill lots are appropriate for office development; and
5. Approval of the extinguishment of the restriction that burdened Section 3, Block 4, lot 3A1, which restriction was entitled "Amended Declaration of Covenants and Restrictions" executed by MBIA and recorded in the Westchester County Clerk's Office, Division of Land Records, which declaration restricted MBIA's use of said lot; and

WHEREAS, on March 7, 2002 and in conjunction with the aforesaid application, the North Castle Town Board was designated as Lead Agency for coordinated review of the entire action and the Town Board issued a positive declaration with a direction to prepare a Draft Environmental Impact Statement ("DEIS"); and

WHEREAS, the Town Board conditionally accepted the DEIS on October 9, 2002; and

WHEREAS, the DEIS and the Notice of Completion were filed by the Town Board on October 23, 2002; and

WHEREAS, the Town Board held a public hearing on the DEIS on November 20, 2002; and

WHEREAS, the public comment period on the DEIS ended on December 20, 2002; and

WHEREAS, the Town Board conditionally accepted the Final Environmental Impact Statement ("FEIS") on September 10, 2003 and the Town Board filed the FEIS and the Notice of Completion on September 12, 2003; and

WHEREAS, the Town Board carefully considered the complete record and measures intended to mitigate any and all significant impacts to the environment that might be caused by this development; and

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 7 of 23

WHEREAS, the Town Board adopted a Findings Statement on the MBIA Headquarters expansion on October 8, 2003, and the Town Board concluded that the MBIA Headquarters expansion assessed in the FEIS, in conjunction with mitigation measures specified in the DEIS and the FEIS and the Findings Statement, was an action which minimized or avoided adverse environmental effects to the maximum extent practicable; and

WHEREAS, the environmental review conducted in connection with the January 8, 2002 application fully considered the environmental impacts and mitigation measures associated with the special permit approval for the proposed development and, therefore, no further SEQRA compliance will be necessary in connection with such an application; and

WHEREAS, by resolution dated October 8, 2003, the Town Board approved the zone map amendments required to rezone the Cooney Hill lots from the R-1A district to the DOB-20A district and granted preliminary development concept plan approval with mitigating measures identified in the Environmental Findings Statement adopted October 8, 2003; and

WHEREAS, by resolution dated October 8, 2003, the Town Board of the Town of North Castle amended the Town Development Plan Map to delineate the Cooney Hill area as appropriate for office development, in conformity with the existing text of the Comprehensive Plan; and

WHEREAS, by resolution dated October 8, 2003, the Town Board adopted a resolution to extinguish the Amended Declaration of Covenants and Restrictions associated with the MBIA proposed headquarters expansion; and

WHEREAS, on October 8, 2003 the Town Board found that the requirements of Article VIII of the Environmental Conservation Law of the State of New York and the regulations promulgated thereunder were satisfied; and

WHEREAS, on January 8, 2004, in connection with the proposed building expansion, MBIA submitted an application to the Town Board for a special use permit and to demap a portion of Weber Place and, simultaneously therewith, an application was filed with the Planning Board for amended site plan approval; and

WHEREAS, on January 8, 2004, the Town Board reviewed the special permit application and referred it to the Planning Board for report and recommendation; and

WHEREAS, the Town of North Castle Planning Board reviewed the special use permit application at its regularly scheduled meeting on January 12, 2004; and

**MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals**
September 13, 2004
Page 8 of 23

WHEREAS, on January 12, 2004, the Planning Board voted to issue a positive recommendation to the Town Board in support of the special use permit, subject to certain conditions; and

WHEREAS, on February 18, 2004, the Town Board scheduled the required public hearing on the special use permit application for March 10, 2004; and

WHEREAS, the proposed action was referred to the Westchester County Planning Board for its review and recommendation; and

WHEREAS, by a letter dated November 20, 2003, the Westchester County Planning Board reviewed the proposed action under the provisions of Section 239 L, M and N of the General Municipal Law and Section 277.61 of the County Administrative Code and indicated that the proposed action was consistent with *Patterns for Westchester*, the County's long-range land use planning policy document. In addition, the County had additional recommendations with regard to erosion control and stormwater management; and

WHEREAS, on March 17, 2004, the Town Board reconvened the required public hearing at the Town of North Castle Town Hall at 15 Bedford Road, Armonk, NY at which time all those wishing to be heard were given the opportunity to be heard and the hearing was closed on that date; and

WHEREAS, the Planning Board is aware that the applicant intends to develop the proposed project in three phases as follows: (1) The first phase consisting of removal of underground residential fuel oil tanks, removal of dead trees and pruning of healthy trees, the reconstruction of existing stone walls and the demolition of the existing Cooney Hill homes, construction of a graded earth berm up to six feet in height along King Street to shield the Cooney Hill area, the construction of walking paths and a fitness circuit to provide recreational opportunities for MBIA employees, and the construction of new stone walls around the perimeter of the property; (2) The second phase will include the construction of the meeting house and the storm water detention area located to the south of the meeting house; and (3) The third phase will consist of the construction of the corporate headquarters expansion together with the new parking structure; and

WHEREAS, the Town has requested, received and considered comments from the New York City Department of Environmental Protection (NYCDEP), New York State Department of Environmental Conservation (NYSDEC), New York State Department of Transportation (NYSDOT), the Town of North Castle Conservation Board, Town Attorney, the Town Engineer, the Building Inspector and the Planning Consultant regarding the proposed

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals

Page 9 of 23

development; and

WHEREAS, the Planning Board members have inspected the site and are familiar with the nature of the site, the surrounding area and the proposed development; and

WHEREAS, the requirements of the Zoning Ordinance, the Subdivision Regulations and the Town Development Plan of the Town of North Castle have been met by the site plan application;

WHEREAS, the special permit application for the MBIA property was determined by the Town Board to meet the specific special use permit requirements as set forth in §213-33(Q) as follows:

1. The property is currently zoned Designated Office Building (DOB-20A) District;
2. The property is a "transferee site" pursuant to a resolution of the Town Board adopted on January 26, 1988, which approved the transfer of approximately 59,716 sq. ft. of development rights from the Kingswood Corporate Office Park parcel to the subject premises;
3. The property was initially rezoned to DOB-20A at a reduced site size of 14.29 acres;
4. The property is located immediately adjacent to NYCDEP watershed lands; and
5. At least 90% of the parking will be accommodated in a structured parking garage. The total number of on-site parking spaces following the proposed expansion will be 1,254. Of those spaces, 1,203 will be in structured parking garages and 51 will be at-grade, for a total of 96% structured parking spaces; and
6. The development site will consist of on-site amenities to include 53,000 sq. ft. of amenity space and 20,000 sq. ft. of space in an on-site meeting house for a total of 99,000 square feet of amenity space, including the existing 26,000 square feet of amenity space; and

WHEREAS, the Town Board previously found, pursuant to §213-30 of the Zoning Ordinance that the following conditions and standards have been met:

1. The location and size of the use, the nature and intensity of the operations involved in it or conducted in connection with it, the size of the site in relation to it and the

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 10 of 23

location of the site with respect to streets giving access to it are such that it will be in harmony with the appropriate and orderly development of the district in which it is located in that it complies with all special requirements for such use established in this chapter;

2. The location, nature and height of buildings, walls, fences and the nature and extent of existing or proposed planting on the site are such that the use will not hinder or discourage the appropriate development and use of adjacent land and buildings;
3. Operations in connection with the special permit use will not be more objectionable to nearby properties by reason of noise, fumes, vibrations, or other characteristics than would be the operations of any permitted uses not requiring a special permit; and
4. Parking areas will be of adequate size for the particular use, properly located and suitably screened from adjoining residential uses, and the entrance and exit drives shall be laid out so as to achieve maximum convenience and safety; and

WHEREAS, a special use permit was conditionally granted by the Town Board on March 24, 2004; and

WHEREAS, the Conservation Board in its May 13, 2004 memorandum to the Planning Board unanimously recommended approval of the wetland permit with the following observations and recommendations:

- i. Reconstruction of the NYCDEP stone wall.
- ii. Identification and documentation of old stone walls and preservation of those walls where possible.
- iii. Replacement of sugar maples along Route 120.
- iv. The removal of dead and unhealthy trees.
- v. That a conservation easement be placed in the vicinity of the wetland and across the westerly portion of the property.

WHEREAS, the Architectural Review Board (ARB) granted approval for the meeting house, office building and parking garage on July 7, 2004; and

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals
September 13, 2004
Page 11 of 23

WHEREAS, the Applicant is not proposing to disturb any Town-regulated wetland; and

WHEREAS, the Applicant is proposing to disturb a total of 846 square feet of Town-regulated wetland buffer during Phase I and Phase II and an additional 10,120 square feet of Town-regulated wetland buffer disturbance during Phase III; and

WHEREAS, the Planning Board opened and closed a Public Hearing on August 16, 2004, regarding the required wetlands permit application; and

WHEREAS, the Applicant is proposing the removal of 345 Town-regulated trees, 9 of which are Town-regulated Significant Trees; and

WHEREAS, the Applicant is proposing a garage height of 55 feet; and

WHEREAS, a zone text amendment was granted by the Town Board permitting an increase in the permitted height of a parking structure above 3 stories/45 feet as determined by the Planning Board; and

WHEREAS, all buildings are required to be located at a distance no less than 150 feet from the street on which such building has frontage (except as permitted pursuant to Section 213-33Q(3) of the Town Code), except that gate houses, bus stop shelters and security offices, where such buildings are one story in height, may be located at a distance not less than 25 feet from the street, and one-story accessory buildings may have such lesser setback when approved by the Planning Board; and

WHEREAS, the proposed gate house is located 40 feet from Cooney Hill Road; and

WHEREAS, no building shall be located at a distance less than 300 feet from side and rear boundaries of the lot, except that where a contiguous lot is in a nonresidential zoning district, such distance may be reduced to not less than 100 feet on each side where such lots adjoin, and except that accessory buildings of two stories or less may have such lesser setbacks when approved by the Planning Board, in connection with its action on a site plan; and

WHEREAS, the proposed accessory meeting house building is proposed to be located 178 feet from the Takeda property line and 27 feet from the Weber Place right-of-way; and

WHEREAS, the application provides for a total of 1,254 parking spaces, thereby satisfying the parking requirement for the 400,000 square feet of office space within the existing buildings. In the event that the approximately 99,000 square feet of amenity area is used for office space,

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 12 of 23

the Applicant would be required to seek Amended Special Use Permit Approval from the Town Board and Amended Site Development Plan Approval from the Planning Board for the construction of the total required amount of off-street parking; and

WHEREAS, the Planning Board has inspected the site and is familiar with the nature of the site, the surrounding area, and the proposed development; and

WHEREAS, the Planning Board has requested, received, and considered comments from the Town Attorney, Town Engineer and Town Planner regarding the proposed development; and

WHEREAS, the requirements of the Zoning Ordinance of the Town of North Castle have been met by said Application; and

WHEREAS, the Town Board, acting as Lead Agency for the environmental review of the proposed actions, after due deliberation, adopted an "Environmental Findings Statement" on October 8, 2003; and

WHEREAS, the Planning Board, acting as an Involved Agency for environmental review of the proposed actions, after due deliberation, adopted its own "Environmental Findings Statement" on August 16, 2004; and

WHEREAS, the Planning Board has satisfied the procedural requirements of Article 8 of the Environmental Conservation Law and the Regulations promulgated thereunder contained in 6 NYCRR 617; and

WHEREAS, based upon the entire record presented to the Planning Board, as well as the Findings made in the Environmental Findings Statement, a copy of which is hereby incorporated by reference, the Planning Board believes there is compelling evidence to support the proposed site development plan, wetlands permit and tree removal permit approvals; and

BE IT RESOLVED, that the Application for eighth amended site plan, wetlands permit and tree removal permit approvals be, and it hereby is, granted, and the Planning Board Chairman is authorized to sign the Final Site Plan subject to the conditions identified below; and

BE IT FURTHER RESOLVED, that the Planning Board, for the reasons set forth in this resolution and based upon the entire record herein finds that the proposed height of the parking structure at five (5) stories and fifty-five (55) feet is appropriate pursuant to §213-33(Q)(3)(p) of the Zoning Ordinance; and

MBIA Headquarters Expansion

Site Plan, Wetlands Permit and Tree Removal Permit Approvals

September 13, 2004

Page 13 of 23

BE IT FURTHER RESOLVED, that the Planning Board, for the reasons set forth in this resolution and based upon the entire record herein finds that the height of the proposed expansion shall be calculated as set forth in the definition of height, utilizing the average level of the finished grade adjacent to the exterior walls of the building; and

BE IT FURTHER RESOLVED, that for the reasons set forth in this resolution and based upon the entire record herein the Planning Board hereby approves the additional height of the mechanical structures on the roof of the proposed headquarters expansion as provided in §213-14(E); and

BE IT FURTHER RESOLVED, that the proposed accessory meeting house building is permitted to have a reduced setback of 27 feet from Weber Place and the proposed gate house is permitted to be located 40 feet from Cooney Hill Road; and

BE IT FURTHER RESOLVED, that the proposed accessory meeting house is permitted to have a reduced setback of 178 feet from the Takeda property line; and

BE IT FURTHER RESOLVED, that this approval shall expire on September 13, 2005 if no further extension of time has been requested or granted by the Planning Board.

Prior to the Signing of the Site Plan:

(The initials of the appropriate Town Official and date shall be placed in the space below to indicate that the condition has been satisfied)

- _____ 1. The site plan shall be revised to depict a minimum of four (4) off-street loading spaces that meet the minimum size requirements of the Town Code to the satisfaction of the Town Planning Consultant.
- _____ 2. The zoning conformance table shall be revised to indicate that the proposed meeting house is 20,000 square feet to the satisfaction of the Town Planning Consultant.
- _____ 3. The Applicant shall prepare a detailed Integrated Pest Management plan to the satisfaction of the Town Planning Consultant demonstrating how each of the goals and objectives of the Integrated Pest Management plan described in the FEIS will be implemented. Specifically, the IPM shall address the following:
 - MBIA will implement the IPM Plan at both its existing headquarters site as well as the Cooney Hill lots.

MBIA Headquarters Expansion

Site Plan, Wetlands Permit and Tree Removal Permit Approvals

September 13, 2004

Page 14 of 23

- The health of landscape planting shall be assessed by a professional experienced in the practice of integrated pest management.
- The IPM professional shall report any deterioration in the health of the landscaping or pest infestations and prescribe a remedial action program consistent with the most environmentally sensitive agents and maintenance as is practicable.
- Only low phosphorous fertilizers shall be used.
- Appropriate treatment measures will only be undertaken when weed and/or pest damage has exceeded established threshold levels – low priority area will tolerate 15% weeds or pest damage, medium priority area 10%, and high priority area 5%.
- Except of ornamental and/or decorative landscaping and ground covers in the area immediately adjacent to the proposed meetinghouse, refrain from use of pesticides, herbicides, or fertilizers in the drainage area that will discharge from PDA-2A and ultimately run into the Kensico reservoir unless such use is required to protect public health.
- In IPM Management Zone 1, there shall be no use of pesticides or fertilizers or herbicides.
- MBIA or its professional independent contractors shall prepare and submit annual reports to the Town, which will include periodic landscape inspection reports and a description of remedial action taken, by location, during the preceding year.

4. The plans shall be revised to label the existing Sugar Maple Trees as identified in the March 15, 2004 letter to MBIA from Alpine Nursery to the satisfaction of the Town Planning Consultant.

5. The plans shall be revised to depict a tree protection fence, to be erected on the Applicant's property, a radial distance of 31 feet from the trunk of Tree #15 (as identified in the March 15, 2004 letter to MBIA from Alpine Nursery).

MBIA Headquarters Expansion**Site Plan, Wetlands Permit and Tree Removal Permit Approvals**

September 13, 2004

Page 15 of 23

- _____ 6. The plans shall be revised to depict a tree protection fence, to be erected on the Applicant's property a radial distance of 40 feet from the trunk of Tree #16 (as identified in the March 15, 2004 letter to MBIA from Alpine Nursery).
- _____ 7. The Applicant shall submit, as necessary and appropriate, final details to the satisfaction of the Town Engineer of site, final grading and storm drainage including quality and quantity mitigation for 2-100 year storm events, utility connections, sight lines and curbing, parking, construction phasing, driveway and pavement specifications, and site lighting.
- _____ 8. Develop plan for the demolition/removal of Weber Place to the satisfaction of the Town Engineer.
- _____ 9. Payment of all applicable fees, including any outstanding consulting fees.
- _____ 10. The Applicant shall furnish the necessary documentation confirming that all taxes assessed against the property have been paid.

Prior to the Issuance of a Building Permit:

(The initials of the appropriate Town Official and date shall be placed in the space below to indicate that the condition has been satisfied)

- _____ 1. The approved site plan shall be signed by both the Planning Board Chairman and the Town Engineer.
- _____ 2. Prior to May 1, 2004 or prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), whichever is earlier, the Applicant shall be required to merge all individual building lots into one building lot to the satisfaction of the Town Attorney and the Tax Assessor.
- _____ 3. Prior to May 1, 2004 or prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), whichever is earlier, the Applicant shall be required to revise the plat map to depict the dedication of the necessary amount of land adjacent to Cooney Hill Road to provide a right-of-way at least 25-feet in width from the centerline of the road to the satisfaction of the Town Engineer.
- _____ 4. Prior to May 1, 2004 or prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), whichever is earlier, the

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 16 of 23

Applicant shall be required to submit evidence satisfactory to the Town Attorney demonstrating that a revised plat has been duly filed with Westchester County.

5. Submission of documentation confirming that the New York City Department of Environmental Protection (NYCDEP) has approved the submitted Stormwater Pollution Prevention Plan (SPPP). Any significant changes, as determined by the Town Engineer, required by the NYCDEP not depicted on the plans approved by the Planning Board will require amended site plan approval from the Planning Board.
6. Submission of documentation confirming that the New York State Department of Environmental Conservation (NYSDEC) has issued a State Pollution Discharge Elimination System permit (SPDES). Any significant changes, as determined by the Town Engineer, required by the NYSDEC not depicted on the plans approved by the Planning Board will require amended site plan approval from the Planning Board.
7. Submission of a proposed plan detailing the responsibility and timing of a qualified consultant to monitor water quality during construction to assure full compliance with the SPPP and State water quality standards to the satisfaction of the Town Engineer (the plan may be contained in other documentation, e.g. SPDES Permit). It is noted that the plan shall indicate that all mitigation measures shall be owned and maintained by MBIA to the satisfaction of the Town Engineer.
8. Submission of a proposed plan detailing the responsibility and timing of the management and maintenance program for the Stormwater Treatment System to be monitored by MBIA on an ongoing basis in accordance with a regular schedule (no less than twice each year) to the satisfaction of the Town Engineer (the plan may be contained in other documentation, e.g. SPPP).
9. Submission of information detailing how MBIA will comply with the maintenance requirements set forth in the New York State Department of Environmental Conservation's Stormwater Design Manual's section covering Stormwater Ponds to the satisfaction of the Town Engineer (the information may be contained in other documentation, e.g. SPPP).

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 17 of 23

- _____ 10. The Applicant shall post a maintenance bond in the amount necessary to repair area roadways in the event that construction traffic creates impassable conditions to the satisfaction of the Town Engineer and the Town Attorney.
- _____ 11. For construction requiring blasting, in order to minimize adverse effects from rock drilling, blasting, and excavations activities, the Applicant shall prepare a protection and monitoring program in accordance with the Town of North Castle Town Code (Chapter 71) to the satisfaction of the Town Engineer. Rock crushing operations shall not be permitted without explicit approval from the Planning Board.
- _____ 12. All residential wells on properties owned by MBIA shall be abandoned to the satisfaction of the Town Engineer as per the requirements listed in Bulletin 42, "Ten State Standards" (1997, Mississippi River Board of State and Provincial Public Health and Environmental Managers) and the Westchester County Department of Health.
- _____ 13. All competing vegetation shall be removed from tree protection areas and replaced with organic mulch at a 3"-4" depth for Sugar Maple Trees located on the Applicant's property (as referenced in the March 15, 2004 letter to MBIA from Alpine Nursery). In addition, the trees located on the Applicant's property shall be treated with a biostimulant. Finally, the small amount of dead wood shall be pruned out of each tree located on the Applicant's property. The Applicant shall submit information to the satisfaction of the Planning Consultant indicating that the above requirements were completed.
- _____ 14. The Applicant shall submit a final site safety program for each phase of construction to the satisfaction of the Town Engineer and the Building Inspector.
- _____ 15. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), MBIA shall be required to memorialize a restriction on development, to the satisfaction of the Town Attorney, foregoing any future right to develop that portion of the Cooney Hill area which is immediately adjacent to New York City owned land, including the entire acreage of the lots on the west side of Weber Place formerly owned by Witherspoon, Schrecke, and Murray, and a 200 foot wide option of lots formerly owned by Mastroianni, McSpedon and Popoli. Such restriction shall also apply to the lot on the west side of Weber Place currently owned by Delago, if and when said lot is acquired by MBIA:

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 18 of 23

- _____ 16. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), the Applicant shall provide an Engineer's Report and details of the proposed sewer connection to the Sewer District No. 3 pump station describing whether the current system can accommodate the proposed flows and whether there are any improvements or upgrades necessary to accommodate the proposed MBIA headquarters expansion to the satisfaction of the Town Engineer.
- _____ 17. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), the Applicant shall be required to receive Westchester County approval of the Applicant's sewer petition to extend the boundaries of the Blind Brook Sewer District currently pending before the County to the satisfaction of the Town Attorney.
- _____ 18. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), the Applicant shall be required to receive approval from the Town of North Castle Town Board extending the boundaries of Sewer District No. 3 to the satisfaction of the Town Attorney.
- _____ 19. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), the Town Board shall be required to authorize the demapping of Weber Place, to the maximum extent practicable, and the removal of the pavement for same. All pavement removal shall be completed to the satisfaction of the Town Engineer.
- _____ 20. The Applicant shall secure, to the satisfaction of the Town Engineer, any approvals required by the New York State Department of Environmental Conservation and New York City Department of Environmental Protection. Any substantial changes, as determined by the Town Engineer, by any agency shall require amended site development plan approval by the Planning Board.
- _____ 21. Prior to the issuance of any Building Permit(s) for Phase II (the construction of the Meeting House), the Applicant shall secure, to the satisfaction of the Town Engineer, any approvals required by the Westchester County Health Department for the expansion of the water supply.

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals

Page 19 of 23

Prior to the Issuance of a Certificate of Occupancy:
(The initials of the appropriate Town Official and date shall be placed in the space below to indicate that the condition has been satisfied)

- _____ 1. An "as built" plan shall be submitted to the Town Building Inspector.
- _____ 2. The applicant shall pay, in an amount and manner determined appropriate by the Town Board, all site inspection review costs.

Other Conditions:

1. All references to "the Applicant" shall include the Applicant's successors and assigns.
2. Compliance with all applicable local laws and ordinances of the Town of North Castle and any conditions attached to permits issued thereunder.
3. Construction activities shall be limited to the hours specified in Section 137-19 of the Town Code.
4. On site amenities shall be limited to 6:00 AM to 8:00 PM, Monday through Friday. The outside multi-use athletic court shall be fitted with fixtures that direct light down and avoid spillage onto adjacent properties and King Street.
5. MBIA shall forego any future right to develop that portion of the Cooney Hill area which is immediately adjacent to New York City owned land, including the entire acreage of the lots on the west side of Weber Place formerly owned by Witherspoon, Schrecke, and Murray, and a 200 foot wide option of lots formerly owned by Mastroianni, McSpedon and Popoli. Such restriction shall also apply to the lot on the west side of Weber Place currently owned by Delago, if and when said lot is acquired by MBIA:
 - i. Such restriction on development shall be memorialized, either prior to site plan approval or as a condition thereof in a conservation easement to an entity, mutually agreed upon by MBIA, the town, NRDC, and The Riverkeeper, which entity is committed to the preservation of open space in perpetuity for the purpose of protecting the Kensico Reservoir;
 - ii. The establishment of the conservation easement area shall be irrevocable with respect to a 50 foot wide strip on the aforesaid properties, which strip is

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 20 of 23

immediately adjacent to the NYCDEP property. The balance of the conservation easement area shall be revocable, the easement as to the revocable area may only be revoked if the following two conditions are met:

- MBIA has not constructed both the proposed office building and the associated parking structure; and

- MBIA sells the Gooney Hill lots to a third party for a standalone development.

- Notwithstanding said limitations on development, any such limitation or restriction would not prohibit improved pervious access such as pedestrian walking paths, water wells, utility lines, or stormwater management outfalls and other stormwater mitigation required by NYCDEP in connection with its approval of the Stormwater Pollution Prevention Plan to the extent that such mitigation cannot otherwise reasonably be placed outside of the conservation easement area, related to the duly approved re-development of the Project Site, or necessary to implement the mitigation features of the development, and any setback requirements shall not be affected by the conservation easement or restrictive covenants, nor shall any limitation so imposed reduce the lots area(s) for purposes of bulk and density requirements.

6. Existing stone walls on the site shall be retained in all areas not proposed for regrading or development, including all the stone walls along King Street and Cooney Hill Road. Existing perimeter stone walls shall be repaired and a new stone wall shall be constructed as necessary in order to provide a continuous stone wall along the entire King Street and Cooney Hill Road rights-of-way with the exception of the Takeda frontage.
7. All construction equipment shall be inspected periodically for fuel, oil and grease leaks. Fuel containers are to be located as far from wetlands and surface water as possible and are to be placed in fuel traps consisting of sand over impermeable materials such as plastic lining. On-site maintenance of construction equipment/vehicles shall not be permitted. These measures shall be enumerated in the contractor's contract.
8. The Proposed Action shall be required to comply with all requirements of the SPDES General Permit for stormwater discharge associated with construction activity in connection with controlling the project's environmental impacts during all phases of construction.

MBIA Headquarters Expansion***Site Plan, Wetlands Permit and Tree Removal Permit Approvals***

September 13, 2004

Page 21 of 23

9. The Applicant shall be required to provide a new well, if necessary, for any homeowner impacted by interference caused by MBIA's proposed wells to the satisfaction of the Westchester County Department of Health and the Town Engineer.
10. The maximum area to be disturbed at any one time shall not exceed 5 acres.
11. The Applicant shall not be permitted to disturb any Town-regulated wetland. However, the Applicant is permitted to disturb a total of 846 square feet of Town-regulated wetland buffer during Phase I and Phase II and 10,120 square feet of Town-regulated wetland buffer during Phase III.
12. The Applicant shall be permitted to remove 345 Town-regulated trees, 9 of which are Town-regulated Significant Trees.
13. The Applicant shall discontinue the use of sand for interior roadway maintenance. In addition, the Applicant shall utilize ice B' Gone 2.
14. No grading shall be conducted in tree protection areas, no soil stockpiling shall be permitted within the protected area and no construction equipment shall be permitted within the protected area.
15. With the exception of the improvements shown on the approved site development plan, no construction or other land disturbance shall take place within any Town-regulated wetland area or surrounding regulated buffer area or area affecting Town-regulated trees.
16. Extreme care shall be taken during the entire construction process to leave as much existing vegetation as possible in place. Any movement of construction equipment beyond the designated construction areas shall be avoided by installing orange snow fence along the entire Clearing and Grading Limit Line (C&GLL). No construction activity or grading is permitted beyond the approved C&GLL.
17. Vegetation shall not be removed from specific construction areas until as close to the actual scheduled work as possible.
18. Permanent vegetative cover shall be established immediately upon achieving the final grade in those areas which are not to be developed with roads, driveways or other impervious surfaces for each phase of development. Temporary seeding or mulching shall be used if disturbed areas are left for two (2) weeks or longer between work

MBIA Headquarters Expansion
Site Plan, Wetlands Permit and Tree Removal Permit Approvals
September 13, 2004
Page 22 of 23

operations. Contours and slopes in excess of 1:3 shall be stabilized with stabilization fabric.

19. All site work shall be completed in accordance with the Best Management Practices Manual for Erosion and Sediment Control prepared for Westchester County, New York (1991). All areas of soil disturbance resulting from this project shall be seeded with an appropriate perennial grass seed and mulched with hay or straw within one week of final grading. Mulch shall be maintained until suitable vegetative cover is established. All disturbed areas where soil is temporarily exposed or stockpiled for longer than one month shall be stabilized with a temporary seeding or ground cover.
20. All landscaping shown on this plan shall be maintained in a vigorous growing condition throughout the duration of the use. All plants not so maintained shall be replaced with new plants of comparable size and quality at the beginning of the next immediately following growing season.
21. To the extent not specifically modified herein, all applicable conditions of prior site plan approvals shall remain valid and in effect.

GA PLANNING PLAN 6.0 RESOLUTIONS RESOL 04 MBIA 3.PB SITE PLAN

APPENDIX B

2003 IPM Reports

July 15, 2003

Mr. Robert Peake
JMC
120 Bedford Road
Armonk, New York

Dear Bob;

On July 1, I had the opportunity to meet with you, Anthony, and Sal at the MBIA property. After talking with Sal and surveying the MBIA grounds, I have formed a rough draft of an IPM program for the MBIA property.

The main component to any IPM Program is to have a routine, organized, and documented monitoring program. There are two groups of plants to carefully monitor: turf grass and woody/herbaceous ornamentals. For the ornamentals, I have decided to build on the plant care program that Alpine the Care of Trees is presently contracted to perform. To address the turf, we will build on the fact that Sal is on the turf at least once a week for routine maintenance.

Provided is the monitoring schedule for the ornamentals and turf. The visits will take 1.0 - 1.5 hours per on-site visit and 0.5 hours office time for liaison with the other program participants. Additional office time will be needed to develop a monitoring report form (a sample is included) and write summary reports as required.

April - 2 visits

May - 2 visits

June - 2 Visits

July - 2 visits

August - 2 visits

September - 2 visits

During these visits Alpine Nursery will monitor both the turf and the ornamentals. Turf should be monitored at least weekly so Sal will be providing the monitoring between my visits. The ornamentals will be covered by Alpine Nursery with Alpine the Care of Trees providing some minor supplemental monitoring and treatments that may be required.

The next phase to work on will be to set up thresholds to be applied to both plant groups so there will be set protocols to initiate treatments. This phase will take a little longer to develop, but I will have some basics for the final report.

In order to establish thresholds for the lawn I have divided the MBIA grounds in to three priority levels and set % thresholds for each level. On Low priority areas we will tolerate 15% weeds or pest damage, medium areas 10%, and high priority areas 5%.

Provided are the additions to the list of products that we may use.

- Cambistat 2SC
- Z.P. Rodent bait
- Rejexit goose repellent
- Flight Control Plus goose repellent
- Plant health Care Micro Injectable Mycorrhizal inoculant
- Plant health Care Bio-pak a root zone therapy
- Lesco Bolster a root zone therapy
- Preemergant weed seed control such as Dimension, or Barricade
- Azatin or a neem oil product
- Balyeton turf fungicide

ALPINE nursery

683 Western Highway North
Blauvelt, New York 10913

(914) 359-8402

August 4, 2003

Mr. Robert Peake
JMC
120 Bedford Road
Armonk, New York

Dear Bob;

Provided is the IPM program for the MBIA property. Our goal is to provide improved plant health and appearance with **safe, least toxic, pest control methods**. Monitoring and interpreting the findings are key to the execution of the program. As previously mentioned, **there are two main plant groups involved and two levels of monitoring frequency**. Alpine Nursery will provide all monitoring (twice a month April – September) of **Ornamental trees, shrubs, perennials, and important shade trees**. The lawn areas will be monitored at the same time by Alpine Nursery. Land Productions will assist by **looking for abnormal conditions in between our scheduled site visits**.

The monitoring schedule will be twice a month during the growing season. The visits will take **1.5 - 2 hours per onsite visit and 0.75 hours office time for liaison with the other program participants**. All other office time for reports will be billed by the hour.

I have begun the monitoring **as of last week**. I will develop treatment thresholds as I visit the site over the next 2 months. Sal has indicated that MBIA has a relatively high tolerance for plant damage, **so a 10 - 15% plant damage base threshold will be used for the trees and shrubs**. I will work out weed plot counts and turf damage thresholds with **Sal from Land Productions over the next several months**.

The decision-making process will be coordinated by Alpine Nursery. If, as a result of the monitoring, **a treatment of any type is needed**, Alpine Nursery will write a prescription to be carried out by either Land Productions or Alpine, The Care Of Trees. I have instructed Mr. Cook to prepare **a new pricing schedule to reflect this change**. Alpine Nursery has modified a site map provided by JMC to use as a reference for monitoring and treatments. These will be distributed to Land Productions and Alpine, The Care Of Trees. As an example of the process, I have identified two existing problems that require prompt action. The first is a severe lace bug population in **area #1 (around the parking garage)**. This will require a spot application of horticultural oil and a natural pyrethrin. The second is a group of two purple leaf Plum trees in **area #4 (the parking lot behind the**

berm). These two trees have a disease called Black Knot, this fungus will certainly spread to other Cherry trees in the area. I recommend that they be taken down immediately.

In regards to the questions about which pesticide, how much, and when it will be applied, these facts are not set out in a firm schedule. The monitoring and decision-making process address each case as it occurs. Below, I have provided a list of treatment options that will be used to address each problem as they occur.

The products or methods that will be used to treat various pest problems are outlined below. A combination of the following "tools" will be used in conjunction with the thresholds. The pesticides on the list will be used only as a spot treatment according to monitoring and thresholds.

Non-pesticide Treatments

- Tolerance
- Revised & improved plant health care techniques
- Replacement of plants with resistant species or cultivars

Pesticides to be used for Treatments

- Horticultural or vegetable oil
- Horticultural soap
- Natural pyrethrins
- Conserve
- Floramite
- Avid
- Plant shield Fungicide
- Heritage, a fungicide for turf or ornamentals
- A grub control, Mach II (Lesco Trademark) – an insect growth-regulator type insecticide, to be spot applied according to monitoring
- Bio controls - augmentation, recognition, and preservation
- Manage for the control of nut sedge
- Round Up Pro or an equivalent
- Acclaim and Trimec post emergent herbicides for spot treatment only

At the end of the 2003 growing season, I will provide a summary report which will address changes in some maintenance practices so as to improve plant health and minimize potential pesticide treatments.

This program will address the needs of MBIA's plant health care and is an environmentally friendly program.

For any questions or concerns, please do not hesitate to call or email.

Don Gabel
Alpine Nursery

ALPINE nursery

683 Western Highway North
Blauvelt, New York 10913

September 30, 2003

(914) 359-8402

Mr. Robert Peake
JMC
120 Bedford Road
Armonk, New York

Dear Bob;

Recently I have completed two months of monitoring on the grounds of MBIA. As I mentioned I would do in my final IPM program I have meet with Sal to talk about the lawn issues, such as a fertility program and thresholds for treatments. We have also discussed the possibility of restoring some of the large tree on the property.. Additionally pesticide registration status can change and new products will emerge. Of course I can not predict all of the potential pest problems and plant needs that each season will bring, so I would like to add some tools to our purposed toolbox and at the same time ask for some latitude on having to name all the products that I may want to use in the coming seasons. Provided are the product names and a outline of the fertility program.

Tree and shrub fertility

The trees and shrubs will be fertilized with an organic fertilizer such as Holly Tone, healthy Start etc. once a season ,in the fall on a as needed basis.

Lawn fertility program

Dormant-mid to late November. A Fertilizer that has (75% water soluble) nitrogen at a rate of about a half pound of N per thousand square feet. A product such as Lesco 18-2-18 or similar.

Early spring early to mid April. A organic fertilizer such as Roots plus Iron or Plant Health Care Healthy start, at a rate of a quarter pound of N per thousand square feet.

Mid to late May. A fertilizer that has a sulfur coated urea form of N such as Lesco 32-5-7 or equal at a rate of one pound of N per thousand square feet.

Late June. A organic fertilizer such as Healthy Start, Sustane or Roots plus Iron at the rate of a quarter pound of N per thousand square feet.

Mid july. A fertilizer that has sulfur coated urea form of N such as Lesco 32-5-7 or equal at a rate of one pound of N per thousand square feet.

Mid August. A organic fertilizer such as Healthy Start, Sustane or Roots plus Iron at the rate of a quarter pound of N per thousand square feet.

Late August to early September. A fertilizer that has sulfur coated urea form of N such as Lesco 32-5-7 or equal at a rate of one pound of N per thousand square feet

Late October. A organic fertilizer such as Healthy Start, Sustane or Roots plus Iron at the rate of a quarter pound of N per thousand square feet.

I have divided the MBIA grounds in to three priority levels and set % thresholds for each level. On Low priority areas we will tolerate 15% weeds or pest damage, medium areas 10% weeds or pest damage and high priority priority areas 5%.

Additions to the list treatment products

Provided are the additions to the list of possible products that we may use.

- Cambistat 2SC
- Z.P.Rodent bait
- Rejexit goose repellent
- Flight Control Plus goose repellent
- Plant health Care Micro Injectable Mycorrhizal inoculant
- Plant health Care Bio-pak a root zone therapy
- Lesco Bolster a root zone therapy
- Preemergant weed seed control such as Dimension, or Barricade
- Azatin or neem oil product

RE: IPM Report for the end of the year 2003

Dear Maryann;

Provided is a report summarizing the 2003 August and September IPM program.

After spending 2 months monitoring I have had an opportunity to get familiar with the grounds under various conditions. Sal and I have also worked out thresholds that I will use when making control decisions. JMC and I have divided the MBIA grounds into three priority levels and set % thresholds for each level. On low priority areas we will tolerate 15% weeds or pest damage, medium areas 10%, and high priority areas 5%. During the 2- month period, I encountered 3 pest problems that required treatment. The first was a wide spread and very high population of Hawthorne lace bug. This pest far exceeded all the thresholds and Alpine, The Care of Trees made a pesticide treatment. The requested treatment was to apply a horticultural soap. Alpine, The Care of Trees made the treatment of M-pede soap on August 9th and used 50 gal. The second pest problem was a case of Black knot disease on Purple leaf plum in the west parking lot. I asked Sal to remove these diseased trees. Since that time, I have found several more trees infected with Black knot. I will be asking Sal to remove them as well. The final pest problem that required treatment was voles eating the lawn and junipers in the beds around the main building. There are few options to control this pest. We recommend using a bait product, Z P Rodent Bait. Sal made the treatment, applying 50 pounds. Despite the control that was achieved, we will have to monitor this pest in the coming year and quite possibly make a retreatment.

Although these were the only 3 pest problems that required control during the latter part of 2003, there are other areas that will be of concern this coming spring. Geese will be a problem for the lawns and the Hawthorne lace bug will be back. We will have to focus on getting them under control. Further monitoring last season showed the Hawthorne lace bug was pervasive throughout the landscape on many different hosts. On the southwest side of the main building, there are 4 Cherry trees with heavy Prunicola scale. This insect will have to be treated twice this spring, to help get the infestation under control. Two Douglas fir in quad #2 have a slight infestation of bag worm, and these will be hand removed. The rhododendron in the planting behind the entrance sign on the east side have Rhododendron borer. These shrubs will continue to do poorly. I would expect deer to be a problem through out the area, as well.

I will begin monitoring in March of 2004, and I will start to look closely at these and any other problems.

I look forward to working with you this year. If you have any question please call at 845-359-8402 or write me at blaugabels@msn.com.

Sincerely,

Don Gabel

March 18, 2004

Sal Rausa
Land Productions Inc
P.O. Box 124
Armonk New York 10504

Dear Sal

Enclosed please find the report on the 16 sugar maples, the 2003 year end report, a revised description of my services, a quadrant map and an invoice. I would also like to make a few pest control recommendation for the up coming year. Would you please pass on the tree and shrub recommendations to Alpine The Care of Trees. In the future when any applications are make, would you please send (or arrange for Alpine to send) me the following information.

1. name of product
2. location , including the quadrant # and host plants
3. amount of product applied

200~~3~~⁴ pest control recommendations

- I have seen quite a few geese on the various lawn areas. As soon as you have the time you could begin applications of repellents.
- The 4 cherry trees in the lawn on the back side of the main building in quadrant #3 need to have a dormant oil treatment for Prunicola scale. I will ask for another treatment in early June. I will be more precise as the time gets closer
- In quadrants #3&4 there are many Cotoneaster, Hawthorne and Amlanchier which will need to be treated again for Hawthorne lace bug. I recommend a mid May (monitoring will revile the exact time) application of a Neem product with prythrin. This problem may require a second application latter on in June.
- 2 Douglas fir trees on the screening berm between the pond and the parking lot have Bag worm. There are vary few and they could be hand picked off.
- Quad #1 has several trees with Black Knot disease. 1 Purple leaf Sand Cherry located at the North West corner of the old house and 2 Purple plums, on the slope facing the road and entrance. These plants should be removed ASAP this spring.

Sal I would like to meet with you to look at some of the deer damage and several other observations.

RE: IPM Report for the Months of March April 2004

Dear Maryann;

Provided is a report summarizing the Months of March and April IPM program.

The winter was hard in general to many shrubs. The damage to these plants was generally physical in nature and not really pest related. There was a lot of deer damage in quadrant #1&2. There are the few pest problems that were evident last year, that were taken care of in the month of April. On April 10 Alpine The Care of trees applied 200 gallons of Horticulture oil to two areas. The Norway spruce in quadrant #2, the target was to suppress the Eastern spruce gall Adelgid. This effort seems to have had good results. Oil was also applied to the cherry trees in quadrant # 3 to control Prunicola scale, with very poor results. We will have to go after the scale crawler stage in early June. The black knot disease on some of the cherries has been taken care of by removing the effected trees. As of now there are no signs of voles, I will keep monitoring, because these pests were quite devastating to the lawn and juniper beds. I am watching for the emergence of Hawthorne Lace bug in mid May, and in June the emergence of bag worm. These pests will require treatments. I also expect some damage to the main leaders of some of the spruce, from the white pine weevil. I will suggest that they be pruned out as soon as the damage is apparent. I am beginning to see some cultural problems with some of the trees, and I will report on this at a later date. Several Douglas Fir have some needle cast damage, I will wait to see how this season develops and if you need to consider any treatments. The boxwood in quad #2 at the back door of the building has freeze damage. They should be pruned. The *Illex glabra* in quad #1&2 have a bit of a tip canker. There is not much that can be done, prune out effected twigs and replace as needed. In the future these plants should be hand pruned and only lightly sheared.

Only a very few geese have been on the lawns and no real damage has occurred at this time. The 5% weed threshold has been met in the lawn area around the building in quad # 3. I will recommend that Sal do some broad leaf weed control in these areas.

Please call if you have any questions.

RE: IPM Report for the Month of May 2004

Dear Maryann;

Provided is a report summarizing the Month of May IPM program. Overall the planting and lawn are in great shape, we have only made a few minor treatments to date and they have worked well.

Quad #1 This area is in good condition. The treatment to the cotoneaster for lace bug last year seems to have done a good job, I have yet to see any significant populations. I see an increasing amount of geese on the lawn area, although there is little damage in this area.

Quad #2 This area has the majority of the pest problems on the grounds. The Early spring treatment to various conifers seems to have given good results. Recently I have been tracking several different pests on the Hawthorne and Amelanchier around the pond. I requested a treatment for these plants to control the emerging lace bug. The treatment was done on May 22 2004 by Alpine The Care of Trees. They used 50 gallons of Neem and pyrethrin.

Quad #3 The scale on the cherry trees was in the crawler stage and I asked for a treatment. On May 22 2004 Alpine The Care of Trees applied 20 gallons of Horticultural oil. There is still no sign of voles in the lawn and bed areas around the building.

Quad # 4 In general this quad is in good shape. The lawn area has a fair amount of goose activity and some of the feeding damage is becoming evident. There are several young Sugar maples that are not doing well. They have not acclimated well and are likely to continue to decline. A plan should be developed to start root zone therapy where it is needed and tree replacement should be considered in some cases.

Please call if you any questions regarding this report. 845-359-8402

RE: IPM Report for the Month of June 2004

Dear Maryann;

Provided is a report summarizing the Month of June IPM program.

In quad #1&2 Things are in good shape. The treatment have all worked very well and the trees are doing well. The main leader on some of the Norway spruce have become crooked. This indicates that its time to cut out the white pine weevil that have infested the trees .Simply cut and remove the crooked leaders.

Quad # 3 still shows no sign of voles in the lawns or beds. The treatment to the cherry trees for scale has worked very well. There are some box wood mites building up on the box wood along the back entrance. I will monitor further and ask Sal to hose them down with water to repel the mites.

In general the lawn areas in all four quads is in good shape. I did find a lot of dollar spot disease in quads 1,2&3 and ask Sal to treat it with Balyaton

Please call if you have any questions regarding this report.

RE: IPM Report for the Month of July 2004

Dear Maryann;

Provided is a report summarizing the July IPM program.

Quad #1: The lace bug is now developing into a pest problem. I will continue monitoring to see if the damage warrants treatment. Many of the tops of various conifers are still curling. I will ask Sal to cut them out as was done before. I have found borer holes in 2 of the sugar maples along the road. This is part of the problem that seems to be affecting them. I will continue to examine the sugar maples to form a complete diagnosis and recommendations. The boxwood mite problem was treated by Alpine, the Care of Trees. They applied 50 gallons of Floromite. The lawn area has a noticeable amount of nut sedge. I have suggested that Sal could treat this weed problem when it is convenient.

Quad #2: The lawn areas have a lot of damage from the geese. Additionally, the lawn has nut sedge. The deer are eating the clethra along the pond. The box wood in this quad where treated for mites.

Quad #3: The junipers along the building have a twig disease called Botryosphaeria canker. There are no chemical treatments for this type of disease. Cultural practices such as pruning and clean up will only help suppress the disease and does not provide much help in severe cases. A more comprehensive plan for replacement should be developed.

Quad #4: Two pines on the parking lot berm have been attacked and killed by shot hole borers. The best way to deal with this pest is to quickly remove the affected trees and dispose them off site. I have already advised Sal. There are several trees in the parking lot that are showing signs of nutrient deficiency. A comprehensive fertility plan for these and other trees around the site should be developed.

Please call if you have any questions regarding this report.

RE: IPM Report for the Month of September 2004

Dear Maryann;

Provided is a report summarizing the September IPM program.

Quad #1 The mite problem is now under control with low levels showing only next to the house. The cotoneaster has a moderate to high level of lace bug and we may need to treat next year. Areas around the old house should have deer protection installed for the coming winter. The large sugar maple in front of the house is not doing well, there are signs of decline and this tree should be put on a fertility/ root treatment list. All the lawn areas could use some lime to raise the PH.

Quad #2 The lawn areas could use some lime. There are a lot of weeds in the areas that are frequented by geese. This damage exceeds the thresholds set for the area and should continue to be treated for broad leaf weeds.

Quad #3 The lawn areas could use some lime. There is some backhoe activity around and over the root zones of two sugar maple tree along the entrance. I have alerted Sal and JMC and made some recommends to mitigate the problem. The cherry trees in the back of the building are doing better, but there is some damage that was caused by the problem prior to the treatments this year. We will resume treatment in the spring.

Quad #4 The parking area is in good shape and mostly needs select trees to be put on the fertility /root treatment list.

Over all there is a need for a significant amount of ornamental pruning in the parking areas, walk ways and road ways. Pruning and training trees when they are young is far better than allowing them to mature or allowing them to be damaged by people or trucks.

Please call if you have any questions regarding this report.

RE: IPM Report for the Month of August 2004

Dear Maryann;

Provided is a report summarizing the August IPM program.

Quad #1: In many parts of the lawn, the broad leaf weeds are exceeding thresholds for control. I will advise Sal that now is a good time to proceed with post-emergent weed control in advance of any lawn restoration. The damage to the cotoneaster is only moderate, but it does exceed the treatment thresholds. Since this pest will not be present in a good life stage for control, I will wait until next year. The plants are strong and are in no danger of catastrophic damage. There are still low levels of mites on the boxwood.

Quad #2: Deer damage around the pond continues. The shade blow trees around the back of the building have lost most all of their leaves. This is a combination of lace bug, and shade and dryness. The trees were not treated this year, as I was trying to evaluate the severity of the problem. The plants are strong and are in no danger of catastrophic damage. I will recommend treatment next year. There are a lot of weeds in this lawn area, as well. The boxwood mites seem to be at lower levels now. This will have to be monitored carefully next year.

Quad #3: The Cherry trees still have an appeasable amount of scale. The male scale has moved into position to mate. I will recommend an oil treatment in early September. This pest is still a major problem and will continue to be addressed in the next year. The lawn areas have a moderate amount of weeds and should be controlled as mentioned above. The boxwood mites seem to be at lower levels now. This will have to be monitored carefully next year. There are still low to moderate levels of mites on the boxwood.

I will be recommending a treatment of oil on all the boxwood in early September.

Please call if you have any questions regarding this report.

RE: IPM Report for the Month of March 2005

Dear Maryann;

Provided is a report summarizing the Month of March IPM program.

Quad # 1 The lawn areas looks pretty good. There is little goose damage at the moment. This will increase and possibly there will be a need to apply a repellent. PH tests and the evidence of moss in the lawn areas indicates the need for a application of lime . I will make the recommendations to Sal. Most trees and shrubs came through the winter fairly well. The boxwood on the side of the house still have spider mites and will need to be treated this spring. There is still considerable deer damage to various groups of plants. I would suggest replacement with deer resistant plants or start using deer fencing. In the cotoneaster there is evidence of Voles. I will advise Sal to make a treatment.

Quad # 2 The lawn area has damage from the geese. The lawn here could also use a application of lime. There is one small cherry tree near the pond that has Prunicola scale. It will be treated along with the other cherry trees in quad # 3. There is an increasing number of bag worms on 1 Douglas fir near the parking garage. I will suggest reducing the bulk of them by pruning off the egg cases this spring. I will monitor the rest of the bag worms to see if further treatments will be needed in June. The pachysandra in the back of the building needs to be fertilized. I will advise Sal.

Quad #3 The lawn area is in good shape. There is some goose damage This area could also use an application of lime. The cherries on the south slope still have Prunicola scale and will require treatment now and in June. Near the front entrance area there is a bed of juniper that has scale and will need treatment. I will advise Sal. The boxwood in the back by the entrance still have mites and will have to be treated this spring.

Quad # 4 The lawn is in pretty good shape. There is some goose damage. This area could also use an application of lime. The trees and shrubs in the parking lot are in good shape. The junipers in the front bed are being eaten by deer.

Dear Sal; Provided are two additional treatment recommendations for some pest control at MBIA. These should be added the to the next treatment.

Quad #1 The one Douglas fir between the old house garage and the parking garage. It is on the parking garage side of that group of conifers. This tree has needle cast, please treat it with Heritage Fungicide. This should be done 3 times at 2 week intervals.

Quad # 3 The 6 Cherry trees on the slope should be treated again with 1% oil. For a total of only 2 times this spring.

RE: IPM Report for the month April 2005

Dear Maryann;

Provided is a report summarizing the month of April IPM program.

Quad # 1 There is a Purple plum out along the screening berm, that was slightly pushed over and the trunk was damaged. This was most likely done during the stone wall construction. The Large American holly by the garage entrance has an increasing amount of holly leaf minor. I will continue to monitor. There are still no mites on the box wood although I have found eggs and we have applied horticultural oil. There is also one Douglas fir with considerably bad needle cast, I have been reluctant to prescribe a fungicide for one tree. I now see that we will have to start a fungicide program for that tree or risk losing it. I will add this to the treatment list for next week.

Quad # 2 The Hawthorne and Amelanchier around the pond and behind the building have a leaf curling aphid that has been having a considerable impact on these trees in the past. This is only one of several problems that I found last year, and we are treating for them this season. The box wood by the back door of the building would benefit from gypsum and organic fertilizer to help them recover from the physical damage that they have sustained of the last two years.

Quad #3 The cherry trees still have a considerable amount of scale and need to have several treatments this season. I have requested that they have a oil treatment twice and we will go after the crawler stage in early June. The junipers along the side of building continue to have die back from Botryosphaeria canker. There is not much we can do.

Quad #4 There is a trench being dug along the berm that is close to the roots of several pines. There does not seem to have been any significant damage. I will monitor them in the coming months.

In all the lawns look pretty good.

RE: IPM Report for the month June 2005

Dear Maryann;

Provided is a report summarizing the month of June IPM program.

Quad #1. The lawns are looking dry. Weeds are beginning to reach thresholds for treatment. There have been some areas of red thread disease but it has only caused minor damage. Some of the spruces along the front berm and by the parking garage have spruce gall adelgid. I will instruct Sal to prune out the affected parts ASAP.

Quad #2 The Shadblow and Hawthorne around the pond have responded well to the continued treatments. There are still adult lace bugs on the shadblow in the back of the building, but their numbers are down and I do not see any nymphs. The box wood by the back door could use some gypsum and a bit of iron & nitrogen. The soil may be poor in that area and nutrients seem to be a problem I will advise Sal.

Quad #3 lawn weeds are beginning to reach treatment thresholds.

Quad #4 Some of the spruces along the front berm, have spruce gall adelgid. I will instruct Sal to prune out the affected parts ASAP.

June 24, 2005

Cambistat™ 2SC

Active Ingredient:

Paclobutrazol: (R*, R*)-(±)-b-[(4-chlorophenyl)

Methyl]-a-(1,1-dimethylethyl)-

1H-1, 2,4-triazole-1-ethanol 22.3

Other Ingredients 77.7

Total 100.0%

Contains 2 lbs. active ingredient per gallon

EPA Reg. No. 100-1014-74779 EPA Est. 70732-MN-1
Product of UK Formulated in the USA

Trademarks of Rainbow Treecare Scientific Advancements

GENERAL INFORMATION

Cambistat 2SC is a xylem mobile plant regulator that slows vegetative growth as well as creating other physiological effects by inhibiting gibberellin biosynthesis. Cambistat 2SC reduces the above ground vegetative growth and changes specific morphological characteristics of the plant. Cambistat 2SC is most effective when applied to the soil near the base of the tree either by soil injection or with basal soil drench.

Cambistat 2SC can be used on listed trees found in such areas as urban environments, utility rights-of-way, residential areas and other no-crop areas.

Characteristics of results in the tree:

The activity of Cambistat 2SC occurs following root uptake and xylem translocation throughout the tree canopy. Results may not be fully visible for up to 18 months following application. Initial effects of Cambistat 2SC may be observed as intense greening of the foliage with no phytotoxicity. Trees treated with Cambistat 2SC will exhibit shorter internodes, a reduction in the diameter growth of the main stem wood, thicker leaf cuticles, and an increase in fine root growth in some species. Smaller leaf size and enhanced flowering may also be observed in some species.

General Use Precautions

- Apply at recommended rates and follow safety procedures.
- Trees not used for food production and that are not specifically listed on this label may be treated if all other label directions are followed.
- Local soil and environmental conditions can affect the degree and longevity of effect following application of Cambistat 2SC. Follow label instructions to increase effectiveness depending on these factors.
- Do not reapply Cambistat 2SC until symptoms from the previous applications begin to disappear, or within 3 years of the last application, whichever comes first.
- For hard-to-wet soils, the mobility of Cambistat 2SC can be enhanced by using a nonionic, organosilicone surfactant.
- Trees growing in heavily compacted soils may need to be vertical mulched or soil aerated for Cambistat 2SC to effectively promote root growth.
- Basal drench and soil injection application of Cambistat 2SC may result in localized, temporary discoloration of turfgrass immediately adjacent to the treatment site.
- Avoid basal drench applications on slopes or other areas where Cambistat 2SC or treated soil may be washed away from the base of the tree by rainfall or irrigation.
- Treatment of trees bordered by shrubs and/or herbaceous ornamentals may cause these plants to be affected if their roots extend into the treatment zone.
- Do not treat sugar maple trees or any other trees that are or could be tapped for sugar.
- Do not treat nut or fruit trees that will be harvested within one year.

- Do not treat trees that are severely stressed or rapidly declining.
- Do not apply this product through any type of irrigation system.

APPLICATION METHODS

Cambistat 2SC may be applied as a basal drench or by soil injection. Application should be made as close to the tree and the soil interface as possible to obtain the most consistent results.

Basal Drench

Apply the required dose [total ml required for the application rate and tree size (DBH)] uniformly around the base of the tree at the point of contact between the soil and the tree trunk (Figure 1). The diluted mixture of Cambistat 2SC may be carefully poured around the tree or an applicator that provides a controlled flow may be used. If there is potential for rainfall or irrigation to move the surface applied product to non-target plants, apply Cambistat 2SC diluted mixture to the bottom of a shallow furrow around the base of the tree. After applying, refill the furrow with untreated soil.

Figure 1- Placement of Cambistat 2SC as a basal drench

Soil Injection

The diluted mixture of Cambistat 2SC should be injected approximately 3 – 6 inches deep. Use injection equipment capable of delivery at 100 – 200 psi. Injection orifices should be oriented to release the diluted product horizontally at the point of injection. The required dose should be divided evenly among injection sites spaced as uniformly as possible around the tree trunk. The injection sites should be positioned to release the Cambistat 2SC diluted mixture as close as possible to the point of contact between the soil and the tree beneath the soil so that the active ingredient may be readily absorbed by the tree (Figure 2). Injection sites should also be located next to buttress roots (Figure 2). For trees less than 6 inches DBH, use at least 4 evenly spaced injection sites per tree.

Figure 2- Placement of Cambistat 2SC as a soil injection treatment.

APPLICATION TIMING

Applications can be made throughout the year, weather permitting, except when the soil is frozen or saturated with water. Note: Cambistat 2SC is absorbed by plant roots and translocated to the growing tissues in response to evaporative water loss (transpiration). If applications are made after fall leaf drop, uptake of Cambistat 2SC will not occur until development of new leaves in the spring and resumption of evaporative water loss.

MIXING PROCEDURES

Mix one quart of Cambistat 2SC to make 3 gallons of diluted mixture. To improve suspension of the diluted mixture, the addition of a suspension aid at a rate of approximately 1/2 pint to 2 pints per 100 gallons is recommended. To re-suspend a solution, use 1 to 2 pints per 100 gallons. Follow all label directions and precautions on the product label of the suspension aid.

If applying mixture to compacted soils, high clay content soils, or other hard-to-wet soils, use a nonionic, organosilicone wetting agent (surfactant) to increase penetration of the soil. Mix approximately 1 pint surfactant per 100 gallons. Follow all label directions and precautions on the product label.

CONTACT RAINBOW FOR UP-TO-DATE RATE CARD

FIRST AID	
If swallowed	<ul style="list-style-type: none"> • Call poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to do so by the poison control center or doctor. • Do not give anything by mouth to an unconscious person.
If on skin or clothing	<ul style="list-style-type: none"> • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 – 20 minutes. • Call a poison control center or doctor for treatment advice.
If in eyes	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center or doctor for treatment advice.
Have the product container or label with you when calling a poison control center or doctor or going for treatment.	
Hotline Number For 24 hour Medical Emergency Assistance (Human or Animal) or chemical Emergency Assistance (Spill, leak, fire, or accident) Call 1-800-888-8372	

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION

Harmful if swallowed or absorbed through the skin. Avoid contact with skin, eyes, or clothing.

Personal Protective Equipment

Some materials that are chemical resistant to this product are listed below. If you want more options, follow the instructions for Category F on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:

- Long sleeved shirt and long pants
- Chemical-resistant gloves such as Barrier Laminate or Butyl Rubber or Nitrile Rubber or Viton
- Shoes Plus Socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations

Users Should

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean water high mark. Do not contaminate water when disposing of equipment washwaters.

Physical or Chemical Hazards

Do not use or store near heat or open flame.

Notice: Read the entire label. Use only according to label directions. **Before buying or using this product, read "Warranty Disclaimer" and "Limitations of Remedies" elsewhere on this label.**

In case of emergency endangering health or the environment involving this product call

1-877-272-6747.

To obtain further information on this product, please visit our website at www.rainbowcivance.com

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state and tribe, consult the agency responsible for pesticide regulation.

Agricultural Use Requirements

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

- Coveralls
- Chemical-resistant gloves such as Barrier Laminate or Butyl Rubber or Nitrile Rubber or Viton
- Shoes plus socks

STORAGE AND DISPOSAL

Prohibitions

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

Storage

Keep container closed when not in use. Do not store near food or feed. Protect from freezing. In case of spill or leak on floor or paved surfaces, soak up with sand, earth or synthetic absorbent. Remove to chemical waste area.

Pesticide Disposal

Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be used according to label instructions, contact your state pesticide or environmental control agency, or the hazardous waste representative at the nearest EPA regional office for guidance.

Container Disposal

Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

WARRANTY DISCLAIMER

Rainbow Treecare Scientific Advancements warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below.

Rainbow Treecare Scientific Advancements

**MAKES NO OTHER EXPRESS OR IMPLIED
WARRANTY OF MERCHANTABILITY OR FITNESS
FOR A PARTICULAR PURPOSE OR ANY OTHER
EXPRESS OR IMPLIED WARRANTY.**

INHERENT RISKS OF USE

It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions etc.) abnormal conditions (such as excessive rainfall, drought, tornadoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Rainbow Treecare Scientific Advancements or the seller. All such risks shall be assumed by the buyer.

LIMITATIONS OF REMEDIES

The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Rainbow Treecare Scientific Advancement's elections, one of the following:

- 1 -Refund of purchase price paid by buyer or user for product bought, or
- 2 -Replacement of amount of product used.

Rainbow Treecare-Scientific Advancements shall not be liable for losses or damages resulting from handling or use of this product unless Rainbow Treecare Scientific Advancements is promptly notified of such loss or damage in writing. In no case shall Rainbow Treecare Scientific Advancements be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer above and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Rainbow Treecare Scientific Advancements or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.

USE: Acute Rodenticide	BAIT FORM: Dry Granular Blend		EPA REGISTRATION NO: 12455-18

SECTION I. HAZARDOUS INGREDIENTS

INGREDIENT NAME	% BY WEIGHT	CURRENT TLV
Zinc Phosphide CAS No. 1314-84-7	2.0 %	N/A

This product contains no components subject to the reporting requirements of Section 313 of the Superfund Amendment and Reauthorization Act (SARA) of 1986

SECTION II. PHYSICAL DATA

APPEARANCE: Pellet	COLOR: Blue	ODOR: Slight Garlic	SPECIFIC GRAVITY: N/A
VAPOR DENSITY: N/A	MELTING POINT: N/A	WATER REACTIVITY: N/A	EVAPORATION RATE: N/A
VAPOR PRESSURE: N/A	BOILING POINT: N/A	SOLUBILITY: Not soluble in water	BULK DENSITY: 0.774 gm/cc

SECTION III. FIRE AND EXPLOSION DATA

FLASH POINT (Method Used): N/A	FLAMMABLE LIMIT: Upper Limit: N/A Lower Limit: N/A	AUTOIGNITION TEMP: N/A
--	--	----------------------------------

EXTINGUISHING MEDIA:

Extinguish with water, foam or inert gas

SPECIAL FIREFIGHTING PROCEDURES:

Firefighters should be equipped with protective clothing and self-contained breathing apparatus.

UNUSUAL FIRE OR EXPLOSION HAZARDS:

None

SECTION IV. REACTIVITY HAZARD DATA

STABILITY: Stable	CONDITIONS TO AVOID: None
POLYMERIZATION: Will not occur	CONDITIONS TO AVOID: None
INCOMPATIBILITY (MATERIALS TO AVOID): Strongly acidic materials	HAZARDOUS DECOMPOSITION PRODUCTS: Phosphine gas

SECTION V. TOXICITY DATA

LD50, ORAL (INGESTION): >5000 mg/kg (rats)	LD50, DERMAL (SKIN CONTACT): > 1500 mg/kg (rats)	LC50, INHALATION: N/A
EYE IRRITATION: None (rabbits)	SKIN IRRITATION: None (rabbits)	DERMAL SENSITIZATION: Not Considered a Sensitizer

ZP[®] Rodent Bait

SECTION VI. HEALTH HAZARDS

PRIMARY ROUTE OF ENTRY:

Ingestion

SIGNS & SYMPTOMS OF EXPOSURE:

Nausea, abdominal pain, tightness in chest, chills

EMERGENCY FIRST AID PROCEDURES:**Eyes:** Flush with cool water for at least 15 minutes. If irritation develops, obtain medical assistance.**Skin:** Wash with soap and water.**Ingestion:** Call physician or emergency phone number immediately. Do not give anything by mouth or induce vomiting unless instructed by physician.**Inhalation:** Remove person to fresh air.**NOTE TO PHYSICIAN:**

None

SECTION VII. CONTROL AND PROTECTIVE MEASURES

RESPIRATOR TYPE:

Not required

EYE PROTECTION:

Not required

GLOVES (Recommended):

Rubber Gloves

VENTILATION:

Not required

OTHER PROTECTIVE MEASURES:

Not required

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) RATINGS:**HEALTH:** 2 (Moderate)**FIRE:** 0 (Will not burn)**REACTIVITY:** 0 (Stable)**SPECIFIC HAZARD:** None**HAZARDOUS MATERIAL INFORMATION (HMIS) RATINGS:****HEALTH:** 2 (Moderate)**FLAMMABILITY:** 0 (Minimal)**REACTIVITY:** 0 (Minimal)**PROTECTIVE EQUIPMENT:** B

SECTION VIII. SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN THE EVENT MATERIAL IS RELEASED OR SPILLED:

Ventilate area and remove all sources of ignition. Sweep up spilled material, place in properly labeled container for disposal or re-use.

WASTE DISPOSAL METHOD:

Wastes resulting from use may be disposed of on-site or at an approved waste disposal facility. Dispose of all wastes in accordance with all Federal, state and local regulations.

SECTION IX. SPECIAL PRECAUTIONS AND STORAGE DATA

STORAGE TEMPERATURE:

Room temperature

AVERAGE SHELF LIFE:

Bait is stable for a minimum of 1 year when stored at room temperature

SPECIAL SENSITIVITY (HEAT, LIGHT, MOISTURE):

Avoid exposure to acidic conditions, light, heat and extreme humidity. Exposure to acidic conditions may result in the liberation of phosphine gas.

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORAGE:

Store in a cool, dry place inaccessible to children, pets and wildlife. Keep container tightly closed when not in use. Avoid contamination of lakes, streams and ponds by use, storage or disposal. Wash thoroughly with soap and water after handling.

SECTION X. SHIPPING DATA

DOT SHIPPING NAME:

None required

DOT HAZARD CLASSIFICATION:

Non-hazardous

DOT LABELS REQUIRED:

None required

FREIGHT CLASSIFICATION:

LTL Class 60

ReJeX-iT[®] AG-36 EPA Reg. No. 58035-9

Direction for Use on Turf¹

ReJeX-iT[®] AG-36 is a tool for the behavior modification of Canada geese (*Branta Canadensis*) and other nuisance birds. While it changes the taste of the treated turf to become unpalatable to geese, it is only distasteful as long as the grass remains treated. The effect is not systemic and as the grass grows it is renewed with fresh untreated grass that is good food for geese. To be effective the applications have to be done to change the behavior of the geese to leave the area completely to find better feeding and living conditions. Any harassment method used before the application of ReJeX-iT[®] AG-36 should be continued to accelerate the departure of the geese during the time the grass is unpalatable. Any feeding of the birds negates all efforts for success. While it is relatively easy to repel the geese when they first come to an area, it is far more difficult to repel them once they have established themselves in an area.

The conditions for treatment of the various grassy surfaces with ReJeX-iT[®] AG-36 vary considerably by type of grass, from State to State, by seasons and time of day. As a taste aversion agent, the important consideration is the effective concentration of ReJeX-iT[®] AG-36 on the food the geese or other birds ingest and the complete coverage of the effected area. For best results, a quantity of 20 lbs ReJeX-iT[®] AG-36 per acre is recommended. Depending on spray equipment used and the use of additional spreaders, or in repeat applications, quantities as low as 10 lbs per acre might be sufficient.

The product has been formulated for optimum results with a spreader/sticker already mixed into the product. For use, ReJeX-iT[®] AG-36 only needs to be diluted with sufficient amounts of water to spray the desired area. Generally a dilution rate of 1:3 is recommended. However, some high performance sprayers are capable to spray the same amount of product at a rate of 1:1. For best results, the grass should be mowed before application and it has to be dry with no rain in the forecast for the next 3 hours.

Label Directions:

TURF DILUTION DIRECTIONS: Shake or stir

ReJeX-iT[®] AG-36 container well prior to diluting. Mix ReJeX-iT[®] AG-36 with water at a ratio of 1 part product to 3 parts water. For example, mix 1 quart of product with 3 quarts of water to make 1 gallon of spray mixture. Mix product outside or in ventilated area.

TURF APPLICATION DIRECTIONS: Apply at a

rate of 20 lbs AG-36 (10 gallons spray mixture, 2.9 lbs a.i.) per acre of turf area. Spray evenly on area to be protected to provide thorough coverage and allow material to dry before permitting human activity on treated area. Repeat in 4 days or as warranted by Canada goose activity. Do not mow the treated area for several days after application.

EXAMPLES

For one (1) acre of normal turf (lawn)

Mow grass before application. Stir ReJeX-iT[®] AG-36 well. Pour 2.5 gal (20lbs) of ReJeX-iT[®] AG-36 into the mix tank and fill tank to 10 gal volume with

The information contained in this publication is true and accurate to the best of our knowledge. ReJeX-iT[®] AG-36

water. Spray evenly to cover one acre of turf or lawns to wet out the grass evenly without run-off into the ground. Rinse tank, lines and nozzle immediately after spraying. Do not apply when rain is expected within the next 3 hours. Repeat in 5 days if geese persist or come back.

For one (1) gal of spray mix:

Stir or shake ReJeX-iT[®] AG-36 well and add one quart ReJeX-iT[®] AG-36 to the spray tank and fill to one gallon with water. Spray evenly on the grass surfaces to be protected against geese. The spray mix should cover 4,000 sq. ft. of turf.

Typical Coverage for Turf:

ReJeX-iT [®] AG-36	Spray mix	Coverage
1 quart (2.1 lb)	1 gal	4,000 sq. ft.
1 gal (8 lb)	4 gal	16,000 sq. ft.
20 lb (2.5 gal)	10 gal	1 acre
40 lb (5.0 gal)	20 gal	2 acre

ReJeX-iT[®] AG-36 must stick to the grass to be effective. Any run-off onto the ground is lost as active aversion agent.

When geese graze and taste grass treated with ReJeX-iT[®] AG-36, the geese sometimes will shake their head and leave the area or head for the nearest water to attempt to rid themselves of the taste of ReJeX-iT[®]. If they try to feed once more on the treated area, the response is much faster and they usually leave the area

repel geese, but also attracts geese more to a specific lawn. Do not mow treated area for several days after treatment. If you mow, do not collect the clippings.

WEATHER CONDITIONS: Apply to dry turf and preferably under conditions favoring prompt drying of AG-36 spray mixture (no rain in the forecast). If product is applied to wet turf or during damp, misty or rainy conditions, or if AG-36 spray mixture freezes during application, the effectiveness may be partially or completely lost. **CAUTION: If product or AG-36 spray mixture freezes, turf damage may occur.**

PROTECTIVE CLOTHING: When mixing or applying ReJeX-iT[®] AG-36 spray mixture wear safety glasses.

VENTILATION: Prepare the ReJeX-iT[®] AG-36 spray mixture in a well ventilated area.

SPRAY EQUIPMENT: Less than 1/3 acre - Trigger, bucket pump, slide pump, or compressed air sprayer. More than 1/3 acre - Compressed air, wheel-barrow, power sprayer or power blast sprayer.

OBSERVATIONS: After the first or second treatment, it has been observed that less ReJeX-iT[®] AG-36 may be used to repel birds. If an effective level of ReJeX-iT[®] AG-36 has been achieved, it will be evident in the behavior of the geese. Geese that have come in contact with excessive amounts of ReJeX-iT[®] AG-36 have been observed shaking their head, and rapidly passing through treated areas, or fly away. It is common for birds that have had an initial taste of ReJeX-iT[®] AG-36 to avoid the treated area altogether. Geese may also move quickly to a pond or lake to drink, and begin splashing and preening. If geese do not avoid the treated area, additional applications are recommended. Additional applications may also be required if migrating or non-resident geese arrive after initial treatment. The threshold level to achieve repellency is higher for geese that have not had an

ReJeX-iT® AG-36

initial contact with ReJeX-iT® AG-36. The birds get sensitized and cannot habituate to the taste of ReJeX-iT® AG-36.

STORAGE: Store only in original container, in a dry place inaccessible to children, pets, and domestic animals. Store apart from pesticides, fertilizers, food or feed that may cause cross-contamination from odor. **Keep ReJeX-iT® AG-36 or spray mixture from freezing.**

REPELLENT DISPOSAL: ReJeX-iT® AG-36 spray mixture, or rinse water that cannot be used according to label instructions must be disposed of according to Federal or approved State procedures. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Triple rinse. Then offer for recycling or reconditioning, or puncture and dispose in a sanitary landfill, or by other

procedures approved by State and local authorities. The container can be reused if rinsed well.

WARRANTY STATEMENT: The manufacturer warrants that this product conforms to the chemical description on its label. When used in accordance with label directions under normal conditions, this product is fit for its intended purpose.

Since timing, method of application, weather and ground conditions, mixture with other chemicals, and other factors affecting the use of this product are beyond our control, no warranty is given concerning the use of this product contrary to label directions, or under conditions which are abnormal or not reasonably foreseeable. The buyer and/or user assumes all risks of any such use.

Barricade® 65WG

Barricade®

65WG

Herbicide

For selective preemergence control of grass and broadleaf weeds in:

- established turfgrasses (excluding golf course putting greens), lawns and sod nurseries
- container, field-grown, and landscape ornamentals
- established perennials and wildflower plantings
- Christmas tree farms
- plants grown for cut foliage production (Florida only)

Active Ingredient:

Proflaminate

(CAS No. 29091-21-2) .. 65.0%

Other Ingredients: 35.0%

Total: 100.0%

See directions for use in attached booklet.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. Refer to supplemental labeling under "Agricultural Use Requirements" in the Directions for Use section for information about this standard.

EPA Reg. No. 100-834

CAUTION**

Precautionary Statements

Hazards to Humans and Domestic Animals

Harmful if inhaled or absorbed through the skin. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Prolonged or frequently repeated skin contact, while mixing or handling the concentrated material, may cause allergic reactions in some individuals.

First Aid

If on skin: Wash with soap and water. Rinse thoroughly.

If inhaled: Remove victim to clear air.

If in eyes: Flush thoroughly with water for several minutes. Contact a physician if irritation persists.

Environmental Hazards

This product has low solubility in water. At the limit of solubility, this product is not toxic to fish. However, at concentrations substantially above the level of water solubility, it may be toxic to fish. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent sites. Do not contaminate water when disposing of equipment wash water.

Storage and Disposal

Do not contaminate water, food, or feed by storage or disposal.

Store in original container away from fertilizer, feed, or food stuffs and separated from other pesticides. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Triple rinse (or equivalent) and dispose of container in a sanitary landfill or incinerate, or if allowed by state and local authorities, burn locally. Stay out of smoke from burning container.

For minor spills, leaks, or other accidental contamination, follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes. In the event of a major spill, fire, or other emergency, call 1-800-888-8372, day or night.

Chemigation: Do not apply this product through any type of irrigation system.

Barricade® 65WG

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION

Harmful if inhaled or absorbed through the skin. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Prolonged or frequently repeated skin contact, while mixing or handling the concentrated material, may cause allergic reactions in some individuals.

First Aid

If on skin: Wash with soap and water. Rinse thoroughly.

If inhaled: Remove victim to clear air.

If in eyes: Flush thoroughly with water for several minutes. Contact a physician if irritation persists.

Personal Protective Equipment (PPE)

WPS USES:

Applicators and other handlers (other than mixers and loaders) who handle this pesticide for any use covered by the Worker Protection Standard (40 CFR part 170) – in general, agricultural-plant uses are covered – must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

Mixers and Loaders must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

NON-WPS USES:

Mixers and loaders who handle this pesticide for any use NOT covered by the Worker Protection Standard (40 CFR part 170) – in general, only agricultural-plant uses are covered by the WPS – must wear:

- Waterproof gloves

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Control Statements

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- After handling this product, immediately wash the outside of gloves before removing them, then remove gloves and all other PPE. Immediately wash thoroughly and change into clean clothing.

Environmental Hazards

This product has low solubility in water. At the limit of solubility, this product is not toxic to fish. However, at concentrations substantially above the level of water solubility, it may be toxic to fish. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff from treated areas may be hazardous to aquatic organisms in adjacent sites. Do not contaminate water when disposing of equipment wash water.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, Inc. or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

Barricade® 65WG

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and Buyer and User assume the risk of any such use. SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall SYNGENTA or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. **THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.**

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Waterproof gloves
- Shoes plus socks

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Storage

Store in original container away from fertilizer, feed, or food stuffs and separated from other pesticides.

Pesticide Disposal

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal

Paper bags and boxes: Completely empty container into application equipment. Then dispose of empty bag or box in a sanitary landfill or incinerate; or, if allowed by state and local authorities, burn locally. Stay out of smoke from burning container.

Plastic jugs: Triple rinse (or equivalent) and dispose of container in a sanitary landfill or incinerate, or if allowed by state and local authorities, burn locally. Stay out of smoke from burning container.

For minor spills, leaks, or other accidental contamination, follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes. In the event of a major spill, fire, or other emergency, call 1-800-888-8372, day or night.

Chemigation

Do not apply this product through any type of irrigation system.

Barricade® 65WG

GENERAL INFORMATION

WHERE TO USE

Barricade 65WG is a selective preemergence herbicide that provides residual control of many grass and broadleaf weeds in:

- established turfgrasses (excluding golf course putting greens), lawns and sod nurseries, and in container, field grown, and landscape ornamentals
- hardwood seedling nurseries and established perennial and wildflower plantings
- plants grown for cut foliage production
- Christmas tree farms

HOW BARRICADE 65WG WORKS

Barricade 65WG controls susceptible weeds by preventing growth and development of newly germinated weed seeds. Weed control is most effective when Barricade 65WG is activated by at least 0.5 inch of rainfall or irrigation or shallow incorporation (1 to 2 inches) before weed seeds germinate and within 14 days following application.

USE PRECAUTIONS

1. Do not graze or feed livestock forage cut from areas treated with Barricade 65WG.
2. Follow all applicable directions, restrictions, and precautions on the labels of EPA-registered tank mix partners.
3. Do not blend Barricade 65WG onto dry fertilizer or any other granular material.
4. **Chemigation:** Do not apply this product through any type of irrigation system unless instructed otherwise in this label.
5. Do not apply aerially.
6. Do not apply to golf course putting greens.

NEW PLANTINGS, REPLANTING, AND ROTATIONAL PLANTINGS

Nursery, landscape, or non-cropped land areas treated with Barricade 65WG should be rotated only to ornamental species listed on this label for 1 year following application unless the following test has shown species safety:

Before planting a species not listed on this label, it is recommended that several test strips of an indicator plant such as wheat, sorghum, or corn be sown into the treated area. If the indicator plants germinate and grow normally to a height of 12 inches with normal root development, it is safe to plant.

In areas disturbed by new plantings or replanting of labeled species, it may be necessary to retreat exposed soil to maintain satisfactory weed control.

MIXING AND APPLICATION PROCEDURES

MIXING

Barricade 65WG must be mixed thoroughly in the spray tank to ensure uniform application. Follow these steps:

1. Fill the spray tank $\frac{1}{4}$ full with clean water or fluid fertilizer only.
2. Start agitation and check to ensure it is working properly.
3. Add Barricade 65WG directly into the tank.
4. Add the rest of the carrier to obtain the final spray volume.
5. A spray colorant may be used with Barricade 65WG to mark areas as they are treated. This will improve application accuracy by minimizing swath skips and overlaps.
6. Maintain vigorous agitation in the spray tank before and during the application. This will ensure a well-mixed spray suspension.
7. Do not allow spray suspension to dry in the tank. Thoroughly clean the sprayer after use by flushing the system with water containing a detergent. Refer to the **Pesticide Disposal** section of this label for waste disposal.

TANK MIXING BARRICADE 65WG

Barricade 65WG may be tank mixed with certain other EPA-registered herbicides to provide a broader spectrum of weed control or to control emerged weeds. Refer to the specific directions for use for tank mix partners, and consult the label(s) of the individual tank mix partner(s) for use rate, application timing, weeds controlled, and specific precautions and/or restrictions. Tank mixes are permitted only in states where the tank mix partner(s) are registered for the application site and the turf and ornamental species listed. When using Barricade 65WG in a tank mixture with other pesticides, observe the most restrictive label limitations and precautions on the labels of the products used.

Before tank mixing pesticides, it is advisable to test compatibility by mixing the products in a small container first. See the **Compatibility Test** section.

Barricade® 65WG

COMPATIBILITY TEST

Before mixing Barricade 65WG with other pesticides in the spray tank, test the compatibility by mixing all components (carrier and pesticide products) in a small container in proportionate quantities. For example, a 1-qt. jar would be 1/100 the volume of a 25 gals./A spray rate. At 1 lb./A the Barricade 65WG rate would be proportional to 4.5 g per qt. Add approximately 1.5 teaspoons to a qt. of water. Calculate amounts for other products based on rate per acre. An approximate volume would be 1.5 teaspoons for each lb./A of a dry formulation and 0.5 teaspoons for each pt./A of a liquid formulation. (See following table.)

Amount of Component to Add to One Quart Jar of Spray Carrier
(Assuming Carrier Volume of 25 gals./A)

Component Formulations	Rate Per		Level Teaspoons
	Acre	1,000 sq. ft.	
Barricade 65WG	1.0 lb.	0.4 oz.	1.5
Dry Tank Mix Partners	1.0 lb.	0.4 oz.	1.5
Liquid Tank Mix Partners	1.0 pt.	0.4 oz.	0.5

If components do not ball-up or form flakes, sludge, gels, oily films or layers, then the mixture is compatible. Incompatibility will usually occur within 5 minutes after mixing. If the components are not compatible, use a compatibility agent and rerun the test to determine if the mixture is suitable. If components are still not compatible, do not tank mix.

MIXING ORDER FOR TANK MIXTURES

Notes: (1) When mixing Barricade 65WG with other components (carrier and partner pesticide products), allow products to completely dissolve between steps. This is key when tank mixing with ester formulations. (2) Maintain agitation throughout mixing and application of the mixture.

Add the products to the spray tank in the following order:

1. Add products packaged in water-soluble bags first. Agitate the tank mixture. Allow the water-soluble bags to completely dissolve and the product to disperse before adding any other tank mix partner.
2. Then add water-dispersible granules (WDG or WG formulations) and wettable powders (WP formulations). Add wettable powders to the tank as agitation continues. Allow the product to disperse completely before other products are added.
3. Add spray adjuvants and spray markers. Read the adjuvant's label first and use only those adjuvants approved for application to turf and ornamentals.
4. Add flowable liquids (FL) or suspension concentrates (SC).
5. Add emulsifiable concentrates (EC) last.

APPLICATION

Apply Barricade 65WG in a minimum of 20 gals./A (0.5 gal./1,000 sq. ft.) of carrier (water and/or fluid fertilizer) using a calibrated, low-pressure sprayer with 50-mesh or coarser screens. A broadcast boom or handheld wand designed for herbicide or insecticide application will provide the best results. Select nozzle pressure and gallonage to provide complete coverage.

SPECIFIC USE DIRECTIONS

ESTABLISHED TURF

Barricade 65WG is a selective preemergence herbicide that, when properly applied, will control certain grass and broadleaf weeds in established turfgrasses including:

- Golf courses excluding putting greens
- Lawns
- Sod nurseries

The maximum amount of Barricade 65WG that may be applied per year is given for each turfgrass species in the **Annual Use Rates** section of this label.

For optimum weed control, Barricade 65WG should be activated by at least 0.5 inch of rainfall or irrigation before weed seeds germinate and within 14 days following application. See the map below for approximate crabgrass seed germination dates.

Barricade® 65WG

CRABGRASS SEED GERMINATION DATES

Approximate Date

Use Precautions – Turfgrass

1. Do not apply Barricade 65WG to areas where dichondra, colonial bentgrass, velvet bentgrass, or annual bluegrass (*Poa annua*) are desirable species.
2. Do not cut (harvest) treated sod before 90 days after application. To avoid turfgrass injury, do not apply to newly set sod until the sod has rooted and exposed edges have filled in.
3. To avoid turfgrass injury, do not apply Barricade 65WG to turf stressed by conditions such as drought, low fertility, or pest damage.
4. Disturbing the herbicide barrier with cultural practices such as disking may result in reduced weed control.
5. Do not apply Barricade 65WG to golf course putting greens.
6. If the depth of the creeping bentgrass root system becomes shallow and root tips contact Barricade-treated soil, new root formation may be inhibited. Mowing height can affect the depth of a plant's root system. To avoid this, do not apply Barricade 65WG to creeping bentgrass less than 0.5 inch in height.

Application Timing and Rate – Turfgrass

Barricade 65WG may be applied as a single application or in sequential applications to control weeds germinating throughout the year. All applications should be made before target weeds germinate. Barricade 65WG will not control weeds that have already emerged.

The amount of Barricade 65WG to apply depends upon:

1. the length of residual weed control desired (the higher the application rate, the longer the control),
2. the turf species, and
3. the maximum amount which can be applied to the turf species per calendar year.

Length of Crabgrass Control*

*Length of control varies by region. This table is an average for planning purposes.

Annual Use Rates – Turfgrass

Barricade 65WG can be applied to the turfgrass species listed in the following table. Do not apply more than the highest rate listed for each species in a calendar year.

Barricade® 65WG

Maximum Application Rate of Barricade 65WG Per Calendar Year by Turfgrass Species¹

Turf Species	Lbs. product/A	oz. product/1,000 sq. ft.
Bermudagrass ² Bahia grass Centipedegrass Kikuyugrass Seashore Paspalum St. Augustinegrass ³ Tall Fescue (including turf-type) Zoysiagrass	1.0-2.30 ¹	0.36-0.83
Buffalograss Kentucky Bluegrass Perennial Ryegrass	0.5-1.50 ¹	0.185-0.55
Fine Fescue	0.5-1.15 ¹	0.185-0.42
Creeping Bentgrass (0.5 inches or more in height) ⁴	0.5-1.00 ¹	0.185-0.37

¹Barricade 65WG may be applied more than once a year as long as the total amount applied is not greater than the maximum application rate for each turf species. All applications must be made before weed seeds germinate.

²May be used on newly-sprigged or plugged Bermudagrass at rates not to exceed 0.80 lb./A (0.30 oz./1,000 sq. ft.). Newly-sprigged or plugged Bermudagrass stolon rooting may be temporarily retarded.

³Use an initial rate of 0.75-1.5 lbs./A per application.

⁴To avoid grass injury, do not apply Barricade 65WG to creeping bentgrass mowed at less than 0.5 inch in height.

Weeds Controlled

When used as directed in this label, Barricade 65WG will control the following weeds:

Barnyardgrass	Kochia
Bluegrass, Annual (<i>Poa annua</i>) ¹	Lambsquarters, Common
Carpetweed	Lovegrass
Chickweed, Common ²	Panicum (Texas, Fall, Browntop)
Chickweed, Mouseear (from seed)	Pigweed
Crabgrass (Large, Smooth) ³	Purslane, Common
Crowfootgrass	Pusley, Florida
Cupgrass, Woolly	Rescuegrass ⁴
Foxtails, Annual	Shepherdspurse ²
Goosegrass ⁵	Signalgrass, Broadleaf
Henbit ²	Speedwell, Persian
Itchgrass	Sprangletop
Johnsongrass (from seed)	Spurge, Prostrate
Junglerice	Witchgrass
Knotweed ²	Woodsorrel, Yellow (from seed)

¹In areas where *Poa annua* is a winter annual, apply Barricade 65WG (see rate table) in August or September to established, non-overseeded turf before *Poa annua* seeds germinate. These timings are approximate. Consult State Extension Service for more specific timing for your area. Also see the section of this label *Poa Annua* Control in Established Bermudagrass Overseeded with Perennial Ryegrass (AZ, CA, NV, and TX only).

²To control this weed, apply Barricade 65WG in late summer, fall, or winter before weed seeds germinate.

³Fall Applications for Spring Crabgrass Control in Cool-Season Grasses: In those areas where the ground freezes in the winter, Barricade 65WG can be applied in the fall at rates of 1.0-1.15 lbs./A after the soil temperature falls below 50°F but before the ground freezes. This application will control crabgrass the following spring.

⁴Suppression only.

⁵In any area a single application of 1-2.3 lbs./A of Barricade 65WG will control goosegrass. However, under heavy goosegrass pressure and/or an extended growing season, most effective control may be obtained by making an initial application of 1-1.5 lbs./A followed, after 60-90 days, by a second application that does not exceed the maximum rate for that turfgrass species listed in the Maximum Application Rate Table.

When to Apply Barricade 65WG After Overseeding Turf

Injury to desirable seedlings is likely if Barricade 65WG is applied before the secondary roots of seedlings are in the second inch of soil (not thatch plus soil). To reduce the potential to injure over-seeded turf, wait 60 days after seeding or until after the second mowing, whichever is longer, before applying Barricade 65WG.

Barricade® 65WG

When to Overseed After Application – All States*

Barricade 65WG will inhibit the development of turfgrass species overseeded too soon after application. Follow rates and intervals in the table below for best overseeding/reseeding results.

*Note: In AZ, CA, NV, and TX, the overseeding interval can be shorter in established bermudagrass that has been overseeded with perennial ryegrass. See the next section "*Poa Annua* Control in Established Bermudagrass Overseeded with Perennial Ryegrass (AZ, CA, NV, and TX only)".

Amount of Barricade 65WG Lbs. Product/A	Interval (Months) Before Overseeding		
	North	Transition	South
0.75	4	4	4
1.00	5	4	4
1.15	6	5	5
1.25	—	6	6
1.50	—	7	7
1.75	—	—	9
2.00	—	—	10
2.30	—	—	12

Poa Annua Control in Established Bermudagrass Overseeded with Perennial Ryegrass (AZ, CA, NV, and TX only)

Use on golf courses (excluding golf course putting greens), lawns, and sod nurseries when overseeding with perennial ryegrass (minimum seeding rate of 350 lbs./A).

How Much and When to Apply

Amount to Apply	When to Apply	Expected Control	Use Precautions
0.58-1.0 lb./A	6 to 8 weeks before ryegrass overseeding second application: 4 to 8 weeks after overseeding or when perennial ryegrass roots are in the second inch of soil	1 application for 70% or greater control of <i>Poa annua</i> second application may enhance control	1. Some seedling mortality and temporary reduction in root growth of new seedlings may occur. 2. To reduce the potential for seedling mortality, maintain a moist seedbed with light, frequent irrigation. 3. Make no more than 2 applications per year for this use, and do not exceed a total of 1.3 lbs./A per year. 4. Do not make a second application if any injury to the ryegrass is observed after the first application. 5. Do not make a second application unless the product was first applied before overseeding.

CONTAINER, FIELD GROWN, AND LANDSCAPE ORNAMENTALS (INCLUDING CHRISTMAS TREE FARMS)

Application Timing and Information

Barricade 65WG:

- Will not control emerged weeds.
- May be applied to newly-transplanted and established ornamentals as broadcast or over-the-top spray.
- Is most effective when applied to soil free of clods, weeds, and debris such as leaves and mulch.
- Is most effective when the product is activated in the soil before weed seeds germinate and within 14 days after application.
- Is activated when the treated area receives at least 0.5 inch of irrigation or rainfall, or shallow (1 to 2 inches) mechanical incorporation.

Use Precautions

To reduce injury potential:

- In the spring when buds are rapidly growing and expanding, over-the-top application of Barricade 65WG may temporarily injure new growth of desirable plants. To reduce the possibility of injury at this time, wait to apply Barricade 65WG over the top of newly emerged vegetation until it has hardened off, unless your experience indicates that the ornamental plant will not be injured by the over-the-top application.

Barricade® 65WG

- b. After application, immediately irrigate the treated area to wash Barricade 65WG from plant surfaces onto soil (watering plants before application may improve the washing process).

Ornamentals and Christmas Tree Farms – Application Sites and Instructions

Site	Application Instructions
Newly-Transplanted Container or Field Nursery Stock	<ol style="list-style-type: none"> 1. Delay application until soil has settled around transplants. 2. Water transplants thoroughly before application. 3. Apply after cuttings form roots and are established. 4. To avoid inhibition of the tissue union, apply before budding/grafting or after buds/grafts have taken.
Established Container, Field Nursery Stock, or Landscape Plants	Apply at any time as a broadcast, over-the-top, or directed spray.
Landscape (or Ornamental) Plantings	<ol style="list-style-type: none"> 1. Apply as a broadcast, over-the-top, or as a directed spray. 2. Delay application to newly-transplanted ornamentals until soil has settled around transplants.
Bare Ground Application for Container Placement	<ol style="list-style-type: none"> 1. Apply to soil (including mulch, gravel, wood chips, or other permeable base) upon which containerized ornamentals are placed. 2. After Barricade 65WG is applied, perform shallow cultivation or hand weeding only, to avoid disturbing the herbicide barrier.
In Shadehouses and Uncovered Polyhouses	After Barricade 65WG is applied, uncovered polyhouses must remain open for at least 7 days and ornamentals must receive 2 irrigations totaling at least 1/2 inch of water.
Ornamental Bulbs and Perennial Wildflower Plantings	<ol style="list-style-type: none"> 1. Barricade 65WG may be applied to bulbs or perennial wildflower species listed in the section, Tolerant Ornamental Species. 2. Apply before or after bulbs emerge but before bulbs bloom and weeds emerge. In wildflowers, a postemergence herbicide labeled for wildflowers may be needed to control weeds that have already emerged.

How Much and When to Apply/Ornamentals

Amount to Apply (Broadcast)*	When to Apply	Comments/Instructions
1.0-2.3 lbs./A or 0.37-0.83 oz./ 1,000 sq. ft.	In fall or spring before weeds germinate or after weeds are removed	<ol style="list-style-type: none"> 1. Use the higher rate for longer control. 2. Barricade 65WG may be applied more than once per year as long as the total amount of product applied does not exceed 2.3 lbs./A per year.

***Note:** For band application calculate amount per acre:

$$\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{broadcast rate} = \text{amount to apply per acre of field}$$

Equivalent Measurements for Barricade 65WG

Lbs./A	oz./1,000 sq. ft.	Approximate Equivalent – Tablespoons/1,000 sq. ft.
1.0	0.37	1
1.5	0.55	1.5
2.0	0.74	2
2.3	0.83	2.25

Tank Mixtures For Use On Ornamentals

Barricade 65WG may be tank mixed with other registered herbicides listed on this label to provide a broader spectrum of weed control or to control emerged weeds. Tank mixes with Barricade 65WG are for use only in states where the tank mix partner(s), application site, and intended use pattern are registered.

Follow the label(s) of the tank mix partner(s) for application rates, timing, weeds controlled, tolerant ornamentals, and specific use precautions and/or restrictions. Before mixing pesticides in the spray tank, test compatibility by mixing the products in a small container first. See the **Compatibility Test** section of this label.

Barricade® 65WG

Tank Mix Partners for Barricade 65WG on Ornamentals

Product	Precautions/Instructions
Goal® (use on conifers only)	Mix with Barricade 65WG for postemergence control of certain broadleaf weeds including malva and filaree.
Gallery®, Princep®, Pennant®	See product labels for weed spectrum and tolerant ornamentals.
Roundup® or other glyphosate-based products ¹ , Finale®	<ol style="list-style-type: none"> 1. These nonselective tank mix herbicides control most emerged annual broadleaves and grasses. 2. Take extreme care to prevent tank mixtures with these products from contacting the foliage and stems of turfgrass, trees, shrubs, or other desirable vegetation because desirable vegetation may be severely injured or killed. Apply these tank mixtures as a directed spray and use a shield to prevent spray from contacting foliage of desirable plants. 3. Following instructions on the tank mix partner's label, delay irrigation of the treated area to allow time for the herbicide to be absorbed by weed foliage.

¹Roundup is one brand of a nonselective herbicide containing glyphosate. Other glyphosate products may also be used.

Tolerant Ornamental Species

Barricade 65WG will not harm most trees, shrubs, vines, and flowers. The species listed below in Table 1 are tolerant to Barricade 65WG. Barricade 65WG is approved for application, except in CA, to the species in Table 2. Barricade 65WG may be applied over-the-top of the listed species.

When plants are under stress (such as heat, drought, or frost damage), some cultivars of listed plants may be sensitive to Barricade 65WG.

MycorTree® Injectable

MycorTree® Injectable is a combination inoculant containing mycorrhizal fungi (both Ecto- and VAM) and beneficial rhizosphere bacteria. It is formulated for application using standard soil injection equipment. The mycorrhizal fungi in *MycorTree® Injectable*:

- Increase absorption and transfer of water and mineral nutrients from the soil to the plants
- Help plants mitigate adverse environmental conditions such as drought, soil salinity, and extremes of soil pH.

MycorTree® Injectable also introduces six species of beneficial rhizosphere bacteria which improve soil fertility by:

- Fixing atmospheric nitrogen
- Solubilizing mineral phosphorus
- Biodegrading soil organic matter, releasing mineral nutrients

Finally, MycorTree® Injectable contains a proprietary isoflavone (formononetin) that increases root colonization by native or introduced VAM fungi.

DIRECTIONS FOR USE

ESTABLISHED TREES AND SHRUBS: Mix one "A" packet and one "B" packet in either order per 50 gallons of water to treat 1250 square feet. Agitate the mix thoroughly before application. Spray tanks with good agitation are recommended. Inject the mixed product under cool pressure (150-200 psi maximum) into the upper 8 to 10 inches of the root zone with the use of a soil probe at a rate of 1-quart per injection on 2.5 to 3 foot centers. At a minimum, treat the root zone under the canopy and when possible, beyond the drip line. Avoid hot injection systems, as prolonged heat above 115° F can kill the spores.

In highly compacted soils or confined rooting areas:

Mix two "A" packets and two "B" packets per 50 gallons of water and inject 1 pint on 2.5 to 3 foot centers to treat 2500 square feet, or use granular MycorTree® Vertimulch.

B&B TRANSPLANTS: Mix one "A" packet and one "B" packet per 50 gallons of water, agitate thoroughly, inject into root ball and outside edges under 150-200 psi maximum with a soil probe at a rate of 1 quart per injection. Follow injection chart below:

APPLICATION RATES			
Caliper	Rootball diam.*	Rate per Tree	# Injection Sites
2 inch	24 inch	1.5 gallons	6
3 inch	36 inch	2 gallons	8
4-5 inch	48-50 inch	3 gallons	12
6 inch	60 inch	4 gallons	16
7 inch	70 inch	5 gallons	20
8 inch	80 inch	6 gallons	24

* B & B Root ball diameters are based on tree size according to American Nursery
Not recommended for use as a soil drench.

Mixed solution should be used within a 12 hour period.

PHC BioPak®

PHC BioPak® enriches the soil profile with beneficial microbes which act as a sustainable fertility "system." Once the microbes are in place in the root zone, they solubilize phosphorus, fix atmospheric nitrogen and can gradually improve soil tilth, processes that encourage healthy root growth. **PHC BioPak®:**

- Increases organic content of the soil
- Increases the natural bioactivity in sterile or depleted soils
- Improves fertility in the root zone

DIRECTIONS FOR USE

Add PHC BioPak® to the spray or injection tank. PHC BioPak® has a near-neutral pH of 6.0. As a result, PHC BioPak® can be tank mixed with most diluted pesticides and NPK fertilizers. Add PHC BioPak® to the tank last, after all other products have been diluted.

PHC BioPak® can be applied to soil by spray, drench, fertigation, or soil injection techniques. If applied to soil surface, follow with water to wash the product down into the root zone.

Hose-End Sprayer: Add 1 cup of PHC BioPak® into cartridge and spray over 10,000 square feet of lawn or 5000 square feet of flower bed. Follow with water to wash product into the root zone. Mixed solution should be used within a 12 hour period.

APPLICATION RATES

TREE/SHRUB CARE RATES

Application	PHC BioPak	Water Volume	Coverage	Frequency
Installation	1 pounds	50 to 100 gallons	1250 square feet	At planting
Maintenance	1/2 pounds	50 to 100 gallons	1250 square feet	Monthly
Stress Recovery	1 pounds	50 to 100 gallons	1250 square feet	As needed

TURF CARE RATES

Application	PHC BioPak	Water Volume	Coverage	Frequency
Greens and Tees	1 pound	50 to 100 gallons	1 acre	Monthly
Fairways and Lawns	1 pound	50 to 100 gallons	1 acre	As needed
New Seeding or Overseeding	2 pounds	50 to 100 gallons	1 acre	Every 2 to 4 weeks after germination
Sod Installation	2 pounds	50 to 100 gallons	1 acre	1 to 2 weeks prior to harvest or immediately after installation

ORNAMENTAL PLANTS/POTTED PLANTS

Application	PHC BioPak	Water Volume	Coverage	Frequency
Flower Beds	1/4 pound	5 to 15 gallons	5000 sq ft	Every 2 to 4 weeks
Potted Plants	2 teaspoons	1 gallon	Apply 1/4 of pot volume	Every 2 to 4 weeks

IN-LINE SYSTEMS

Fertigation	PHC BioPak	Mix Tank	Dilution Setting	Frequency
Dosatron	5 pounds	5 gallons	1:100	Every 2 to 4 weeks

After application, rinse water through system,

RENEWABLE, SUSTAINABLE FERTILITY

BOLSTER

From Sustane® Plant Growth Supplement

Description:

BOLSTER is a concentrated plant growth supplement specifically developed to prepare plants for improved growth in sub-optimum and stress conditions. BOLSTER is a scientifically balanced formulation of cold processed seaweed extracts, humic acid and plant nutrients, which provide optimum growth potential. Seaweed extract from *Ascophyllum nodosum* is an excellent source of auxin, cytokinin and gibberellin hormones and trace minerals. These hormones are combined with humic extracts from Leonardite and a specially chelated iron that is readily available.

BOLSTER's performance is proven in over four years of field research and university testing.

BOLSTER is an important segment of integrated turf management and resource conservation.

Causes of Sub-optimum and Stress Conditions:

- Drought Conditions
- Adverse Temperatures
- Chilling Frost
- Parasitic Nematodes
- Saline Soils
- Poor Root Development
- High Salt Index of
- Irrigation Water
- Traffic/Wear
- Low Cutting Height
- Disease

Benefits of BOLSTER used in an Integrated Turf Management Program:

- Prepares plants for stress conditions
- Increases root mass and depth without a flush of topgrowth
- Improves drought resistance
 - ⇒ Increases the plant's water absorption and retention
 - ⇒ Reduces the plant's wilting potential
- Increases chlorophyll production and delay leaf senescence
- Increases salt tolerance to saline soils and irrigation water high in salts
- Improves cold tolerance and may extend the growing season of warm season grasses parasitic nematodes
- Improves plant color with specially chelated iron
- Enhance seedling establishment of new turf and overseeded sites
- Faster plant recovery from stress

Guaranteed Product Analysis:

Sulfur (S) (combined).....2%

Iron (Fe).....5%

Non plant food Ingredients:

Solubilized seaweed (*Ascophyllum nodosum*).....2%

Humic acids from Leonardite.....4%

Application:

Note: All rates given are concentrate levels, prior to dilution with water.

- Always shake well before using
- Dilute with water at rate of 30 : 1
- For Greens and Tees - apply 1.5-3 oz./1000 sq. ft. and repeat every 2-4 weeks as needed
- For Fairways, Sportsfields & Lawns - apply 1 gallon per acre, 3 oz. per 1000 sq. ft., 3 times per year at 8-10 week intervals
- For Hydroseeding - with mixture at 1 gallon per acre
- For Overseeding - apply 1 gallon per acre, 3 oz. per 1000 sq. ft., after seeding
- For New Seedlings - apply 1 gallon per acre, 3 oz. per 1000 sq. ft., 3 times per year at 8-10 week intervals
- For Sod Installation - apply 1 gallon per acre, 3 oz. per 1000 sq. ft., 2 weeks prior to and after sod installation
- Deep Root Feed for Trees - Do NOT foliar apply. Apply in holes 4"-24" deep in a 2' x 2' grid pattern within dripline, at a rate of 2 oz. per one inch diameter at breast height of tree
- Soil Drench for Trees - apply 3 gallon per acre annually
- Root Dip - place roots in dilution for 2 minutes

THIS PRODUCT IS INTENDED AS A SUPPLEMENT TO A REGULAR FERTILIZER PROGRAM AND WILL NOT BY ITSELF SUPPLY ALL THE NUTRIENTS NORMALLY REQUIRED BY PLANTS.

Compatibility: Can be tank mixed with most fertilizers although the standard jar test should be run prior to mixing.

APPLICATION DIRECTIONS - Control of Crabgrass

Pre-emergence and Early Post-emergence Control

This product provides "pre-emergence" control of crabgrass (including the large, smooth, and southern species) when applied prior to the emergence of crabgrass from the ground in established lawns and ornamental turfs. It can also provide "early post-emergence" control of crabgrass during the early stages of crabgrass growth after the crabgrass has emerged from the ground. However, it is often difficult to see the very small, early stages of crabgrass in well-established lawns and ornamental turfs. Post-emergence crabgrass control will be obtained only when this product is applied prior to the tillering of crabgrass, which generally corresponds to the time when you can first easily see the crabgrass plants in the lawn or turf. So the practical benefit of this product's additional, early post-emergence activity is that (compared to strictly pre-emergence crabgrass products), Dimension controls crabgrass prior to and up to 4 weeks after germination.

Application Frequency and Timing

This product may be applied as a single application, as a split application, or as a sequential application for crabgrass control in the spring, summer, or fall. DO NOT apply more than 11.47 lb of this product per 1,000 sq ft per application, and no more than 34.41 lb of this product per 1,000 sq ft per year.

Spring Applications

For single applications made in the spring or early summer, this product should be applied at the appropriate rate corresponding to one of the three control programs listed in Table 1 below, depending on the user's location, the turfgrass mowing height, and whether the use is considered to be pre-emergence or early post-emergence at the time of the application. The duration of residual weed control provided by this product is directly related to the total rate applied, but will vary somewhat depending on weather, weed pressure, turfgrass competitiveness, and the user's location within a region.

Use Program #1 for pre-emergence control at sites where the turfgrass is cut high (e.g., homeowner lawns). This program provides 3-5 months of pre-emergence crabgrass control. This program should not be used for early post-emergence crabgrass control.

Use Program #2 for pre-emergence control at sites where (a) turfgrass is cut low (e.g., golf fairways), and (b) turfgrass maintenance or weed control has not been conducted during the previous year. This program provides 4-6 months of pre-emergence crabgrass control. This program may also be used for early post-emergence control at sites where turfgrass is cut high (e.g., homeowner lawns).

Use Program #3 for pre-emergence control at sites where (a) turfgrass is cut low (e.g., golf fairways) and (b) turf maintenance or weed control has not been conducted during the previous year. This program provides 4-6 months of pre-emergence crabgrass control. This program may also be used for early post-emergence control at sites where turfgrass is cut low (e.g., golf fairways).

Subsequent, sequential pre- and/or post-emergence applications should be made where longer periods of control are desired.

Where split fertilizer applications are recommended, the rates in Table 1 may be split across two applications made 6-10 weeks apart and prior to crabgrass emergence.

Table 1: Recommended Single Application Use Rates*

PROGRAM	#1	#2	#3
USE (turfgrass cut)	Pre-emergence (high-cut turf)	Pre-emergence (low-cut turf) Post-emergence (high-cut turf)	Pre-emergence (low-cut turf) Post-emergence (low-cut turf)
REGION			
North	2.86 lb/1,000 sq ft	4.13 lb/1,000 sq ft	5.73 lb/1,000 sq ft
Transition	4.13 lb/1,000 sq ft	5.73 lb/1,000 sq ft	8.49 lb/1,000 sq ft
South	5.73 lb/1,000 sq ft	8.49 lb/1,000 sq ft	11.47 lb/1,000 sq ft
Coastal South	8.49 lb/1,000 sq ft	11.47 lb/1,000 sq ft	11.47 lb/1,000 sq ft**

Note: 5.73 lb per 1,000 sq ft is equal to 0.25 lb active ingredient per acre.

* Particle distribution at this rate may not provide adequate control or suppression. ** DO NOT apply more than 11.47 lb of this product per 1,000 sq ft per application, and no more than 34.41 lb of this product per 1,000 sq ft per year. Post-emergence control is limited; see "Crabgrass Control" and "Precautions" sections above. Regions include areas listed below. See map of the United States.

North: all areas not designated below.
Transition: DE, KS, KY, MD, MO, NJ, VA, southeastern PA, southern areas of IL, IN, OH, & coastal areas of CT, NY, & RI.
South: AL, AR, AZ, CA, GA, LA, MS, NC, NM, NV, OK, SC, TN, & TX.
Coastal South: HI, FL, & southern coastal areas of AL, GA, LA, MS, NC, SC, & TX.

** May require split or sequential applications for full control.

Fall Applications

This product can also be applied in the late summer or early fall (late August through November) at the "Program 3" use rates listed in Table 1 to provide control of crabgrass through the early part of the next spring. The fall application should be followed by an appropriate spring application to provide season-long control.

Tips for Improved Control

For best results, apply this product within a few days after mowing and delay mowing again for a few days after the application. When treated lawn or

ornamental turf areas are watered or receive significant rainfall within a few days after application of this product, improved weed control may result. Use of split (half-rate) applications spaced 6-8 weeks apart may provide improved weed control.

APPLICATION DIRECTIONS - Control of Other Grasses and Broadleaf Weeds

Spring Application

Used as directed for crabgrass control in the spring, this product will also control (at the "Program 3" rates) the following weeds when applied prior to their emergence:

barleygrass	ryegrass (annual & perennial)
bluegrass (annual)	smutgrass
crowfootgrass	lespedeza (common)
foxtail (yellow & green)*	oxalis (buttercup, creeping & yellow woodsorrel)
goosegrass	purslane (common)
kikuyugrass	speedwell (corn)
	spurge (prostrate & spotted)

*Also controlled at the "Program 2" rates.

Fall Applications

Used as directed for late summer or early fall use, for crabgrass control through the early part of the next spring, this product will also control (at the "Program 3" rates) the following weeds when applied prior to their emergence:

bluegrass (annual)	geranium (Carolina)
bittercrisp	parsley-plant
chickweed	pineappleweed
henbit	shepherd's purse

SUGGESTED SPREADER SETTINGS*

Spreader	2.86 lb	4.13 lb	5.73 lb	8.49 lb	11.47 lb
LESCO Calibration Gauge	#12	#14	#15	#18	—
SCOTTS® R8A	I	J	J ½	L	—
Cyclone® or Spyker®	3 ½	4	4 ½	4 ¾	—
LESCO Pendulum	16	20	28	34	—

*IMPORTANT: These settings are only approximate. Age, condition of spreader, and operator speed can cause wide variation. Be sure to calibrate your spreader with each application.

APPLICATION EQUIPMENT AND INSTRUCTIONS

Apply this product with drop or rotary spreaders designed to apply granular herbicides. Avoid the use of spreaders that would apply this product in narrow rows or concentrated bands. Before each application, calibrate the spreader according to the equipment manufacturer's directions for adjusting the spreader settings such that the spreader delivers the appropriate application rate recommended above. Apply this product uniformly over the lawn or ornamental turf area. A more uniform application can be made by spreading half of the required amount over the area and then applying the remaining half at a right angle to the previous direction. Avoid streaking, skips, or overlaps during application. Check equipment frequently to ensure equipment is functioning properly and applying uniform distribution of granules.

STORAGE AND DISPOSAL

STORAGE: Store this product only in its original container in a dry, cool, secured storage area. Do not contaminate water, foodstuffs, feed or seed by storage or disposal.

PRODUCT DISPOSAL: Wastes resulting from the use of this product that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, State or local procedures. Or call or [1-800-CLEANUP] for disposal instructions. Never place unused product down any indoor or outdoor drain.

EMPTY CONTAINER DISPOSAL: Do not reuse bag. Dispose of emptied bag(s) in a sanitary landfill approved for pesticide disposal, or by incineration.

SPILL: In case of spill, sweep up material and dispose of material according to "product disposal" directions listed above.

WARRANTY

LESCO, Inc. warrants that this product conforms to its chemical description and is reasonably fit for the purpose stated on the label only when used in accordance with label directions under normal conditions of use. LESCO MAKES NO OTHER EXPRESS OR IMPLIED WARRANTIES EITHER OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Handling, storage and use of the product by Buyer or User are beyond the control of LESCO and Seller. Risks such as crop injury, ineffectiveness or other unintended consequences resulting from, but not limited to, weather or soil conditions, presence of other materials, disease, pest, drift to other crops or property or failure to follow label directions will be assumed by the Buyer or User. IN NO CASE WILL LESCO OR SELLER BE HELD LIABLE FOR CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE HANDLING, STORAGE, OR USE OF THIS PRODUCT.

Information concerning the raw materials composing this product can be obtained by writing to: LESCO, Inc., Attn: RA Dept., 1301 East 9th Street, Suite 1300, Cleveland, Ohio 44114-1849, referring to the Item number found on this bag.

FIRST AID

If swallowed	<ul style="list-style-type: none">• Call a poison control center or doctor immediately for treatment advice.• Have person sip a glass of water if able to swallow.• Do not induce vomiting unless told to by the poison control center or doctor.• Do not give anything by mouth to an unconscious person.
If in eyes	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15-20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.• Call a poison control center or doctor for treatment advice.
If on skin or clothing	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15-20 minutes.• Call a poison control center or doctor for treatment advice.
If inhaled	<ul style="list-style-type: none">• Move person to fresh air.• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.• Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact Chem-Trec at 1-800-424-9300 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION! CAUSES EYE IRRITATION. HARMFUL IF INHALED. Avoid contact with eyes or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse. Prolonged or frequently repeated skin contact while handling this material may cause allergic reaction in some individuals.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and highly toxic to other aquatic organisms including oysters and shrimp. Use with care when applying to turf areas adjacent to any body of water. Drift and runoff from treated turf may adversely affect aquatic organisms in adjacent aquatic sites. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

GENERAL INFORMATION

This product is a herbicide that provides control of crabgrass, other annual grasses, and broadleaf weeds in established lawns and ornamental turfs, including golf course fairways, roughs, and tee boxes. This product will not harm nearby established ornamentals when used according to label directions.

This product may be used on seeded, sodded, or sprigged lawns and ornamental turfs that are well-established. The grass must have developed a good root system and a uniform stand, and have received at least two mowings following its seeding, sodding, or sprigging before it can receive its first application of this product. Use of this product on lawns and ornamental turfs that are not well-established, or on those that have been weakened by weather-, pest-, disease-, chemical-, or mechanical-related stress, may increase the chances for turf injury. This product should only be applied to lawns and ornamental turfs that are composed of the following turfgrass species that have been determined to be tolerant to applications of this product. When applied as directed under these use directions, the following established turfgrasses are tolerant to this product:

Cool-Season Grasses

Common Name	Scientific Name
Bentgrass, creeping*	<i>Agrostis palustris</i>
Bluegrass, Kentucky	<i>Poa pratensis</i>
Fescue, fine**	<i>Festuca rubra</i>
Fescue, tall	<i>Festuca arundinacea</i>
Ryegrass, perennial	<i>Lolium perenne</i>

Warm-Season Grasses

Common Name	Scientific Name
Bahiagrass	<i>Paspalum notatum</i>
Bermudagrass	<i>Cynodon dactylon</i>
Buffalograss***	<i>Buchloe dactyloides</i>
Carpetgrass	<i>Axonopus affinis</i>
Centipedegrass	<i>Eremochloa ophiuroides</i>
Kikuyugrass	<i>Pennisetum clandestinum</i>
St. Augustinegrass	<i>Stenotaphrum secundatum</i>
Zoysiagrass	<i>Zoysia japonica</i>

DO NOT apply this product to Colonial Bentgrass (*Agrostis tenuis*) varieties.

*Use of this product on certain varieties of Creeping Bentgrass, such as 'Cohansey', 'Carmen', 'Seaside', and 'Washington' may result in undesirable turfgrass injury. Not all varieties of Creeping Bentgrass have been tested.

**Use of this product on certain varieties of Fine Fescue may result in undesirable turf injury. The following Fine Fescue varieties have been found to be sensitive to this product: 'Atlanta', 'Banner', 'Beauty', 'Bijart', 'CF-2', 'Enjoy', 'HF-93', 'Highlight', 'Ivalo', 'Jamestown', 'Kokel', 'Majenta', 'Mary', 'Pennlawn', 'Tamara', 'Tajana', 'Waldorf', and 'Waldine'. Not all varieties of Fine Fescue have been tested.

***DO NOT use this product on seedling Buffalograss in the spring of the first year of establishment until the turfgrass is fully green and has established new roots.

DIMENSION* TURFGRASS REGIONS

Reseeding, Overseeding, or Sprigging

Reseeding, overseeding or sprigging of treated areas with this product should be delayed until 12 weeks from the time of application. Reseeding, overseeding or sprigging before 12 weeks after application may prevent establishment of desirable turfgrasses. When reseeded or overseeding, proper cultural practice such as soil cultivation, irrigation and fertilization should be followed.

However, if overseeding with perennial ryegrass in the fall, overseed 8 weeks or later after a single application.

For best results, use mechanical or power seeding equipment (slit seeders) designed to give good seed to soil contact.

USE PRECAUTIONS

- Not for use on Golf Course Putting Greens.
- The early post-emergence crabgrass control described below is limited. Post-emergence applications are only effective on crabgrass if applied before crabgrass has displayed its fifth leaf or first tiller. For best results, cultural practices that disturb the soil, such as core-, spike-, or hydro-aeration, and verticutting, should be done before application of this product. DO NOT apply this product until the grass has recovered from these cultural practices.
- Apply this product directly to established lawns or ornamental turfs only.
- DO NOT apply to flowers, vegetables, shrubs, or trees.
- DO NOT use clippings from treated turf for mulching around vegetables or fruit trees.
- DO NOT apply this product to pastures. Keep people and pets off treated areas until dust has settled.

Precautionary Statements

Keep Out of Reach of Children

Hazards to Humans and Domestic Animals

CAUTION

Harmful if swallowed. Harmful if absorbed through skin. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling. Harmful if inhaled. Avoid breathing vapor or spray mist. Remove contaminated clothing and wash clothing before reuse. Causes moderate eye irritation. Avoid contact with eyes or clothing.

Refer to inside of label booklet for additional precautionary information and Directions for Use.

Notice: Read the entire label before using. Use only according to label directions. **Before buying or using this product, read "Condition of Sales and Warranty" inside label booklet.**

Personal Protective Equipment

When handling FlightControl[®] PLUS use long-sleeved shirt and long pants, socks, shoes and chemical resistant gloves.

FIRST AID

If swallowed

- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If on skin or clothing

- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes

- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If inhaled

- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of emergency endangering health or the environment involving this product, call **INFOTRAC at 1-800-535-5053.**

Environmental Hazards

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA. Do not contaminate water by cleaning of equipment or disposal of waste. Apply this product only as specified on this label.

FlightControl[®] PLUS For Geese Repellency

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

USE RESTRICTIONS: This product may be used to repel geese, including Canada geese.

For Professional Application to Lawns.

- Repels geese from terrestrial areas at or near airports.
- Repels geese from grassy areas at commercial sites, industrial sites, municipal sites or in developed urban areas.
- Repels geese from golf courses, ornamental nurseries and conifer nurseries.

FOR THE STATE OF NEW YORK USE THE FOLLOWING DIRECTIONS:

For professional application to repel geese at the following sites only:

- Terrestrial areas at or near airports.
- Grassy areas at commercial sites and industrial sites.
- Golf courses.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage, disposal or cleaning of equipment.

Pesticide Storage: Do not allow containers to freeze. After prolonged storage, product may separate. If this occurs, resuspend with agitation.

Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance. SePRO Corporation also can be contacted for guidance on the disposal of pesticide wastes.

Container Disposal: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or incinerator or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**CONSULT FEDERAL, STATE OR LOCAL
DISPOSAL AUTHORITIES FOR
APPROVED ALTERNATIVE PROCEDURES**

General Information

To prevent contamination of the dilute solution of FlightControl® PLUS by other chemical residues, be sure that the equipment is thoroughly clean before use or use dedicated equipment.

Apply product using properly calibrated and maintained spray equipment. Do not apply when surface to be treated is wet or when rain is expected. **For best results, allow product to dry on turf grass surface prior to rainfall.** Mowing treated areas will remove product and reduce product effectiveness.

For application by professional applicators only. Do not apply this product in a way that will contact workers or other persons, either directly or through drift.

MIXING DIRECTIONS: Thoroughly shake or stir FlightControl® PLUS prior to diluting with water.

APPLICATION DIRECTIONS:

When geese have begun to flock in one area and are problematic, apply FlightControl® PLUS according to the following rates to the grassy, turf, or forage areas where geese are expected to feed/roost. To determine if the geese are problematic, conduct a visual inspection (bird count) by responsible officials/parties before application.

Grassy or Turf Areas:

- In most cases, dilute 2 quarts of FlightControl® PLUS with 50 gallons of water and apply per acre of grass, turf or land surface (1.5 oz. FlightControl® PLUS per 1,000 sq. feet). You might need to use as much as one gallon diluted in 50 gallons of water per acre for extreme bird pressure. Your supplier will provide individualized assistance on concentrations to be used under existing conditions.
- Mix with water based on spray equipment specifications and recommendations.
- Apply using a fine spray pattern to evenly distribute over entire surface to be treated.
- Allow material to dry before permitting human activity in the treated area.
- Spray at weekly intervals or as required by geese activity and anticipated seasonal migrations.
- When applying to turf, cutting of the lawn will reduce amount of repellent available.

Condition of Sales and Warranty

SePRO Corporation warrants that the product conforms to its chemical description and is reasonably fit for the purpose stated on the label only when used in accordance with label directions under normal conditions of use. Since timing, method of application, weather and ground conditions, mixture with other chemicals, and other factors affecting the use of this product are beyond our control, no warranty is given concerning the use of this product contrary to label directions, or under conditions which are abnormal or not reasonably foreseeable. SEPRO CORPORATION MAKES NO OTHER WARRANTIES EITHER EXPRESS OR IMPLIED WARRANTIES INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Handling, storage and use of the product by Buyer or User are beyond the control of SePRO Corporation and Seller. Risks such as ineffectiveness or other directions will be assumed by the Buyer or User. IN NO CASE WILL SEPRO CORPORATION OR SELLER BE HELD LIABLE FOR CONSEQUENTIAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE HANDLING, STORAGE OR USE OF THIS PRODUCT, NOR HELD RESPONSIBLE FOR INJURY OR LOSS AS A RESULT OF THE HANDLING OR USE OF THIS PRODUCT.

The terms of the Condition of Sales and Warranty cannot be varied by any written or verbal statements or agreements. No employee or sales agent of SePRO Corporation or the seller is authorized to vary or exceed the terms of the Condition of Sales and Warranty in any manner.

AZATIN[®] XL

OLYMPIC
HORTICULTURAL PRODUCTS™

FOR INDOOR AND OUTDOOR USE ON
ORNAMENTALS AND HORTICULTURAL CROPS

ACTIVE INGREDIENT:

Azadirachtin* 3.0%

OTHER INGREDIENTS 97.0%

100.0%

*Contains 0.265 pounds (120 grams) of azadirachtin per gallon

EPA Reg. No. 70051-27-59807

EPA Est. No.: 44616-MO-1

Net Contents: One Quart

KEEP OUT OF REACH OF CHILDREN

CAUTION

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed or inhaled. Avoid breathing vapors or spraymist. Causes eye irritation. Do not get in eyes. Avoid contact with skin or clothing. Wash thoroughly with soap and water after handling.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- long-sleeved shirt and long pants
- chemical resistant gloves such as barrier laminate or Viton (14 mil)
- shoes plus socks, and
- protective eye wear.

Follow manufacturer's instructions for cleaning / maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

FIRST AID

If in Eyes: Flush eyes with plenty of water. Call a physician if irritation persists.

If Inhaled: Move to fresh air. Clear lungs and airways. Get medical attention if irritation develops.

If on Skin: Wash with plenty of soap and water. Get medical attention if irritation develops.

If Swallowed: Do not induce vomiting. Contact a physician immediately.

User Safety Recommendations:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal area below the mean highwater mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow workers entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

Long-sleeved shirt and long pants, chemical resistant gloves such as barrier laminate or Viton (14 mil), shoes plus socks, and protective eye wear.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standards for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, or greenhouses. For other uses including golf courses, and other non-agricultural uses, do not enter treated areas without protective clothing until sprays have dried.

Pests controlled by AZATIN® XL

Aphids, such as:

Apple Aphid
Cotton Aphid
Green Peach Aphid
Melon Aphid
Pea Aphid
Potato Aphid
Rose Aphid

Tomato Fruitworm

Tomato Pinworm

Chafers, such as:

European Chafer
Northern Masked Chafer
Rose Chafer
Southern Masked Chafer

Armyworms, such as:

Beet Armyworm
Fall Armyworm
Lawn Armyworm
Southern Armyworm
Yellow Striped Armyworm

Cutworms, such as:

Black Cutworm
Citrus Cutworm

Bagworms

Beetles, Grubs and

Weevils, such as:

Black Vine Weevil
Colorado Potato Beetle
Elm Leaf Beetle
Flea Beetle
Japanese Beetle
June Beetle
Mexican Bean Beetle
Rose Chafer

Flies, such as:

Caribbean Fruit Fly
Crane Fly
Fungus Gnat
Hessian Fly
Oriental Fruit Fly
Mediterranean Fruit Fly
Melon Fly
Shore Fly
Walnut Husk Fly

Leaf Tiers

Leafhoppers, such as:

Grape Leafhopper
Potato Leafhopper
Variegated Leafhopper

Leafminers, such as:

Citrus Leafminer
Serpentine Leafminer
Vegetable Leafminer

Leafrollers, such as:

Blueberry Leafroller
Filbert Leafroller
Fruitree Leafroller
Grape Leafroller
Oblique Banded Leafroller
Omnivorous Leafroller

Leaf Perforators

Marsh Crane Flies

Mealybugs

Moths, such as:

European Pine Shoot Moth
Pine Tip Moth
Tussock Moth

Psyllids

Sawflies

Thrips, such as:

Citrus Thrips
Flower Thrips
Gladiolus Thrips
Western Flower Thrips

Whiteflies, such as:

Greenhouse Whitefly
Silverleaf Whitefly
Sweetpotato Whitefly

CROPS ON WHICH AZATIN® XL CAN BE USED

Azatin® XL can be used indoors and outdoors. Plants may be potted, grown in the soil or soil-less mixtures or grown hydroponically.

Bedding Plants, Flowers, Potted Plants and Foliage, such as:

Actinopterus
Aglaonema
Allamanda
Algerian Ivy

Tamarillo

Tea
Tobacco
Waterchestnut
Watercress

Important note: This product has been evaluated for phytotoxicity on a wide range of crops. However, since all combinations or sequences of pesticide sprays including fertilizers, surfactants and adjuvants have not been tested, it is recommended that a small area be sprayed first to make certain that no phytotoxicity occurs.

PREHARVEST INTERVAL

There are no restrictions on applying this product up to the time of harvest. Individual state regulations may vary and should be consulted for allowable pre-harvest interval.

MODE OF ACTION

This product controls targeted insect larvae when they ingest or come in contact with it, but interfering with the insect's ability to molt. It is effective on all larval stages and pupae. It also reduces crop damage by repelling and deterring feeding of all stages of insects.

GENERAL APPLICATION DIRECTIONS

READ ALL DIRECTIONS BEFORE USING.

Dilute **Azatin® XL** in water at a rate up to 21 fluid ounces (20 grams active ingredient) per acre. Apply using any suitable ground or aerial equipment, in a manner to obtain uniform and complete plant coverage.

For crops apply using conventional application equipment in a minimum of 30 gallons of water per acre and aerial application equipment in a minimum of 3 gallons of water per acre.

Avoid over-spraying to the point of excessive runoff.

Refer to tables for detailed dilution rates.

Application Rates for Whitefly and Other Greenhouse (including Lathe and Shade), Nursery and Interiorscape Pests Apply Azatin® XL at the recommended use dilution rate in 100 gallons of water to assure adequate plant coverage (usually 1-2 gallons of spray solution / 1,000 sq. feet).		
Pests controlled by Azatin® XL	Rate of Azatin® XL per 100 gallons water	Remarks
Aphids	12 to 16 oz.	Suppression and adult feeding deterrence.
Armyworms	10 to 16 oz.	Foliar application to larvae.
Black Vine Weevil	21 oz. / acre	Soil and foliar application to larvae.
Fungus Gnats	8 oz.	Apply as soil drench for maggot control.
Leafminers	10 to 16 oz.	Foliar application to larvae.
Western Flower Thrips	12 to 16 oz.	Suppression of larvae and adult feeding deterrence.
Sweetpotato Whitefly (including strain B)	10 to 16 oz.	Foliar application to larvae and nymphs.
Greenhouse Whitefly	10 to 16 oz.	Foliar application to larvae and nymphs.
Others Bagworms Cankerworms Cutworms Leafhoppers Leafrollers Sawflies Tent Caterpillars	10 to 16 oz.	Foliar application to nymphs / larvae.

Azatin Application Rates for Key Insect Pests in Vegetables, Fruits, and Nut Crops Apply Azatin® XL at the recommended use dilution rates in sufficient water to assure adequate coverage. (Conventional application equipment apply in a minimum of 30 gallons water per acre). (Aerial application equipment apply in a minimum of 3 gallons water per acre).		
Pests controlled by Azatin® XL	Rate Azatin® XL per acre	Remarks
Aphids, such as: Cotton Aphid Green Peach Aphid Hop Aphid Potato Aphid	10 to 16 oz.	Foliar application, for suppression only
Armyworms, such as: Beet Armyworm Fall Armyworm Southern Armyworm Yellow Striped Armyworm	5 to 16 oz.	Foliar application to larvae
Beetles, such as: Colorado Potato Beetle	5 to 16 oz.	Foliar application to larvae
Caterpillars, such as: Corn Earworm Diamondback Moth Imported Cabbageworm Navel Orangeworm Tobacco Budworm Tobacco Hornworm Tomato Fruitworm Western Grapeleaf Skeletonizer	10 to 21 oz. 10 to 16 oz. 5 to 16 oz. 10 to 21 oz. 5 to 16 oz. 5 to 16 oz. 5 to 16 oz. 5 to 16 oz.	Foliar application to larvae
Cutworms, such as: Citrus Cutworm Black Cutworm	5 to 16 oz. 5 to 10 oz.	Foliar application to larvae
Loopers, such as: Cabbage Looper Soybean Looper	5 to 10 oz.	Foliar application to larvae
Leafminers, such as: Citrus Leafminer Serpentine Leafminer Vegetable Leafminer	10 to 16 oz.	Foliar application to larvae. Use with oil.
Leafhoppers, such as: Grape Leafhopper Variegated Leafhopper	10 to 16 oz.	Foliar application to nymphs. Use equipment to target the underside of leaves.
Whiteflies, such as: Greenhouse Whitefly Silverleaf Whitefly Sweetpotato Whitefly	10 to 21 oz.	Foliar application to nymphs. Use equipment to target undersides of leaves.
*When using lower rates (less than 10 oz.), combine AZATIN® XL with an approved adjuvant such as a non-phytotoxic crop oil, up to 1%. Always ensure good coverage by adjusting spray gallonage. Treat early for best control. Do NOT use less than 10 oz. in California.		

Applications should be made when pests first appear and are in their early larval stages. Repeat applications every 7 days or as needed.

For best results, a spreader-sticker should be added at the recommended label rate.

Dilute solutions containing **Azatin® XL** should be maintained at a pH between 3 and 7, and applied soon after preparation. Do not store for later use.

This product may be pre-mixed in a supply tank with water, fertilizer or other appropriate agricultural chemicals. Agitation is necessary (See Mixing Directions). Crop injury or lack of effectiveness can result if uniform distribution is not achieved.

When pest populations are high, use the higher label rates.

SPRAY:

High volume - When plant foliage is dense, use the higher label **Azatin® XL** rates and increase spray gallonage to obtain uniform and complete coverage.

Aerial / low / ultra low volume - Apply **Azatin® XL** at rates of 5 to 21 oz. / acre (10-21 oz. in California) in a minimum of 3 gallons of water per acre. For best results, ensure uniform and complete plant coverage.

DRENCH / CHEMIGATION:

This product is effective as a soil drench for controlling soil-borne insect larvae (e.g. Fungus Gnats).

It is also effective as a soil drench for controlling foliar and soil-borne pests, particularly when alternated with **Azatin® XL** foliar sprays. Apply **Azatin® XL** in sufficient water and for sufficient duration so as to distribute the recommended rate evenly to the entire treated area.

Apply to moderately moist soils. Use volumes that thoroughly wet the soil, but do not cause significant surface runoff or excessive drip from pots.

CHEMIGATION:

Refer to supplemental labeling entitled "Olympic's Chemigation Bulletin" for use directions for chemigation. Do not apply this product through any irrigation system unless the supplemental labeling on chemigation is followed.

SPRAY EQUIPMENT

Use suitable equipment that allows for uniform coverage of the targeted treatment area, such as hand or power operated spray equipment.

MIXING DIRECTIONS

Azatin® XL WITH WATER:

For best results,

1. Use clean equipment.
2. Fill tank 1/2 full to 3/4 full with water and begin agitation.
3. Add pesticide to the tank.
4. Fill the tank completely with water and mix thoroughly before applying.
5. Adjust spray solution to between 3 to 7 pH, if necessary.
6. Pesticide mix should be applied immediately after mixing.
7. If the mixture is not applied immediately, agitate before application.
8. Thoroughly clean equipment following application.

TANK MIXTURES OR FLUID FERTILIZERS:

1. Before using this product in a tank mix with fertilizer or registered pesticide, determine compatibility by conducting a compatibility test with a small amount of each product.
2. Observe all cautions and limitations on labels of all products used in combination.
3. Follow all tank mix directions and observe limitations listed in the combination product(s) label.

COMPATIBILITY TEST

A compatibility test should be performed before tank mixing this product with other product(s) or liquid fertilizer(s). Fill three separate 1 quart jars with 1 pint of water of fertilizer. To a first jar add this product and mix well. To a second jar, add the desired other tank mix product(s) and mix well. To a third jar, combine this product with the other tank mix product(s) and mix well. If more than one product is used, add them separately with dry formulations first, flowables next, and emulsifiable concentrates last.

After each addition, shake or stir gently to thoroughly mix. For the appropriate amount of product for this test use the following:

DRY PRODUCTS - For each pound to be applied per acre, add 1.5 level teaspoons to each jar.

LIQUID PRODUCTS - For each pint to be applied per acre, add 0.5 teaspoons or 2.5 ml to each jar.

Note any differences between the mixtures in the jars (compounds alone vs mixtures) after 15 minutes. Look for evidence of physical incompatibility such as clumping, precipitation, oily residues on the sides of the glass or other signs of incompatibility. If either mixture separates, but can be readily re-mixed, the mixture can be sprayed as long as good agitation is used. If the mixtures are incompatible, do not use the mixture.

STORAGE AND DISPOSAL

GENERAL: Do not contaminate water, food or feed by storage and disposal.

PESTICIDE STORAGE: Do not store above 100 degrees F or below -20 degrees F for extended periods of time. Keep containers tightly closed when not in use.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Do not reuse as a container. Triple rinse or equivalent. Then offer for recycling or reconditioning, or puncture and dispose of in an incinerator or landfill or by other procedures approved by State and local authorities.

WARRANTY

Olympic Horticultural Products Company warrants that the material contained herein conforms to the description on the label and is reasonably fit for the purposes referred to in the directions for use. Timing and method of application, weather, watering practices, nature of soil, the insect problem, condition of the crop, incompatibility with other chemicals not specifically recommended, and other influencing factors in the use of this product are beyond the control of the seller. Buyer assumes all risks of use, storage or handling of this material not in strict accordance with directions given herein. **NO OTHER EXPRESS OR IMPLIED WARRANTY OF THE FITNESS OR MERCHANTABILITY IS MADE.**

Neem Oil

Neem oil is a broad spectrum botanical insecticide, miticide and fungicide treatment derived from the seeds of the neem tree (*Azadirachta indica*). Neem trees are native to South East Asia, and is grown in many countries throughout the world, including India, Burma (Myanmar) and Australia. It is also grown in the United States, mostly in Florida as an ornamental shade tree, though its commercial production for neem products is increasing in the U.S. The neem tree is a botanical relative of mahogany. Neem tree products are associated with many agricultural and medicinal uses. It is widely relied on for herbal medicine in its native countries and is used in many cosmetic and pharmaceutical products as well as pest control in homes and crops.

The neem tree produces a compound called azadirachtin which protects it from damaging insects. Azadirachtin is a tetranortriterpenoid compound which influences the hormonal system, feeding activity, reproduction and flying ability of insects. Azadirachtin has low mammalian toxicity, it degrades rapidly in the environment, and has low side effects on non-target species and beneficial insects. Seeds of the neem tree contain the highest concentration of azadirachtin. There are several products registered in Alaska containing azadirachtin, including Azatin XL®, Bioneem®, and Ornazin®.

Neem seed oil (NSO) is composed of a complex mixture of biologically active compounds. When the natural neem oil is removed from the seeds and treated with alcohol, virtually all of the azadirachtin and related substances separate from the oil itself. The remaining oil - without the azadirachtin - is called Clarified Hydrophobic Extract of Neem Oil. Commercial products containing this extract, such as Trilogy®, Triact®, Rose Defense®, and Greenlight® Fruit, Nut & Vegetable Spray do not contain measurable amounts of azadirachtin and contain an emulsifying agent, so are not pure neem oil and may not be suitable for use on certified organic crops. Instead, use expeller expressed, cold pressed or virgin neem oil, sometimes called "raw" neem or "crude" neem oil.

More than a hundred terpenoid compounds have been identified from different parts of the neem tree. Azadirachtin is the most active of these. Several different kinds of azadirachtin have been isolated, the most abundant of which is Azadirachtin-A. In most traditional preparations of neem as pesticide or medicine, a mixture of neem chemicals are present and provide the active principles.

Mode of Action: Neem has many main modes of action with the primary role of disrupting an insect's metamorphosis. The principle active ingredient, azadirachtin, acts as an insect growth regulator (IGR) preventing exoskeleton development and impeding the molting process. It is most effective on younger stages of an insects development than when they have reached their adult form. Best control is achieved when insect populations are light to moderate. There are more than 25 other active compounds found in neem, including meliantriol, vepol, and salannin. It has a garlic like odor, and an extremely bitter taste. Its extremely bitter flavor can make many insects stop feeding on the host plant. Neem oil can also suffocate mites, whiteflies, aphids and other types of soft bodied insects on contact. These multiple modes of action make it unlikely that insects and plant pathogens can develop resistance to neem compounds.

Neem has both contact and systemic action in many plants. When it is applied to soil as a drench, some plant species absorb it through their roots and will translocate it through the plant tissue.

As a fungicide neem is mainly used as a preventative and when disease is just starting to show. It coats the leaf surface which in turn prevents the germination of the fungal spores. Neem oil and clarified hydrophobic extracts of neem oil is effective against rots, mildews, rusts, scab, leafspot and blights.

Application and Use: Neem is used in both ornamental and food crops. Raw neem seed oil (not extracts of neem oil) can be used mixed with water and an emulsifying agent such as pure castille soap. One general purpose application rate is to use neem oil at a 1% ratio to water with an emulsifying agent or non-ionic spray adjuvant. Some commercial products containing clarified hydrophobic extract of neem oil contain a surfactant that accomplishes this emulsifying process. Use raw neem seed oil at a ratio of 0.5% to 2.0% depending upon the targeted use. Apply it as a foliar spray keeping it agitated during application to keep it well mixed. It must be used within 8 hours after mixing with water. For other commercially prepared products containing neem oil (usually 70% clarified hydrophobic extract of neem) follow the manufacturers label rates and precautions. (see: Horticultural Oils for more information on using oil sprays)

Neem has been used with success in Alaska for aphids, cutworms, fungus gnats, shore flies, leaf-miners, thrips, powdery mildew and many others. Various products containing neem oil, clarified hydrophobic extract of neem, azadirachtin, and other neem compounds are registered for use in Alaska. Pure neem seed oil containing all of the active liminoid compounds is also readily available in Alaska, however some of these pure neem compounds are not labeled for pesticide use. One product containing 100% neem oil is often sold in garden centers next to the insecticides and fungicides implying it is recommended for use as a pesticide, but it is only advertised by the manufacturer as an organic leaf polish.

Products containing extracts of neem oil are registered pesticides, tested and approved by the EPA for use as a pesticide. Remember, extracts of neem have had the active compounds found in neem oil removed during the refining process, and these products usually contain alcohol or phenol used in the extraction process. These extracts of neem have an emulsifier added to help it mix readily with water. Pure or "crude" neem seed oil must be mixed with an emulsifying agent to accomplish this. Pure castille soap can be used as an emulsifier when using pure neem seed oil. Warm water should be used when using crude neem oil since it becomes solid at low temperatures.

Neem oil has also been used for insects other than those that feed on plants. Spiders, (see: A Natural Spider Control Program) cockroaches, grain weevils, and other pests of homes and stored food are reputed to be repelled, or killed by neem oil compounds. Neem has been used for thousands of years to protect grain in its native countries. It is often formulated into shampoo, creams, lotions, and even toothpaste. It is useful as a natural remedy for head lice, scabies, and as a mosquito and biting fly repellent.

Ecological effects: It is non toxic to humans, birds, earthworms or animals. Being an oil it can affect some beneficial insects if it is actually sprayed on them so it is recommended to use it prior to releasing beneficials or to conduct a trial to observe its effects on the organism prior to large scale use. Once the spray has dried it will not hurt most beneficial organisms, including lady beetles, lacewings, orius

bugs, and predatory mites.

Horticultural Oil and Insecticidal Soap

Two of the very best choices for sensible pest control are horticultural oil and insecticidal soap. They control more of the pests that trouble our landscape plants, garden plants and house plants than an arsenal of synthetic pesticides and do it with minimal danger to us, our pets and the earth. Horticultural oils are the modern descendants of the dormant oils used by our grandparents to protect their fruit trees from overwintering pests such as scale. Dormant oil could not be used on plants in leaf because the low level of refinement left impurities that caused damage. Only in the last decade have new techniques produced ultra-refined (also known as superior) oils that will not cause damage when applied according to directions to plants in leaf. Now you can find products such as Bonide All Season Oil that can be used safely anytime. Like the oils, insecticidal soaps have taken their place in the gardener's arsenal as an alternative to many compounds that remain in the soil or can contaminate ground water. There are no elaborate requirements for special protective clothing when using oils or soaps and no restriction on eating vegetables, fruits or herbs sprayed with them.

Soaps and oils are most effective on sucking insects such as spider mites, aphids, scale and whiteflies. Though they are not effective against most adult chewing insects such as caterpillars and beetles, they are effective against the larval stages of many of them. Timing the application is the most important factor when using these products against any pest. Unlike their chemical counterparts, using soaps and oils doesn't increase pesticide resistance because their mode of action is mechanical, not chemical. Oils smother insects and their eggs. Soaps disrupt their membranes. Oils have several other benefits including their protective effects against viral diseases and several types of fungus. Aphids are a major carrier of plant viruses, and oils have shown effectiveness as a protector against transmission of the viruses as well as controlling the aphids. Powdery mildew, black spot on roses, alternaria leaf blight on melons and early blight on tomatoes are all fungus diseases prevented by timely oil sprays, especially in conjunction with bicarbonate of soda. Finally, if it becomes necessary to use a stronger chemical than these, the oil can often enhance the effectiveness of the chemical pesticide when mixed with it, thus reducing the amount you must use.

Misconceptions

There are several misconceptions about soaps and oil. You may hear and read about substituting dish soap (or liquid laundry detergent) for insecticidal soap. Home dish soaps often damage plants when they are substituted for insecticidal soap and they generally are not as effective in killing the insects. The damage may be clear (browning edges or spots on the leaves) or it may also be less evident. Tests done on tomatoes and cucumber show that spraying with the homemade soap solutions reduces and delays the yield of vegetables. Dish soaps commonly found in grocery stores today are no longer soap. They are all detergents. In addition, they all contain a lengthy list of moisturizers, degreasers, fragrances and dyes that can add to the damage of the detergent. In addition, the household products vary greatly in concentration and effective rates of application have not been established. Insecticidal soaps are only slightly more expensive than dish detergents, but they will do their job without plant injury when used as directed. Occasionally, you will run into a recommendation to substitute a fine vegetable oil instead of horticultural oil. The ultra-refined horticultural oils are much easier to use since they will stay mixed into the water long enough for you to spray. Vegetable oils are also larger particles that are difficult to force through a sprayer. We recommend using the ultra-refined products manufactured for horticultural use.

Using Horticultural Oil

Horticultural oil can be the solution to many of your garden problems, but there is no one-size-fits-all remedy in horticulture. Horticultural oil is not tolerated by some plants, notably ferns and black walnut trees or other members of the genus Juglans. It should not be sprayed on plants with blue foliage such as blue spruce or blue hosta. Since their color is the result of the waxy coating on their leaves or needles, the application of oil may remove it, leaving them green instead.

Cautions before spraying: Plants under water stress (at or near wilting) may be damaged by horticultural oil. When in doubt, water the plant before spraying. If it is wilted, water the plant and wait for it to recover before spraying.

When to spray: The ideal time to spray is on a cool, cloudy morning when there is no wind and the temperature is between 40° and 90°. The spray should dry before direct sun falls on the plant or before freezing occurs. If it rains before the leaves are dry will wash the oil away and make re-spraying necessary. If your plants are under attack by a heavy insect infestation while the weather is uncooperative, particularly while it is too hot, spray them

with water to knock off as many pests as possible, then wait for more favorable conditions.

How to spray: Be sure to mix the oil with water at the recommended rate. A stronger solution is likely to cause leaf damage. Agitate the sprayer often to keep the lighter oil mixed with the water. Always try to cover both sides of the leaves when you spray. Most insects hide beneath leaves or along the stems. Remember that oil must contact the pest to kill it. There is no residual killing action, but the coating it makes on leaves and stems can protect against transmission of some plant viruses and fungi.

Horticultural oil used as a fungicide: By mixing baking soda with the horticultural oil solution you can make a very effective, nontoxic fungicide. Add one rounded tablespoon of baking soda along with one tablespoon of horticultural oil to a gallon of water to make a spray that helps prevent powdery mildew, black spot and several other fungal leaf problems. Fungicides of all kinds are preventive not curative, so you must use them before or just as an infection sets in. They will not cure an advanced case. However, since oil and baking soda mixed according to directions is nontoxic, it can safely be used as often as weekly to prevent these problems.

Using Insecticidal

Soap NOTE: Horticultural insecticidal soaps are not the same as dish soap or liquid laundry soaps. Insecticidal soaps are potassium salts of fatty acids and their purity and concentration is controlled.

Cautions: Plants that should not be sprayed with insecticidal soap include horse chestnut, mountain ash, Japanese maple, jade, lantana, gardenia, bleeding heart and crown of thorns. Also some cultivars of azaleas, poinsettias, begonias, impatiens, ferns, palms and succulents are sensitive to soap. If in doubt, try a small area first and wait 24 hours to see if any damage develops. As with using horticultural oil, plants under water stress should not be sprayed. Water them before spraying if you are not sure. Wait until they have recovered if they were wilted.

When to spray: Once the insecticidal soap has dried on the plant it is no longer effective, so conditions that favor slow drying are best. Early or late in the day when the air is calm and cooler are good choices. Immediately after a rain or other times of high humidity and clouds are also good. Avoid hot, windy days or when the sun is falling directly on the plants that need to be sprayed.

How to spray: Be sure to coat the bottoms of the leaves as well as the tops. Most insects, their larvae and eggs are found under the leaves or along the stems.

Follow-up: Insects vary in their susceptibility to insecticidal soap and horticultural oil. Often the eggs or pupae are resistant to one or the other, so it is important to follow up with another spray in 4 or 5 days and in the case of tough problems like the whitefly, use a third spray, especially if the infestation has been severe. Due to their low toxicity, oils and soaps can be used as needed without fear of build up on the plant or in the soil.

Note: Spraying the plant first with a fine mist of water will make the soap a more effective insecticide.

Miticide/Insecticide

For control of leafminers and mites and suppression of aphids, whiteflies, and thrips on ornamental plants

Recommended for Agricultural/Commercial Use

Active Ingredients:

Abamectin (CAS No. 65195-56-4 and 65195-55-3) 2.0%

Other Ingredients: 98.0%

Total: 100.0%

*1 gal. contains 0.15 lb. abamectin

KEEP OUT OF REACH OF CHILDREN.

WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See additional precautionary statements and directions for use inside booklet.

EPA Reg. No. 100-896

EPA Est. 39578-TX-001

SCP 896A-L6A 0904

1 gallon

U.S. Standard Measure

syngenta

FIRST AID

If swallowed	<ul style="list-style-type: none"> • Call poison control center or doctor immediately for treatment advice. • Do not give any liquid to the person. • Do not induce vomiting unless told to do so by the poison control center or doctor. • Do not give anything by mouth to an unconscious person.
If in eyes	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center or doctor for treatment advice.
If on skin or clothing	<ul style="list-style-type: none"> • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes. • Call a poison control center or doctor for treatment advice.
If inhaled	<ul style="list-style-type: none"> • Move person to fresh air. • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. • Call a poison control center or doctor for further treatment advice.

NOTE TO PHYSICIAN

Early signs of intoxication include dilation of pupils, muscular incoordination, and muscular tremors. Toxicity following accidental ingestion of Avid can be minimized by early administration of chemical adsorbents (e.g., activated charcoal).

If toxicity from exposure has progressed to cause severe vomiting, the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive parental fluid replacement therapy should be given, along with other required supportive measures (such as maintenance of blood pressure levels and proper respiratory functionality) as indicated by clinical signs, symptoms, and measurements.

In severe cases, observations should continue for at least several days until clinical condition is stable and normal. Since abamectin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (barbiturates, benzodiazepines, valproic acid) in patients with potentially toxic abamectin exposure.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

HOT LINE NUMBER

For 24-Hour Medical Emergency Assistance (Human or Animal)
Or Chemical Emergency Assistance (Spill, Leak, Fire or Accident)

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

WARNING

Causes substantial, but temporary eye injury. Do not get in eyes or on clothing. Prolonged or frequently repeated exposure may cause allergic skin reactions in some individuals. Harmful if inhaled or absorbed through the skin. Do not breathe spray mist. Avoid contact with skin. May be fatal if swallowed.

Personal Protective Equipment

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category B on an EPA chemical-resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves—EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils).
- Shoes plus socks
- Protective eyewear

For shadehouse and greenhouse uses, applicators and other handlers must wear a dust/mist filtering NIOSH approved respirator with any R, P, or HE filter.

Wear chemical-resistant headgear for overhead exposure. Wear chemical-resistant apron when cleaning equipment, mixing, or loading. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Environmental Hazards

This pesticide is toxic to fish and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash water or rinsate.

This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

Physical or Chemical Hazards

Do not use or store near heat or open flame.

ATTENTION

This product contains a chemical (N-methyl pyrrolidone) known to the state of California to cause birth defects or other reproductive harm.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, Inc. or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of the product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and Buyer and User assume the risk of any such use. SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall SYNGENTA or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. **THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.**

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.

DIRECTIONS FOR USE

It is a violation of Federal (U.S.A) law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Chemical-resistant gloves—EPA chemical-resistance category B (e.g., barrier laminate or butyl rubber ≥ 14 mils).
- Shoes plus socks
- Protective eyewear
- Chemical-resistant headgear for overhead exposure

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR INSECT CONTROL, AND/OR ILLEGAL RESIDUES.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not reenter treated areas until sprays have dried.

GENERAL INFORMATION

Avid 0.15EC is an emulsifiable concentrate containing 0.15 lb. abamectin/gal. which when mixed with water according to the directions for use will control leafminers and mites and suppress whiteflies, thrips, and aphids on ornamentals.

Mix with sufficient water and apply as a foliar spray to obtain uniform coverage. For mites, apply when mites first appear and repeat as necessary to maintain control. For leafminers, apply as needed and repeat at 7-day intervals or as necessary to maintain control.

For suppression of aphids, thrips, and whiteflies apply when young, immature stages of these pests are first observed and repeat every 7 days for 2 or 3 weeks. After which time, rotate to other products that have different modes of action than Avid for at least 2-3 weeks. Refer to the **Resistance Management** section for additional comments on rotation. Aphids, thrips, and whiteflies are killed by direct contact with the Avid spray.

Residual control of pests may be enhanced with the addition of a horticultural spray oil at 0.5 to 1.0% of the spray volume on field-grown woody ornamentals, landscape plants, and Christmas trees. Repeat application as necessary, but no sooner than 7 days to maintain control. Some plants are sensitive to oils and so without prior experience the user should spray a small number of plants and observe plants for 2 weeks before spraying the remaining plants. Excessive cold or warm temperatures may increase the chance of plant damage following application with oils. Carefully read and follow directions on the oil label and do not exceed maximum rates listed on either label.

Resistance Management

Treatment may not be effective against these pests if Avid tolerant strains develop. Therefore, when applying Avid to plants that are hosts of labeled pests with multiple generations per crop or year, resistance management strategies must be used. Such strategies may include, but are not limited to, rotation of products with different modes of action, avoid treatment of successive generations with the same product, use of labeled rates at specified spray intervals, non-chemical alternatives such as beneficial arthropods, rotation of susceptible to non-susceptible plants, and various cultural practices. For additional information on the implementation of these or other resistance management strategies, consult with your State Cooperative Extension Service.

To manage susceptibility in *Liriomyza* leafminer species, apply a maximum of three applications of Avid and then rotate to Citation® for a maximum of three applications, before rotating back to Avid or using another product. The rotation between these two products with different modes of action should be based on the generation time of *Liriomyza* specie to avoid applying Avid to successive generations.

Restrictions

Do not use Avid for suppression of aphids, whiteflies, and thrips on roses, chrysanthemums, and gerbera. These ornamentals are primary hosts of mites and *Liriomyza* leafminers for which Avid applications should be targeted. Additional applications of Avid to suppress aphids, thrips, and whiteflies on these plants will increase the selection pressure on mites and *Liriomyza* leafminers which may result in greater tolerance to Avid among these pests. Do not apply this product through any type of irrigation system.

Not for aerial application.

Do not use in citrus nurseries.

Avid has been evaluated for phytotoxicity on a wide range of ornamental plants. However, since all combinations or sequences of pesticide sprays including surfactants and adjuvants have not been tested, it is recommended that a small area be sprayed first to make certain that no phytotoxicity occurs. Phytotoxicity has been observed following the use of Avid on certain species of ferns (e.g., *Adiantum* spp.) and Shasta Daisy (*L. eucanthemum* spp.). It is therefore recommended that Avid not be used on ferns or Shasta Daisy.

CROP USE DIRECTIONS

Shadehouse, Greenhouse, Field-Grown Ornamentals, Foliage Plants, Christmas Trees, and Other Woody Ornamentals

Pests	fl. oz./100 gal.	Comments
Mites: ¹ European Red Mite Twospotted Spider Mite Camine Spider Mite Southern Red Mite Spruce Spider Mite Tarsonemid Mites ³ Cyclamen and Broad Mites Eriophyid Mites: Rust and Bud Mites	4	³ For tarsonemid mites, repeat applications to newly developing tissue may be necessary to maintain control.
<i>Liriomyza</i> Leafminers ²	8	Repeat at 7-day intervals or as necessary to maintain control.
Boxwood Leafminer	8	For control of mining larvae, make the application when adults are beginning to lay eggs in the new foliage.
Aphids, Thrips, and Whiteflies	8	For suppression of pest populations, young immatures must be contacted by the spray.

General Information Per Application: Do not apply less than 8 fl. oz. or more than 16 fl. oz./A. Use sufficient water to obtain uniform plant coverage. Refer to the **Resistance Management** section and the **Restrictions** section for additional information.

¹Apply, for example, in 200-400 gals. of water/A. In volumes of water below 200 gals., use a minimum of 8 fl. oz./A. If more than 400 gals. of water/A are required for good plant coverage, apply a maximum rate of 16 fl. oz./A. For example, if 650 gals. of water are required, use 2.5 fl. oz./100 gals.

²Apply, for example, in 100-200 gals. of water/A. In water volumes below 100 gals., use a minimum of 8 fl. oz./A. If more than 200 gals. of water per acre are required for good plant coverage, apply the maximum rate of 16 fl. oz./A. For example, if 400 gals. of water are required, use 4 fl. oz./100 gals.

STORAGE AND DISPOSAL

Storage

Store in a tightly closed container in a cool, dry place.

Prohibitions

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

Pesticide Disposal

Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal

Triple rinse (or equivalent) and dispose of in an incinerator or landfill approved for pesticide containers.

For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup procedures and disposal of wastes.

Floramite™

ORNAMENTAL MITICIDE IN WATER SOLUBLE BAGS

Active Ingredient: (% by weight)
Bifenazate: Hydrazine carboxylic acid, 2-(4-methoxy-[1,1-biphenyl]-3-yl)
1-methylethyl ester 50%
Inert Ingredients: 50%

Net contents:
1 pound
(16x1 oz. water
soluble bags)

KEEP OUT OF REACH OF CHILDREN CAUTION

FIRST AID

IF IN EYES

- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lens, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also call the following telephone numbers for emergency medical treatment

UNIROYAL CHEMICAL EMERGENCY PHONE	203-723-3670
SAFETY DATA AND INFORMATION	203-573-3303
TRANSPORTATION EMERGENCY (CHEMTREC)	800-424-9300

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Causes moderate eye irritation. Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling.

PERSONAL PROTECTIVE EQUIPMENT

Applicators and Other Handlers Must Wear: Long-sleeved shirt and long pants; shoes plus socks.

Follow manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters. This product is toxic to bees exposed to direct treatment but residues on treated foliage are not toxic to bees. Do not apply this product while bees are actively visiting the treatment area.

PHYSICAL OR CHEMICAL HAZARDS

Do not use or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product through any type of irrigation system.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- coveralls
- shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.

GENERAL INFORMATION

FLORAMITE is a wettable powder in water soluble bags.

FLORAMITE is a selective miticide for the control of a variety of mite pests on all types of ornamental plants, including bedding plants, flowering plants, foliage plants, bulb crops, perennial plants and woody plants. FLORAMITE may also be applied to fruit trees which will not bear for a minimum of 12 months. FLORAMITE can be used in all areas where these plants are grown and/or maintained in containers or in the ground, including:

- Greenhouses and shadehouses
- Nurseries, including Christmas tree/conifer plantations
- Landscapes
- Interiorscapes
- Residences
- Public, commercial, industrial and institutional areas
- Recreational sites, such as campgrounds, golf courses, parks and athletic fields
- Rights of way and other easements

When used as directed and applied to the foliage, FLORAMITE provides quick knockdown through contact activity, and long residual control. Due to its unique chemistry, mode of action and selective nature, FLORAMITE is relatively inactive against beneficial / predatory mites and insects, and therefore is compatible with IPM and resistance management programs.

MIXING INSTRUCTIONS

Fill the spray tank with 1/2 the desired amount of water. Then add the required number of water-soluble bags of FLORAMITE with agitation running to fully disperse the product. Then fill the tank with the remaining amount of required water.

FLORAMITE has been shown to degrade rapidly when mixed and stored with alkaline water of high temperature (122°F). To prevent degradation under alkaline conditions, solutions of FLORAMITE must be used promptly. Alternatively, a commercially available buffering adjuvant can be added to the solution to reduce the pH to a neutral / acidic range.

Compatibility: To obtain broad spectrum insect control, FLORAMITE can be tank-mixed with other insecticide products. However, due to variations in water quality, e.g., hardness and pH, it is required that users conduct small scale trials under local conditions to ensure compatibility prior to any large scale use.

When tank mixing, thoroughly mix the water soluble bags before adding other products in the following order: other water soluble bags, wettable powders, dry flowables, liquid flowables, liquids and emulsifiable concentrates. Always allow each tank mix partner to disperse fully before adding the next product. Do not add boron containing or free chlorine releasable products with water soluble bag formulations. Boron and free chlorine will inhibit the solubility of the water soluble bag material causing it to precipitate and form insoluble residue inside the spray tank.

Restrictions: Do not sell individual water soluble packets. Do not handle the inner bag with wet hands or wet gloves. Do not allow pouches to become wet prior to adding to the spray tank. Tank mixtures are permitted only in those states where the tank mix partner is registered. When tank mixing, follow the label directions for the most restrictive of label precautions and limitations.

USE RATES AND RECOMMENDATIONS

Mix 2 to 4 ozs. (2 to 4 water-soluble bags) FLORAMITE in 100 gals. of water and apply as a full coverage spray to the foliage using a minimum volume of 1-2 qts. of final solution per 100 sq.ft. (or 100 - 200 gals. per acre). Actual spray volume will vary depending on the size of plants being treated. Application should be made as soon as mites appear and will provide residual control for up to 28 days. Use the low rate for preventative applications where mite infestations are light. The higher rate may be required for heavy infestations or for extended residual control. For optimum coverage of hard to wet foliage, it is recommended that an adjuvant be added to the Floramite/water solution. Those found to be both safe and effective are Silwet L-77 or Sylgard 309® at 4 oz. per 100 gallons of water. Users should test safety and compatibility of all adjuvants prior to commercial use.

When used as directed, FLORAMITE is effective for the control of a variety of mites species, especially spider mites, red mites and grass mites. NOTE: It is not effective against rust mites, broad mites and flat mites. FLORAMITE is primarily active on the motile stages of mites, but also has ovicidal activity against spider mites (*Tetranychus* species). Common mite species controlled by FLORAMITE include:

COMMON NAME	SCIENTIFIC NAME
Two spotted spider mite	<i>Tetranychus urticae</i> (Koch)
Pacific mite	<i>Tetranychus pacificus</i> (McGregor)
Strawberry mite	<i>Tetranychus turkestanii</i>
European red mite	<i>Panonychus ulmi</i> (Koch)
Citrus red mite	<i>Panonychus citri</i> (McGregor)
Clover mite	<i>Bryobia praetiosa</i> (Koch)
Southern red mite	<i>Oligonychus ilicis</i> (McGregor)
Spruce spider mite	<i>Oligonychus ununguis</i> (Jacobi)
Bamboo spider mite	<i>Schizotetranychus celarius</i> (Banks)

Restrictions:

Do not use FLORAMITE in successive applications.

Apply only one application of FLORAMITE before rotating to products of an alternative chemical class.

Use at least two alternative products between treatments of FLORAMITE.

Do not apply more than 16 ozs. of FLORAMITE per acre, per year.
Do not make more than two (2) applications of FLORAMITE per crop per year.

Apply FLORAMITE by ground equipment such as, but not limited to compressed air, hydraulic, ground boom and air blast sprayers. Do not apply by aerial application.

STRATEGIES FOR RESISTANCE MANAGEMENT

FLORAMITE when used as directed, combines high activity on mites with selectivity to beneficial / predacious mites and insects. In addition, the unique chemistry of FLORAMITE provides a means of controlling mites which have developed resistance to more commonly used products. These properties can result in fewer miticide / insecticide applications as well as general reduction in the problems caused by resistance.

To reduce selection pressure which can lead to the development of resistance, FLORAMITE should be used in moderation. To help achieve this, the following strategies are recommended:

- Incorporate IPM techniques into your insect control program.
- Ensure thorough spray coverage to all foliage.
- Scout regularly and apply FLORAMITE as soon as infestations are observed. Do not wait until large populations have established.
- Always apply FLORAMITE at the recommended rates and according to label recommendations.
- Use FLORAMITE in conjunction with biological control organisms available for mite control. FLORAMITE when used as directed, does not adversely affect populations of beneficial / predacious mites and insects, including:

Predatory Mites	Beneficial Insects
<i>Phytoseiulus persimilis</i>	<i>Chrysoperla carnea</i> (common green lacewing)
<i>Neoseiulus spp.</i>	<i>Aphidius colemani</i>
<i>Typhlodromus spp.</i>	<i>Aphidoletes aphidomyza</i>
<i>Amblyseius spp.</i>	<i>Orius insidiosus</i> (insidious pirate bug)
<i>Zetzellia mali</i>	<i>Iphiseius degenerans</i>
	<i>Coccinella septempunctata</i>
	<i>Hippodamia convergens</i>
	<i>Stethorus punctum</i>
	<i>Diglyphus isaea</i>
	<i>Eretmocerus eremicus</i>
	<i>Cotesia marginiventris</i>

The use of these organisms in conjunction or alternation with FLORAMITE is encouraged as a means of reducing the number of chemical applications.

PLANT TOLERANCE

Neither the manufacturer nor the seller has determined whether or not FLORAMITE can be used safely on all ornamental plants. FLORAMITE has been tested on a variety of ornamental plants with no phytotoxicity observed at label rates. However, all plant species and their varieties and cultivars have not been tested with possible tank mix combinations, sequential pesticide treatments and adjuvants and surfactants. Therefore, prior to any large scale application to ornamental plants, the user should determine the safety of FLORAMITE by testing a small number of the plant cultivar to be treated at the recommended rates to ensure that phytotoxic response will not occur. The end user assumes all risks arising out of application in a manner inconsistent with its labeling.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

STORAGE: Store in a dry location.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Place water soluble bag directly into application equipment (see directions). Then dispose of empty outer bag in a sanitary landfill or by incineration, or if allowed by State and local authorities, by burning. If burned, stay out of smoke.

IMPORTANT NOTICE—Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with the directions and instructions specified on the label under normal conditions of use, but neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, express or implied, extends to the use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to seller, and buyer assumes the risk of any such use.

Sustane® 2 • 3 • 3
All Natural Organic
80% Slow Release Nitrogen Fertilizer / Soil Builder

Sustane® 2-3-3 granulated compost is a natural organic fertilizer and long term soil builder, derived from biologically active compost through a proprietary controlled aerobic process. Sustane® 2-3-3 granulated compost works by replenishing the soil with a rich supply of humus (stabilized organic matter) and the nutrients required for sound integrated turf management and long term soil building programs.

Applications

Topdressing • Grounds Maintenance • Nurseries • Landscaping

EPA Reg. No. 62719-473

Keep Out of Reach of Children

CAUTION PRECAUCION

Si usted no entiende la etiqueta, busque a alguien para que se la
explique a usted en detalle. (If you do not understand the label, find
someone to explain it to you in detail.)

Precautionary Statements

Hazard to Humans and Domestic Animals

Causes Moderate Eye Irritation • Harmful If Absorbed Through Skin

Avoid contact with skin, eyes or clothing.

Personal Protective Equipment (PPE)

WPS USES: Applicators and other handlers who handle this pesticide for
any use covered by the Worker Protection Standard (40 CFR part 170) -
in general, agricultural plant uses are covered - must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no
such instructions for washables, use detergent and hot water. Keep and
wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a
manner that meets the requirements listed in the Worker Protection
Standards (WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)],
the handlers PPE requirements may be reduced or modified as specified
in the WPS.

NON-WPS USES: Applicators and other handlers who handle this
pesticide for any use NOT covered by the Worker Protection Standard
(40 CFR part 170) - in general, only agricultural plant uses are covered by
the WPS - must wear:

- Shirt and pants
- Gloves
- Shoes plus socks

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or
using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash
thoroughly and put on clean clothing.

First Aid

If in eyes: Hold eye open and rinse slowly and gently with water for
15-20 minutes. Remove contact lenses, if present, after the first
5 minutes, then continue rinsing eye. Call a poison control center or
doctor for treatment advice.

If on skin or clothing: Take off contaminated clothing. Rinse skin
immediately with plenty of water for 15-20 minutes. Call a poison control
center or doctor for treatment advice.

Have the product container or label with you when calling a poison
control center or doctor, or going for treatment. You may contact
1-800-992-5994 for emergency medical treatment information.

Environmental Hazards

For terrestrial uses, do not apply directly to water or to areas where
surface water is present or to intertidal areas below the mean high water
mark. Do not contaminate water when cleaning equipment or disposing
of equipment washwaters.

This chemical has the properties and characteristics associated with
chemicals detected in groundwater. The use of this chemical in areas
where soils are permeable, particularly where the water table is shallow,
may result in groundwater contamination.

Notice: Read the entire label. Use only according to label directions.
**Before using this product, read Warranty Disclaimer, Inherent Risks
of Use, and Limitation of Remedies elsewhere on this label.**
If terms are unacceptable, return at once unopened.

In case of emergency endangering health or the environment involving
this product, call 1-800-992-5994. If you wish to obtain additional product
information, visit our web site at www.dowagro.com.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or
clothing.

Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

Agricultural Use Requirements

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exemptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Waterproof gloves
- Shoes plus socks

Non-Agricultural Use Requirements

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Keep children and pets out of treated area until dusts have settled.

Storage and Disposal

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry, well-ventilated area. Prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of reach of children.

Pesticide Disposal: Wastes resulting from the use of this product (that cannot be used according to label instructions) may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Steps to be Taken if Material is Released or Spilled: Appropriate protective equipment must be worn when handling a spill of this material. If the container is leaking or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with handling of this material. Do not walk through spilled material. Dispose of pesticide as directed above. In spill or leak incidents, keep unauthorized people away.

General Information

MACH 2* 1.5G specialty insecticide can be used as directed on any turfgrass site (lawns, sod, turf areas). Examples of such sites include, but are not limited to: residential and commercial lawns, grounds or lawns around business and office complexes, shopping centers, multi-family and residential apartment complexes, airports, military and other institutions, cemeteries, parks and picnic areas, playgrounds, schools, athletic fields, golf courses, and sod farms. MACH 2 1.5G mimics the action of a natural insect hormone that induces the molting and metamorphosis process in insects. MACH 2 1.5G is highly active against grubs and lepidopterous larvae listed as target pests. MACH 2 1.5G controls listed larvae through a novel mode-of-action that starts within hours of ingestion. Actual death of larvae may take several days to occur.

Use Rate Determination

Carefully read, understand, and follow label use rates, recommendations and restrictions. Apply the amount specified in the following table with a properly calibrated granular spreader. Check calibration periodically to ensure that equipment is working properly. Avoid overlaps that will increase rates above those recommended. Failure to follow the Directions for Use and all precautions on this label may result in grass injury or poor pest control.

Application Timing

The activity of MACH 2 1.5G is expressed following ingestion by the target larvae. Consequently, the timing of application is dependent upon the feeding behavior of the target pest. Consult your local State Extension Specialists for more specific information regarding timing of applications.

To achieve optimal effectiveness, the following turf management practices are suggested:

- **Minimize thatch** since heavy thatch will prevent the insecticide from penetrating to the area where insects are feeding.
- **Make applications prior to egg hatch or when larvae are small** and actively feeding (late spring through mid summer).
- **MACH 2 1.5G is not dependent upon immediate irrigation for activation;** however, water must transport the material through the thatch. Under conditions of drought it is recommended to water in MACH 2 1.5G.

Use Directions for Turfgrass

Pest	Amount of MACH 2 1.5G	Comments
Lepidoptera larvae such as: larvae of cutworms, sod webworms, armyworms, and fall armyworms	67 lb/acre (1.55 lb/1000 sq ft)	Apply MACH 2 1.5G at first sign of pest damage. A single repeat application can be made if needed.
White grub larvae such as: Japanese beetle, <i>Popillia japonica</i> Northern masked chafer, <i>Cyclocephala borealis</i> , Southern masked chafer, <i>Cyclocephala lurida</i> , May/June beetle, <i>Phyllophaga</i> spp., Black turfgrass ataenius, <i>Ataenius spretulus</i> , Green June beetle, <i>Cotinus nitida</i> , Annual bluegrass weevil larvae, <i>Hyperodes</i> spp., Billbugs, <i>Sphenophorus</i> spp., Aphodius beetle, <i>Aphodius</i> spp., European chafer, <i>Rhizotrogus majalis</i> , Oriental beetle, <i>Exomala orientalis</i>	133 lb/acre (3 lb/1000 sq ft)	MACH 2 1.5G may be used as either a preventative or an early curative treatment (see application timing instructions). Make one application at full rate.

Do not apply more than 133 lb (2 lb active ingredient) per acre per year regardless of pests controlled.

Use of this product on "Tifdwarf" Bermudagrass greens may result in short term discoloration of the turfgrass. Since many agronomic factors may influence this response it is recommended that users treat a small area at recommended rates prior to initiating large-scale use.

For Sod Farms: Allow at least 7 days to elapse between last application and harvest of sod.

Suggested Spreader Settings

Spreader Type	Ground or PTO Speed (mph)	Recommended Rates (lb/1000 sq ft)				
		Width of Coverage (ft)	1.5	2.3	3.0	Pattern Setting
LESCO rotary	3	8	D 1/2	F 1/4	X	0.0
Scott Rotaries (R-7, R-7X)	3	8	D	E 3/4	G	6
Scott Rotaries (R-8, R-8A, SR-1)	3	8	I	J	K	6
Cyclone	X	X	X	X	X	X
Spyker	X	X	X	X	X	X
Vicon (model 03)	5.6	19	13	15	17	X
PrizeLawn	3	4	3 1/4	3 1/2	X	A
Lely	4.5	22	3	3 1/2	4	II-C

Apply MACH 2 1.5G with a drop or rotary spreader designed to apply granular insecticides. Avoid the use of spreaders that would apply this product in narrow rows or concentrated bands. Calibrate the spreader according to the manufacturer's directions for adjusting the spreader settings such that the spreader delivers the appropriate application rate recommended above. Apply this product uniformly over the lawn or ornamental turf area. A more uniform application can be made by spreading half the required amount over the area and then applying the remaining half at a right angle to the previous direction. Avoid streaking, skips, or overlaps during application.

Terms and Conditions of Use

If terms of the following Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer, Inherent Risks of Use and Limitations of Remedies.

Warranty Disclaimer

Dow AgroSciences warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. Dow AgroSciences MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

Inherent Risks of Use

It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, tomatoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Dow AgroSciences or the seller. All such risks shall be assumed by buyer.

Limitation of Remedies

The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at Dow AgroSciences' election, one of the following:

- (1) Refund of purchase price paid by buyer or user for product bought, or
- (2) Replacement of amount of product used.

Dow AgroSciences shall not be liable for losses or damages resulting from handling or use of this product unless Dow AgroSciences is promptly notified of such loss or damage in writing. In no case shall Dow AgroSciences be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer, Inherent Risks of Use and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of Dow AgroSciences or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.

TRIMEC® 992

BROADLEAF HERBICIDE

**For Sale To And Use By Commercial Applicators
And Professional Landscapers Only.**

Not For Sale To Or Use By Homeowners.

Controls Dandelion, Clover, Knotweed,
Henbit, Chickweed, Plantain, Spurge
and many other broadleaf weeds.

ONE GALLON COVERS UP TO 2½ ACRES

KEEP FROM FREEZING

ACTIVE INGREDIENTS:

Dimethylamine salt of 2,4-dichlorophenoxyacetic acid 30.56%
Dimethylamine salt of (+)-(R)-2-(2-methyl-4-chlorophenoxy)
propionic acid 8.17%
Dimethylamine salt of dicamba: 3,6-dichloro-o-anisic acid 2.77%

INERT INGREDIENTS: 58.50%
TOTAL 100.00%

THIS PRODUCT CONTAINS:

2.38 lbs. 2,4-dichlorophenoxyacetic acid equivalent per gallon or 25.38%.
0.63 lbs. (+)-(R)-2-(2-methyl-4-chlorophenoxy) propionic acid equivalent per gallon or 6.75%.
0.21 lbs. 3,6-dichloro-o-anisic acid equivalent per gallon or 2.30%.

Isomer Specific by AOAC Methods.

Contains the single isomer form of Mecoprop-p.

KEEP OUT OF REACH OF CHILDREN DANGER-PELIGRO

Si Usted no entiende la etiqueta, busque a alguien para que se la explique a Usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See below for additional Precautionary Statements and First Aid.

**READ THE ENTIRE LABEL FIRST.
OBSERVE ALL PRECAUTIONS AND
FOLLOW DIRECTIONS CAREFULLY.**

PRECAUTIONARY STATEMENTS

Hazards to Humans & Domestic Animals:

DANGER: Corrosive. Causes irreversible eye damage. Causes skin irritation. Do not get into eyes, on skin or on clothing. May be fatal if swallowed.

NON-WPS USES:

Applicators and other handlers who handle this pesticide for any use NOT covered by the Worker Protection Standard (40 CFR Part 170) — in general, only agricultural-plant uses are covered by the WPS — must wear the following:

- Wear face shield or goggles when mixing, loading or applying this product. When mixing, loading or applying this product, wear long-sleeved shirt, long pants, socks, shoes, chemical-resistant gloves and eye protection. It is recommended that safety glasses include front, brow, and temple protection.

After using this product, rinse gloves before removing, remove clothing and launder separately before reuse, and promptly and thoroughly wash hands and exposed skin with soap and water. Remove saturated clothing as soon as possible and shower.

Engineering Control Statements

For Non-WPS Uses:

Containers over 1 gallon and less than 5 gallons: Persons engaged in open pouring of this product must also wear coveralls or a chemical resistant apron.

Containers of 5 gallons or more: Do not open pour from this container. A mechanical system (probe and pump or spigot) must be used for transferring the contents of this container. If the contents of a non-refillable pesticide container are emptied, the probe must be rinsed before removal.

WPS USES:

Applicators and other handlers who handle this pesticide for any uses covered by the Worker Protection Standard (40 CFR Part 170) — in general agricultural-plant uses are covered — must wear the following:

- Coveralls over short-sleeved shirt and short pants.
- Waterproof gloves.
- Chemical-resistant footwear plus socks.
- Protective eyewear.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. After each day of use, clothing or PPE must not be reused until it has been cleaned.

Engineering Control Statements For WPS Uses:

Containers over 1 gallon and less than 5 gallons: Mixers and loaders who do not use a mechanical system (probe and pump) to transfer the contents of this container must wear coveralls or a chemical-resistant apron in addition to the other required PPE.

Containers of 5 gallons or more: Do not open pour product from this container. A mechanical system (such as a probe and pump or spigot) must be used for transferring the contents of this container. If the contents of a non-refillable pesticide container are emptied, the probe must be rinsed before removal. If the mechanical system is used in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4)], the handler PPE requirements may be reduced or modified as specified in the WPS.

When handlers use closed systems or enclosed cabs in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations:

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

FIRST AID

If in eyes:	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15-20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.• Call a poison control center or doctor for treatment advice.
If on skin:	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15-20 minutes.• Call a poison control center or doctor for treatment advice.
If swallowed:	<ul style="list-style-type: none">• Call a poison control center or doctor immediately for treatment advice.• Have person sip a glass of water if able to swallow.• Do not induce vomiting unless told to do so by the poison control center or doctor.• Do not give anything by mouth to an unconscious person.
If inhaled:	<ul style="list-style-type: none">• Move person to fresh air.• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.• Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact 1-877-800-5556 for emergency medical treatment advice.

NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.

Environmental Hazards: This product is toxic to aquatic invertebrates. Drift or runoff may adversely affect aquatic invertebrates and nontarget plants. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwater. When cleaning equipment, do not pour the washwater on the ground; spray or drain over a large area away from wells and other water sources. Do not apply when weather conditions favor drift from target area. Do not contaminate domestic or irrigation waters.

Most cases of groundwater contamination involving phenoxy herbicides such as 2,4-D and MCPP-p have been associated with mixing, loading and disposal sites. Caution should be exercised when handling 2,4-D and MCPP-p pesticides at such sites to prevent contamination of groundwater supplies. Use of closed systems for mixing or transferring this pesticide will reduce the probability of spills. Placement of the mixing/loading equipment on an impervious pad to contain spills will help prevent groundwater contamination.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170.

This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 48 hours.

For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear: • Coveralls over short-sleeved shirt and short pants • Waterproof gloves • Chemical-resistant footwear plus socks • Protective eyewear.

SOD FARMS:

Trimec® 992 Broadleaf Herbicide is intended for use on sod farms. Trimec® 992 Broadleaf Herbicide provides selective broadleaf control in warm season and cool season turfgrass established for commercial sod production.

APPLICATION SCHEDULES FOR SOD FARMS:

Apply Trimec® 992 Broadleaf Herbicide to broadleaf weeds that are actively growing. Follow-up applications may be required for dense infestations of perennial and biennial weeds. Do not apply this product to 'Floratum' St. Augustinegrass.

NEWLY SEEDED AREAS:

The application of Trimec® 992 Broadleaf Herbicide to grass seedlings is recommended after the second mowing.

NEWLY SODDED, SPRIGGED OR PLUGGED AREAS:

The application of Trimec® 992 Broadleaf Herbicide to newly sodded, sprigged, or plugged grasses should be delayed until 3 to 4 weeks after the sodding, sprigging, or plugging operations. Also, applications to dormant bermudagrass, dormant zoysiagrass, and dormant bahiagrass are suggested.

APPLICATION RATES FOR SOD FARMS:

Dosage rates and spray volume recommendations of Trimec® 992 Broadleaf Herbicide for use in commercial sod production are presented in Table 1.

Generally, the lower application rates within the specified range will provide satisfactory control of sensitive weed species. The higher application rates within the specified range will be required for dense infestations of perennial weeds, for adverse/extreme environmental conditions, or for weeds beyond the appropriate growth stages.

The maximum application rate to turf is 1.3 pounds 2,4-D acid equivalent per acre per application per site.

Table 1. Rate Recommendations for Sod Farms.

Species	Amount of Product, Pints/Acre	Spray Volume, Gallons/Acre
Cool Season Turf		
Kentucky Bluegrass	3.0 to 4.0	5 to 175
Perennial Ryegrass	3.0 to 4.0	5 to 175
Fescue spp.	3.0 to 4.0	5 to 175
Creeping Bentgrass	1.8	5 to 175
Warm Season Turf		
Common Bermudagrass	2.0 to 2.5	5 to 175
Hybrid Bermudagrass	2.0 to 2.5	5 to 175
Bahiagrass	2.0 to 2.5	5 to 175
Zoysiagrass	2.0 to 2.5	5 to 175
St. Augustinegrass	2.0 to 2.5	5 to 175

USE PRECAUTIONS AND LIMITATIONS FOR SOD FARMS:

1. Do not apply this product through any type of irrigation system.
2. Avoid drift of spray mist onto vegetables, flowers, ornamental plants, shrubs, trees, and other desirable plants. Do not pour spray solutions near these plants.
3. Delay mowing 1 to 2 days before and after the application of this product.
4. Do not apply this product immediately before rainfall or irrigation. Do not irrigate or water the turfgrass within 24 hours after application.
5. Treated areas may be reseeded 3 to 4 weeks after application.

Non-Agricultural Use Requirements

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Reentry Statement: Do not allow people (other than applicator) or pets on treatment area during application. Do not enter treatment area until spray has dried or dust has settled.

ORNAMENTAL LAWNS AND TURFGRASS

WHERE TO USE:

Trimec® 992 Broadleaf Herbicide is intended to be applied by lawn care operators and landscape personnel for use in ornamental lawns and turf established in institutional, ornamental, and residential/domestic sites. Institutional sites are defined as turf areas around properties or facilities providing a service to public or private organizations including, but not limited to hospitals, nursing homes, schools, museums, libraries, sport facilities, golf courses, and office buildings. Ornamental sites include turfgrass established around residences, parks, streets, retail outlets, cemeteries, industrial and institutional buildings. Finally, residential/domestic sites are defined as areas associated with the household or home life including, but not limited to apartment complexes, condominiums, and patient care areas of nursing homes, mental institutions, hospitals, or convalescent homes.

HOW MUCH TO USE:

The maximum application rate to turf is 1.3 pounds 2,4-D acid equivalent per acre per application per site. The maximum number of broadcast applications per treatment site is 2 per year.

FOR KENTUCKY BLUEGRASS, FESCUE spp., PERENNIAL RYEGRASS, BERMUDAGRASS AND ZOYSIAGRASS. Apply 3.0 to 4.0 pints of Trimec® 992 Broadleaf Herbicide per acre with spray volumes ranging from 5 to 220 gallons per acre. Or, apply 1.1 to 1.5 fluid ounces of Trimec® 992 Broadleaf Herbicide per 1,000 square feet with spray volumes ranging from 0.5 to 5 gallons per 1,000 square feet of turf. For mature weeds, apply 3.25 to 4.0 pints of Trimec® 992 Broadleaf Herbicide per acre. The best time to control clover is in the fall. When making a spring application to control clover, a 4 pint per acre rate is recommended.

FOR CLOSELY MANAGED BENTGRASS. Apply a maximum rate of 1.8 pints of Trimec® 992 Broadleaf Herbicide per acre with spray volumes greater than 145 gallons per acre. The equivalent application rate would be 1.0 fluid ounce of Trimec® 992 Broadleaf Herbicide mixed with 5 gallons of water and applied to 1,500 square feet.

Note: Care should be taken to avoid overdosing bentgrass or injury may result. High spray volumes will provide uniform coverage.

FOR ST. AUGUSTINEGRASS. Apply 2.3 pints of Trimec® 992 Broadleaf Herbicide per acre with spray volumes ranging from 40 to 150 gallons per acre. The equivalent application rate would be 1.3 fluid ounces of Trimec® 992 Broadleaf Herbicide in 5 gallons of water per 1,500 square feet.

Do not spray St. Augustinegrass when stressed from heat or drought. Slight turf yellowing should disappear after about one week.

Cultivars vary in tolerance to this product. Do not apply this product to 'Floratum' St. Augustinegrass.

Note: Care should be taken to avoid overdosing St. Augustinegrass or injury may result. High spray volumes will provide uniform coverage.

REFER TO THE CHART BELOW FOR ADDITIONAL APPLICATION INSTRUCTIONS.

APPLICATION METHODS	REMARKS
A. KENTUCKY BLUEGRASS, FESCUE spp., PERENNIAL RYEGRASS, BERMUDAGRASS AND ZOYSIAGRASS.	
Conventional Equipment:	Use 5 to 80 gallons of water per acre. (0.5 to 2 gallons water per 1,000 square feet.)
Professional Lawn Maintenance:	Use 0.5 to 5 gallons of water per 1,000 square feet. Higher spray volumes may be used when tank-mixed with a turf fertilizer. Follow fertilizer labels for proper amounts to add.
Controlled Droplet Applicators (CDA):	Reduced rates of TRIMEC 992 must be used when grass is stressed from heat or drought. Add 2 pints TRIMEC 992 to the Herbi container then fill with 3 pints of water. Keeping the container agitated, spray entire contents over 33,000 square feet (approximately ¾ acre). Do not overlap between spray patterns. Do not use this application rate on warm season grasses.
B. CLOSELY MANAGED BENTGRASS.	
	On closely managed bentgrass (e.g. bowling greens) apply TRIMEC 992 at a maximum rate of 1.0 fluid ounce in 5 gallons of water per 1,500 square feet preferably in May or mid-August through September. Slight turf yellowing will disappear after about one week. (See Note.)
C. ST. AUGUSTINEGRASS.	
	Apply TRIMEC 992 at 2.3 pints in up to 150 gallons of water per acre (1.3 fluid ounces TRIMEC 992 in 5 gallons of water per 1,500 square feet). Do not spray St. Augustinegrass when stressed from heat or drought. Slight turf yellowing should disappear after about one week. (See Note.)
NOTE: Care should be taken to avoid overdosing bentgrass and St. Augustinegrass or injury may result. High spray volumes will aid in obtaining uniform coverage.

USE PRECAUTIONS FOR ORNAMENTAL LAWNS AND TURFGRASS:

Do not apply this product through any type of irrigation system. Avoid drift of spray mist to vegetables, flowers, ornamentals, shrubs, trees and other desirable plants. Do not pour spray solutions near these plants. Do not spray on carpetgrass, dichondra, nor on lawns or turf where desirable clovers are present.

Use only lawn type sprayers. Coarse sprays are less likely to drift. Use coarse spray droplets. Avoid fine mists. Do not spray roots of ornamentals and trees. Do not exceed specified dosages for any area. Be particularly careful within the dripline of trees and other ornamental species. Do not broadcast apply when air temperatures exceed 85°F; some injury may be expected with spot treatments when air temperatures exceed 85°F. Seed can be sown 3 to 4 weeks after application at recommended rates. After using this product, clean sprayer with soap or detergent and water or an approved spray tank cleaner and rinse thoroughly before applying other pesticides. Failure to observe the above precautions may result in injury.

Some hybrid bermudagrass may be sensitive to this product. Contact your Local Extension Service Weed Control Specialist.

Do not apply this product to St. Augustinegrass during spring green-up which is the transition period between dormancy and active growth.

STORAGE & DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

STORAGE: Store in original container in a locked storage area inaccessible to children or pets. Keep from freezing.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions,

contact your state Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: FOR METAL CONTAINERS: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities. FOR PLASTIC CONTAINERS: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

LIMITED WARRANTY AND DISCLAIMER

The manufacturer warrants only that the chemical composition of this product conforms to the ingredient statement given on the label, and that the product is reasonably suited for the labeled use when applied according to the Directions for Use.

THE MANUFACTURER NEITHER MAKES NOR INTENDS ANY OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH ARE EXPRESSLY DISCLAIMED. This limited warranty does not extend to the use of the product inconsistent with label instructions, warnings or cautions, or to use of the product under abnormal conditions such as drought, excessive rainfall, tornadoes, hurricanes, etc. These factors are beyond the control of the manufacturer or the seller. Any damages arising from a breach of the manufacturer's warranty shall be limited to direct damages, and shall not include indirect or consequential damages such as loss of profits or values, except as otherwise provided by law.

The terms of this Limited Warranty and Disclaimer cannot be varied by any written or verbal statements or agreements. No employee or agent of the seller is authorized to vary or exceed the terms of this Limited Warranty and Disclaimer in any manner.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION

HARMFUL IF ABSORBED THROUGH SKIN. CAUSES MODERATE EYE IRRITATION. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling.

Personal Protective Equipment (PPE)

Some materials that are chemically resistant to this product are listed below. If you want more options, follow the instructions for Category A on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards

The active ingredient, azoxystrobin, in this product can be persistent for several months or longer. Azoxystrobin has degradation products which have properties similar to chemicals which are known to leach through soil to groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

This pesticide is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Do not apply directly to water except as specified on this label. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high-water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Notify state and/or federal authorities and Syngenta immediately if you observe any adverse environmental effects due to use of this product.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product should be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, INC. or Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

Heritage®

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and Buyer and User assume the risk of any such use. SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall SYNGENTA or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. **THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.**

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USES

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

- Coveralls
- Chemical resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks

NON-AGRICULTURAL USES

For use to control diseases on turf and ornamentals on golf courses, lawns and landscape areas around residential, institutional, public, commercial and industrial buildings, parks, recreational areas and athletic fields.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. The area being treated must be vacated by unprotected persons.

Do not treat areas while unprotected humans or domestic animals are present in the treatment areas. Because certain states may require more restrictive reentry intervals, consult your State Department of Agriculture for further information.

Do not allow entry into treatment area until area that was treated with Heritage is dry.

STORAGE AND DISPOSAL

PROHIBITIONS: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Storage

Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, sweep and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

Heritage®

Pesticide Disposal

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

Container Disposal

Triple rinse (or equivalent); then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill or alternatives allowed by State and local authorities.

GENERAL INFORMATION

Heritage is a broad spectrum, preventative fungicide with systemic and curative properties recommended for the control of many important plant diseases. Heritage may be applied as a foliar spray in alternating spray programs or in tankmixes with other registered, turf and ornamental protection products. All applications should be made according to the use directions that follow. See Directions regarding TANKMIXES/COMPATIBILITY.

GENERAL USE PRECAUTIONS

Do not graze or feed clippings from treated turf areas to animals. Crops in this label may be planted immediately after last treatment. Do not plant other crops within 45 days after last application.

ATTENTION

Heritage is extremely phytotoxic to certain apple varieties.

AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to apple trees (and apple fruit).

DO NOT spray Heritage where spray drift may reach apple trees.

DO NOT spray when conditions favor drift beyond area intended for application. Conditions which may contribute to drift include thermal inversion, wind speed and direction, sprayer nozzle/pressure combinations, spray droplet size, etc. Contact your State extension agent for spray drift prevention guidelines in your area.

DO NOT use spray equipment which has been previously used to apply Heritage to spray apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple varieties. Please see Table 5 for list of Intolerant Plants.

AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.

INTEGRATED PEST (DISEASE) MANAGEMENT

Heritage should be integrated into an overall disease and pest management strategy whenever the use of a fungicide is required. Cultural practices known to reduce disease development should be followed. The **SPECIFIC USE DIRECTIONS** section in this label identifies specific IPM recommendations for each crop. Consult your local turf, ornamental or agricultural authority for additional IPM strategies established for your area. Heritage may be used in State Agricultural Extension advisory (disease forecasting) programs which recommend application timing based on environmental factors favorable for disease development.

RESISTANCE MANAGEMENT

A disease management program that includes alternation or tankmixes between Heritage and other labeled fungicides that have a different mode of action is essential to prevent pathogen populations from developing resistance to Heritage. Heritage should not be alternated or tankmixed with fungicides to which resistance has already developed.

Continual use of Heritage may allow less sensitive strains of pathogens to increase in the population and reduce the efficacy of Heritage. Since Heritage is a strobilurin fungicide, avoid alternation with other strobilurins, such as kresoxim-methyl and trifloxystrobin.

Since pathogens differ in their potential to develop resistance to fungicides, the **SPECIFIC USE DIRECTIONS** section in this label provides resistance management strategies specific for each crop and disease. Consult your local or state turf, ornamental or agricultural authority for resistance management strategies that are complementary to those in this label. Heritage is not cross resistant with other classes of fungicides which have different modes of action.

SPRAYING/MIXING

Heritage may be applied with all types of spray equipment commonly used for making ground and aerial applications. Do not apply Heritage through any type of ultra low volume (ULV) spray system (less than 3 gals./A). Proper adjustments and calibration of spraying equipment to give good canopy penetration and coverage is essential for good disease control. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure, highly susceptible varieties, or when disease conducive environmental conditions exist.

For ground applications, apply Heritage in sufficient water volume for adequate coverage and canopy penetration.

To prepare spray solution, partially fill the spray tank with clean water and begin agitation. Add the specified amount of Heritage to the tank, allowing time for good dispersion, then add an adjuvant, if recommended. If tankmixes are required, product should be added to the spray tank in the following order: Heritage, other WG or dry flowable formulations, wettable powders and flowable (aqueous suspensions) products. Finish filling the tank to the desired volume to obtain the proper spray concentration. Maintain agitation throughout the spraying operation. Do not allow spray mixture to stand overnight or for prolonged periods. Make up only the amount of spray required for immediate use. Sprayers should be thoroughly cleaned immediately after application. Do not use silicone based products with Heritage due to possible phytotoxicity.

SPRAY DRIFT MANAGEMENT

ATTENTION

Heritage is extremely phytotoxic to certain apple varieties.

AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to apple trees (and apple fruit).

DO NOT spray Heritage where spray drift may reach apple trees.

DO NOT spray when conditions favor drift beyond area intended for application. Conditions which may contribute to drift include thermal inversion, wind speed and direction, sprayer nozzle/pressure combinations, spray droplet size, etc. Contact your State extension agent for spray drift prevention guidelines in your area.

DO NOT use spray equipment which has been previously used to apply Heritage to spray apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple varieties. Please see Table 5 for list of Intolerant Plants.

AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.

Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat.

Directions for Use Through Sprinkler and Drip Irrigation Systems:

Spray Preparation: Chemical tank and injector system should be thoroughly cleaned. Flush system with clean water.

APPLICATION INSTRUCTIONS

Apply Heritage at rates and timings as described in this label.

Use Precautions for Sprinkler and Drip Irrigation Applications:

Drip Irrigation: Heritage may be applied through drip irrigation systems to potted ornamentals or to bedded, field grown ornamentals for soil-borne disease control. Apply 2-16 oz. Heritage per acre as a preventative disease application. The soil or potting media should have adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) should be delayed for at least 24 hours following drip application.

Sprinkler Irrigation: Apply this product through sprinkler irrigation systems including center pivot, lateral move, end tow, side [wheel] roll, traveler, big gun, solid set, or hand move irrigation systems. Do not apply this product through any other type of irrigation system except as specified on this label.

Apply with center pivot or continuous-move equipment distributing 1/2 acre-inch or less during treatment. In general, use the least amount of water required for proper distribution and coverage. If stationary systems (solid set, handlines or wheel lines other than continuous-move) are used, this product should be injected into no more than the last 20-30 minutes of the set. Do not apply when winds are greater than 10-15 mph to avoid drift or wind skips. Do not apply when wind speed favors drift beyond the area intended for treatment. Plant injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform treated water. Thorough coverage of foliage is required for good control. Good agitation should be maintained during the entire application period.

If you have questions about calibration you should contact a State Extension Service specialist, equipment manufacturers or other experts.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

Heritage®

Specific Instructions for Public Water Systems:

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, back-flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended for treatment.

TANKMIXES/COMPATIBILITY

Heritage is compatible with many commonly used fungicides, liquid fertilizers, herbicides, insecticides and biological control products. If tankmixes are desired, observe all directions, precautions, and limitations on labeling of all products used. Consult compatibility charts or your local or state turf, ornamental or agricultural authority for compatibility information. Do not combine Heritage in the spray tank with pesticides, surfactants, or fertilizers, unless compatibility charts or your own prior use has shown that the combination is physically compatible, effective, and non-injurious under your conditions of use. If physical compatibility is unknown, the following procedure should be followed: Pour the recommended proportions of the products into a suitable container of water, mix thoroughly and allow to stand at least twenty (20) minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. If tankmixes are required, product should be added to the spray tank in the following order: Heritage, other WG or dry flowable formulations, wettable powders and flowable (aqueous suspensions) products.

SPECIFIC USE DIRECTIONS

TURF

Heritage is recommended for control of certain pathogens causing foliar, stem, and root diseases, including leaf and stem blights, leaf spots, patch diseases, mildews, anthracnose, fairy rings, molds, and rusts of turfgrass plants. Heritage may be used to control certain diseases on golf courses, lawns and landscape areas around residential, institutional, public, commercial and industrial buildings, parks, recreational areas and athletic fields.

Integrated Pest (Disease) Management (IPM): Sound turf management resulting in healthy, vigorous turf is the foundation of a good IPM program. Cultural practices such as proper choice of turf variety, nutrient management, proper cutting height, thatch management, and proper watering, drainage, and moisture stress management should be integrated with the use of fungicides to increase turf vigor and reduce the susceptibility to disease. Immunoassay detection kits and extension service diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

Resistance Management: Some turf disease pathogens are known to have developed resistance to products used repeatedly for their control. Heritage should be applied at full use rates in a tankmix or alternation program with other registered fungicides that have a different mode of action and to which pathogen resistance has not developed. Since Heritage is a strobilurin fungicide, avoid alternation with other strobilurins, such as kresoxim-methyl and trifloxystrobin. Do not apply more than two sequential Heritage applications for Gray Leaf Spot and *Pythium* spp. control. For all other diseases when Gray Leaf Spot and *Pythium* spp. are not present, do not apply more than three sequential applications of Heritage.

Application Directions: *Heritage should be applied prior to disease development.* Mix Heritage with the required amount of water and apply as a dilute spray application in 2-4 gals. of water per 1000 sq. ft. (87-174 gals./A). Repeat applications at specified intervals for as long as required. For spot treatments, use 0.2 oz. Heritage per 1 to 2 gals. of water. Do not apply more than 10 lbs. product/acre/year (3.7 oz. product/1000 sq. ft./year). Applications may be made by ground only.

For use with soil injection applications:

Heritage may be applied through a liquid fungicide injector for the control of ectrotrophic root diseases such as summer patch and take-all patch. Use Heritage only in liquid injection equipment specifically designated for pesticide use.

Heritage®

Apply Heritage at 0.2 to 0.4 oz. per 1000 sq. ft. Spray carrier volume should fall within 30-150 gals. of water per 1000 sq. ft. Injection hole spacing of 1 inch by 1 inch is recommended for optimum control. Injection depth should be no greater than 2 inches. One inch depth is recommended for optimum results. Application timing should follow disease control strategies used for normal broadcast spray programs.

For use in the establishment of turfgrass from seed or in overseeding of dormant turfgrass:

Heritage may be used for control of certain turfgrass diseases associated with turfgrass establishment from seed. Heritage may also be used during overseeding of dormant turfgrass.

Heritage may be safely applied before or after seeding or at seedling germination and emergence to ryegrass, bentgrass, bluegrass, and fescue turfgrass types. Optimum application timing is during seeding. See **Application Directions** section.

Rate Ranges: Use the shorter specified application interval and/or use the higher specified rate when prolonged favorable disease conditions exist.

Dollar Spot: Heritage does not control dollar spot. During periods of dollar spot pressure, always mix Heritage with Daconil® or another dollar spot control fungicide. Heritage is compatible in tankmixes with many other fungicides that control dollar spot. Follow directions under **TANKMIXES/COMPATIBILITY**.

DIRECTIONS FOR APPLICATION FOR TURF DISEASES

Target Diseases	Use Rate (oz. product per 1000 sq. ft.)	Application Interval (days)	Remarks*
Anthraxnose (<i>Colletotrichum graminicola</i>)	0.2-0.4	14-28	Use preventatively. Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Brown Patch (<i>Rhizoctonia solani</i>)	0.2-0.4	14-28	Apply when conditions are favorable for disease development.
Cool Weather Brown Patch Yellow Patch (<i>Rhizoctonia cerealis</i>)	0.4	28	Make one or two applications in fall or when conditions are favorable for disease development.
Fairy Ring (<i>Lycoperdon</i> spp., <i>Agrocybe pediades</i> , and <i>Bovistia plumbea</i>)	0.4	28	Apply as soon as possible after fairy ring symptoms develop. Apply only in 4 gals. water per 1000 sq. ft. (174 gals./A). Add the recommended rate of a wetting agent to the final spray. Severely damaged or thin turf may require reseeding. Fairy ring symptoms may take 2 to 3 weeks to disappear following application. Reapplication after 28 days may be required in some cases.
Fusarium Patch (<i>Microdochium nivale</i>)	0.2-0.4	14-28	Use preventatively. Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Gray Leaf Spot (<i>Pyricularia grisea</i>)	0.2-0.4	14-28	Begin applications before disease is present and continue applications while conditions are favorable for disease development.
Gray Snow Mold Typhula Blight (<i>Typhula incarnata</i>)	0.7 0.4	single application 10-28	Make a single application of 0.7 oz. or two applications of 0.4 oz. spaced 10-28 days apart in late fall just before snow cover. Tankmixing with another snow mold fungicide, such as Daconil, may enhance control under severe disease pressure.
Leaf Rust Stem Rust Stripe Rust (<i>Puccinia</i> spp.)	0.2-0.4	14-28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Leaf Spot (<i>Bipolaris sorokiniana</i>)	0.2-0.4	14-21	Apply when conditions are favorable for disease development.

continued...

Heritage®

Target Diseases	Use Rate (oz. product per 1000 sq. ft.)	Application Interval (days)	Remarks*
Melting Out (<i>Drechslera poae</i>)	0.2-0.4	14-21	Apply when conditions are favorable for disease development.
Necrotic Ring Spot (<i>Leptosphaeria korrae</i>)	0.4	14-28	Apply when conditions are favorable for disease development.
Pink Patch (<i>Limonomyses roseipellis</i>)	0.2-0.4	14-28	Apply when conditions are favorable for disease development.
Pink Snow Mold (<i>Microdochium nivale</i>)	0.7 0.4	single application 10-28	Make a single application of 0.7 oz. or two applications of 0.4 oz. spaced 10-28 days apart in late fall just before snow cover. Tankmixing with another snow mold fungicide, such as Daconil may enhance control under severe disease pressure.
Powdery Mildew (<i>Erysiphe graminis</i>)	0.2-0.4	14-28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Pythium Blight Pythium Root Rot (<i>Pythium aphanidermatum</i> , <i>Pythium</i> spp.)	0.4	10-14	Use preventatively. Begin applications when conditions are favorable for disease infection, prior to disease symptom development. During periods of prolonged favorable conditions, treat on the 10 day application interval. For use on newly seeded as well as established turf.
Red Thread (<i>Laetisaria fuciformis</i>)	0.2-0.4	14-28	Apply when conditions are favorable for disease development.
Rhizoctonia Large Patch (<i>Rhizoctonia solani</i>)	0.4	14-28	Make one or two applications in fall or when conditions are favorable for disease development.
Rhizoctonia Leaf Spot (<i>Rhizoctonia zeae</i>)	0.4	14-28	Apply when disease conditions are favorable for disease development.
Southern Blight (<i>Sclerotium rolfsii</i>)	0.2-0.4	14-28	Apply when conditions are favorable for disease development.
Spring Dead Spot (<i>Leptosphaeria korrae</i>) or (<i>Gaeumannomyces graminis</i> var. <i>graminis</i>) or (<i>Ophiosphaerella herpotricha</i>)	0.4	14-28	Apply 1 or 2 applications approximately one month prior to bermudagrass dormancy. 1/4" to 1/2" of irrigation directly after application is recommended. Reapply 14 to 28 days later.
Summer Patch (<i>Magnaporthe poae</i>)	0.2-0.4	14-28	Apply when conditions are favorable for disease development.
Take-all Patch (<i>Gaeumannomyces graminis</i> var. <i>avenae</i>)	0.4	28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development. Make two applications, 28 days apart in the spring and two applications 28 days apart in the fall.
Zoysia Patch (<i>Rhizoctonia solani</i> and/or <i>Gaeumannomyces incrustana</i>)	0.4	14-28	Apply 1 or 2 applications approximately one month prior to zoysiagrass dormancy. Reapply 14 to 28 days later.

*Do not apply more than two sequential applications of Heritage for control of Gray Leaf Spot and *Pythium* spp. For all other diseases when Gray Leaf Spot and *Pythium* spp. are not present, do not apply more than three sequential applications of Heritage.

0.2 oz.	10.0 oz.	6.7 oz.	5.0 oz.
0.4 oz.	20.0 oz.	13.3 oz.	10.0 oz.
0.7 oz.	35.0 oz.	23.3 oz.	17.5 oz.

ORNAMENTALS

Heritage is recommended for control of certain pathogens causing foliar, aerial, and root diseases, including leaf, tip, and flower blights, leaf spots, mildews, anthracnose, and rusts of ornamental plants. Heritage may be used to control certain diseases of container, bench, flat, plug, bed or field-grown ornamentals in greenhouses, shade-houses, outdoor nurseries, retail nurseries, and other residential and commercial landscape areas.

Integrated Pest (Disease) Management (IPM): Heritage should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, optimum plant populations, proper fertilization, winter and/or spring pruning, plant residue management, and proper timing and placement of irrigation. Immunoassay detection kits and diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

Resistance Management: Some ornamental disease pathogens are known to have developed resistance to fungicides used repeatedly for their control. Heritage should be applied in an alternation or tankmix program with other registered fungicides that have a different mode of action and to which pathogen resistance has not developed. Do not make more than three (3) sequential applications of Heritage before alternating with a fungicide of a different mode of action. A sound resistance management program would include blocks of three Heritage applications separated by blocks of two alternate fungicide applications. Do not alternate Heritage with other strobilurin fungicides.

Application Directions: Apply Heritage as a broadcast or banded spray targeted at the foliage or crown of the plant. Apply to runoff in sufficient water to ensure complete coverage of the target plant. Good coverage and wetting of foliage is necessary for best control. Refer to the label for specific use directions for control of certain diseases. Repeat applications at specified intervals (plus alternations for resistance management) for as long as required. Applications may be made by ground only.

Heritage applications should begin prior to disease development and continue throughout the season at specified intervals following resistance management guidelines. Heritage works best when used as part of a preventative disease management program.

Use only surfactants approved for ornamental plants in combination with Heritage. Do not use silicone based products with Heritage due to possible phytotoxicity. Always test tankmixes on a small group of representative plants prior to broadcast use.

Apply Heritage at use rates of 1-4 oz./100 gals. and every 7-28 days (or as otherwise specified for a specific plant or disease). The addition of a non-silicone based wetter-sticker at the recommended use rate may enhance coverage on hard-to-wet plant foliage.

Under most conditions and for most diseases, apply 2-4 oz./100 gals. on a 7-14 day interval.

Under light to moderate disease pressure, use the lower rates (1-2 oz./100 gals.) on a 7-14 day interval or the higher rates (3-4 oz./100 gals.) on a 14-28 day interval.

Under environmental conditions which promote severe disease development, use the higher rates (3-4 oz./100 gals.) on a 7-14 day interval.

Use of Heritage as a "rescue" (late curative or eradicator) treatment may not always result in satisfactory disease control.

Do not exceed 10 lbs. product/crop acre/year or 8 applications/crop/year.

Do not exceed 600 gals. spray volume per acre for foliar applications. For drench and crown applications, do not exceed 2 pts. volume per sq. ft.

In addition, do not tankmix Heritage with other fungicides, insecticides, herbicides, fertilizers, adjuvants, etc., unless local experience indicates that the tankmix is safe to ornamental plants.

Drench Application: Heritage may be applied to control soilborne, seedling, and crown diseases of production ornamentals (greenhouse, shadehouse, and container grown) as a preventative, drench treatment prior to infection. Good coverage of the pre-infection area (root zone, root ball, crown, etc.) is necessary for satisfactory control. Heritage may be drench applied to container grown ornamentals using 0.2-0.9 oz./100 gals. of water. Apply 1-2 pts. of the solution per sq. ft. surface area on a 7-28 day interval. Apply drench prior to infection as healthy roots are necessary to optimize product uptake, systemic translocation and disease protection.

Heritage®

For resistance management do not make more than three sequential drench applications of Heritage before alternating with a fungicide of a different mode of action.

Caution should be taken before making application of Heritage as a drench to small bedding plants in the seedling/plug stage due to possible phytotoxicity. A limited quantity of plants should be tested prior to full-scale application.

Drip Irrigation: Heritage may be applied through drip irrigation systems to potted ornamentals or to bedded, field grown ornamentals for soil-borne disease control. Apply 2-16 oz. Heritage per acre as a preventative disease application. The soil or potting media should have adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) should be delayed for at least 24 hours following drip application.

General Ornamental Use Precautions

Do not apply Heritage to apple or cherry trees (Flowering, Yoshina variety) due to possible phytotoxicity. Further, do not use spray equipment that has applied Heritage for use in these sensitive crops due to possible phytotoxicity from residue remaining in the sprayer.

Heritage may be applied to certain varieties of crabapple for control of apple scab. Heritage has been shown to be safer when applied to the species and varieties listed in Table 4. However, due to the large number of genera, species, and varieties of crabapple, it is impossible to test every one for tolerance to Heritage. The professional user should conduct small scale testing to insure plant safety prior to broadscale commercial use on plant genera and species not listed on this label.

TABLE 1
Diseases Controlled

When used in accordance with the label directions, Heritage will provide control of the following diseases of ornamental plants:

DISEASE (Pathogen)	SPECIAL USE COMMENTS
1. CONIFER BLIGHTS	
a. Phomopsis Blight (<i>Phomopsis juniperovora</i>)	Apply 1-4 oz./100 gal. every 7-28 days.
b. Tip Blight (<i>Sirococcus strobilinus</i>)	Apply 1-4 oz./100 gal. every 7-28 days.
2. LEAF BLIGHTS/LEAF SPOTS	
a. Alternaria Leaf Spot (<i>Alternaria</i> spp.)	Apply 1-4 oz./100 gal. every 7-28 days.
b. Anthracnose (<i>Colletotrichum</i> spp., <i>Elsinoe</i> spp.)	Apply 4-8 oz./100 gal. every 7-28 days.
c. Cercospora Leaf Spot (<i>Cercospora</i> spp.)	Apply 1-4 oz./100 gal. every 7-28 days.
d. Downy Mildew of Bedding Plants (<i>Peronospora</i> spp.)	Apply 1-2 oz. every 7-14 days prior to infection. Do not apply the 2 oz. rate on less than 14 day spray intervals.
e. Downy Mildew of Rose (<i>Peronospora sparsa</i>)	Apply 2-4 oz./100 gal. every 7-21 days during periods of active plant growth and prior to dormancy or severe infection.
f. Entomosporium Leaf Spot (<i>Entomosporium mespili</i>)	Apply 1-4 oz./100 gal. every 7-28 days.
g. Iris Leaf Spot (<i>Mycosphaerella macrospora</i>)	Apply 2-4 oz./100 gal. every 7-21 days.
h. Leaf Spot (<i>Cladosporium echinulatum</i>)	Apply 1-4 oz./100 gal. every 7-28 days.
i. Marrsonina Leaf Spot (<i>Marrsonina</i> spp.)	Apply 1-4 oz./100 gal. every 14-28 days.
j. Myrothecium Leaf Spot (<i>Myrothecium rordum</i>)	Apply 1-4 oz./100 gal. every 7-21 days.
k. Scab (<i>Venturia inaequalis</i>)	Apply 1-4 oz./100 gal. every 10-28 days. Do not apply to apple trees. For crabapples only, see Table 4 for tolerant species.
l. Septoria Leaf Spot (<i>Septoria rosea</i>)	Apply 2-4 oz./100 gal. every 7-28 days.
3. POWDERY MILDEW	Preventative applications only. Do not make more than 2 sequential applications before rotating to another class of fungicide.
a. <i>Erysiphe pannosa</i> , <i>Erysiphe</i> spp.	Apply 1-4 oz./100 gal. every 7-28 days.
b. <i>Microsphaera azaleae</i>	Apply 1-4 oz./100 gal. every 7-28 days.
c. <i>Sphaerotheca pannosa</i>	Apply 1-4 oz./100 gal. every 7-28 days.

Heritage®

DISEASE (Pathogen)	SPECIAL USE COMMENTS
4. RUSTS	
a. Needle Rust (<i>Melampsora occidentalis</i>)	Apply 1-4 oz./100 gal. every 7-28 days.
b. <i>Phragmidium</i> spp.	Apply 1-4 oz./100 gal. every 7-28 days.
c. <i>Puccinia</i> spp.	Apply 1-4 oz./100 gal. every 7-28 days.
d. <i>Gymnosporangium</i> spp.	Apply 1-4 oz./100 gal. every 7-28 days.
5. FLOWER BLIGHTS	
a. Anthracnose (<i>Collectotrichum</i> spp., <i>Elsinoe</i> spp.)	Apply 1-4 oz./100 gal. every 7-28 days.
b. Botrytis Blight (<i>Botrytis cinerea</i>)	Apply 4-8 oz./100 gal. every 7-21 days prior to infection.
6. SHOOT/STEM DISEASES	
a. Aerial/Shoot Blight (<i>Phytophthora</i> spp.)	Apply 1-2 oz./100 gal. every 7-28 days.
7. SOILBORNE DISEASES (Directed Spray)	For directed spray applications utilize the following rates below.
a. <i>Rhizoctonia solani</i>	Apply 1-4 oz./100 gal. every 7-21 days.
b. <i>Sclerotium rolfsii</i>	Apply 1-4 oz./100 gal. every 7-21 days.
c. <i>Fusarium</i> spp.	Apply 1-4 oz./100 gal. every 7-21 days.
8. SOILBORNE DISEASES (Drench)	See Ornamentals Section for additional drench directions.
a. <i>Rhizoctonia solani</i>	Apply 0.2-0.9 oz./100 gal., 1-2 pts. of the solution per sq. ft. surface area, every 7-28 days.
b. <i>Sclerotium rolfsii</i>	Apply 0.2-0.9 oz./100 gal., 1-2 pts. of the solution per sq. ft. surface area, every 7-28 days.
c. <i>Fusarium</i> spp.	Apply 0.2-0.9 oz./100 gal., 1-2 pts. of the solution per sq. ft. surface area, every 7-28 days.

PLANT SAFETY: Heritage has been shown to be safe when applied to the ornamental plants listed in Tables 2, 3 and 4. However, due to the large number of genera, species and varieties of ornamental and nursery plants, it is impossible to test every one for tolerance to Heritage. Neither the manufacturer nor the seller has determined whether or not Heritage can be used safely on genera, species, or varieties of ornamental and nursery plants not specified on this label. The professional user should conduct small scale testing to insure plant safety prior to broadscale commercial use on plant genera and species not listed in this label.

In addition, do not tankmix Heritage with other fungicides, insecticides, herbicides, fertilizers, adjuvants, etc, unless local experience indicates that the tankmix is safe to ornamental plants.

Do not apply Heritage to certain apple, crabapple, or cherry trees due to possible phytotoxicity. Further, do not use spray equipment that has applied Heritage for use in these sensitive crops due to possible phytotoxicity from residue remaining in the sprayer.

Tolerant Ornamental Plants: Heritage has been found to be safe when applied to the plants listed in Tables 2, 3 and 4 when applied according to recommended application methods, rates, and timings.

Heritage®

CONIFERS INCLUDING CHRISTMAS TREES, COMMERCIAL PRODUCTION ROSES

Heritage may be used to control certain diseases on conifers in production (indoor and outdoor) and landscape situations.

Please see the Ornamentals section above for more detailed directions for use in landscape situations.

DIRECTIONS FOR APPLICATION

Crop	Target Diseases	Use Rate oz. product/A (lbs. a.i./A)	Remarks
Conifers Including Christmas Trees	Diplodia Tip Blight (<i>Diplodia pinea</i>) Lophodermium Needlecast (<i>Lophodermium pinastri</i>) Swiss Needlecast (<i>Phaeocryptopus gaumannii</i>)	3.2-8.0 (0.10-0.25)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance and removal of plant debris in which inoculum may overwinter.</p> <p>Resistance Management: Do not apply more than four sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. Do not make more than eight applications of Heritage per acre per year.</p> <p>Application Directions: Heritage applications should begin prior to disease development and continue throughout the season at 7-21 day intervals following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at recommended rates to improve coverage.</p> <p>Do not apply more than 4.0 lbs. of product/acre/season (2.0 lbs. a.i./A).</p>
Roses (Commercial Rose Production)	Downy Mildew (<i>Peronospora sparsa</i>) Powdery Mildew (<i>Sphaerotheca pannosa</i>) Rust (<i>Phragmidium mucronatum</i> , <i>P. tuberculatum</i> , and other <i>Phragmidium</i> spp.) Septoria Leaf Spot (<i>Septoria rosea</i>) Alternaria Leaf Spot (<i>Alternaria alternata</i>)	1.6-8.0 (0.05-0.25)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, optimum plant populations, proper fertilization, winter and/or spring pruning, plant residue management, and proper timing and placement of irrigation.</p> <p>Resistance Management: Do not make more than four sequential applications of Heritage before alternating with a fungicide that has a different mode of action. Do not make more than eight applications per acre per year.</p> <p>Application Directions: Heritage applications should begin prior to disease development and continue throughout the season on 7-21 day intervals following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at recommended rates to improve coverage.</p> <p>Plant Safety: Heritage has been shown to be safe when applied to roses. However, all varieties of roses have not been evaluated for safety. Small scale variety safety testing must be conducted to insure plant safety prior to large scale application. In addition, do not tankmix Heritage with other fungicides, insecticides, herbicides, fertilizer, etc. unless local experience indicates that the tankmix is safe to roses.</p> <p>Do not apply more than 4.0 lbs. of product/acre/season (2.0 lbs. a.i./A).</p>

Heritage®

NURSERIES, GARDENS AND LANDSCAPES

Heritage may be applied to plants used for food in production nurseries, gardens and landscapes to control certain diseases. Follow the pre-harvest interval following applications prior to consuming fruits, nuts, or other produce from those treated areas.

Crop	Target Diseases	Use Rate oz. product/A (lbs. a.i./A)	Remarks
Almonds	<p>Alternaria Leaf and Fruit Spot (<i>Alternaria alternata</i>)</p> <p>Anthrachnose (<i>Colletotrichum acutatum</i>)</p> <p>Brown Rot Blossom Blight (<i>Monilinia laxa</i>, <i>M. fructicola</i>)</p> <p>Leaf Blight (<i>Seimatosporium lichenicola</i>)</p> <p>Leaf Rust (<i>Tranzschelia discolor</i>)</p> <p>Scab (<i>Cladosporium carpophilum</i>)</p> <p>Shothole (<i>Wilsonomyces carpophilus</i>)</p>	3.2-8.0 (0.10-0.25)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters and proper timing and placement of irrigation.</p> <p>Resistance Management: For blossom blight do not apply more than two sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. For all other almond diseases do not apply more than four sequential sprays of Heritage before alternation with a fungicide that has a different mode of action. Do not make more than six applications of Heritage per acre per year.</p> <p>Application Directions: Heritage applications should begin prior to disease development and continue throughout the season following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant may be added at recommended rates to improve coverage.</p> <p>For blossom blight begin applications at early bloom and continue through petal fall. For anthracnose, scab and shothole begin applications prior to disease development and continue at 10-14 day intervals throughout the season.</p> <p>Do not apply more than 3.0 lbs. of product/acre/season (1.5 lbs. a.i./A).</p> <p>Do not apply within 28 days of harvest.</p>
Bananas Plantains	<p>Black Sigatoka (<i>Mycosphaerella fijiensis</i>)</p> <p>Yellow Sigatoka (<i>Mycosphaerella musicola</i>)</p>	2.9-4.3 (0.09-0.135)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes canopy management through removal of suckers, proper plant spacing, selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters, and good surface water drainage.</p> <p>Resistance Management: Do not apply more than two sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. Do not make more than eight applications of Heritage per acre per year.</p> <p>Application Directions: Heritage applications should begin prior to disease development and continue throughout the season every 12-14 days following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant may be added at recommended rates to improve coverage.</p> <p>Do not apply more than 2.16 lbs. of product/acre/season (1.08 lbs. a.i./A).</p> <p>May be applied the day of harvest.</p>
Berries, Bushberry subgroup Blueberry Currant Elderberry Gooseberry Huckleberry Lingonberry Junberry Salal	<p>Botryosphaeria Canker (<i>Botryosphaeria</i> spp.)</p> <p>Powdery Mildew (<i>Sphaerotheca</i> spp.)</p> <p>Septoria Blight (<i>Septoria</i> spp.)</p>	3.2-8.0 (0.10-0.25)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes varieties with disease tolerance, proper timing of irrigation and removal of plant debris in which inoculum overwinters.</p> <p>Resistance Management: Do not apply more than two sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. Do not make more than three applications of Heritage per acre per crop year.</p> <p>Application Directions: Heritage applications should begin prior to disease development and continue throughout the season on a 7-14 day schedule, following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant may be added at recommended rates.</p> <p>Do not apply more than 1.5 lbs. (0.75 lb. active ingredient) per acre per season.</p> <p>May be applied the day of harvest.</p>

Heritage®

Potatoes	<p>Early Blight (<i>Alternaria solani</i>)</p> <p>Late Blight (<i>Phytophthora infestans</i>)</p> <p>Black Dot (<i>Colletotrichum coccodes</i>)</p> <p>Powdery Mildew (<i>Erysiphe cichoracearum</i>)</p>	3.2-9.6 (0.10-0.33)	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes removal of plant debris, in which inoculum overwinters, selection of varieties with tolerance to disease, clean certified seed, seedpiece treatment, and disease forecasting.</p> <p>Resistance Management: Do not make more than one application of Heritage before alternation with fungicides that have a different mode of action, such as Bravo®. Make applications on a 5-7 day schedule. Do not alternate or tankmix with fungicides to which resistance has developed. Do not make more than six applications per year.</p> <p>Application Directions: For both early and late blight, maintain the alternation program described above.</p> <p>Early blight - For a 7-day application schedule use Heritage 3.2 oz. product/A, if the interval is increased to 14 days use the 6.0 oz. product/A rate.</p> <p>Late blight - Apply Heritage at 3.2 oz. product/A on a 7 day schedule. Initiate late blight applications in a preventative schedule prior to disease development according to local practices. If late blight symptoms develop or conditions favor disease increase the Heritage rate to 6.0 to 8.0 oz. product/A and use a 5-day schedule. For all other diseases, Heritage applications should begin prior to disease development and continue throughout the season every 7-14 days following the resistance management guidelines. Applications may be made by ground, air, or chemigation. Addition of a spreader/sticker may improve coverage. Do not make more than six applications of Heritage per acre per year for all diseases.</p> <p>Do not apply more than 4.0 lbs. of product/acre/season (2.0 lbs. a.i./A).</p> <p>Do not apply within 14 days of harvest.</p>
<p>Stone Fruit</p> <p>Apricot</p> <p>Cherry, sweet</p> <p>Cherry, tart</p> <p>Nectarine</p> <p>Peach</p> <p>Plum</p> <p>Plumcot</p> <p>Prune</p>	<p>Scab (<i>Cladosporium carpophilum</i>)</p> <p>Alternaria Spot and Fruit Rot (<i>Alternaria alternata</i>)</p> <p>Anthrachnose (<i>Colletotrichum pruicola</i>, <i>C. gloeosporioides</i>)</p> <p>Leaf Rust (<i>Tranzschelia discolor</i>)</p> <p>Powdery Mildew (<i>Sphaerotheca parnosa</i>, <i>Podosphaera clandestina</i>)</p> <p>Shothole (<i>Wilsonomyces carpophilus</i>)</p> <p>Brown Rot Blossom Blight and Fruit Rot (<i>Monilinia fruticola</i>, <i>M. laxa</i>)</p>	<p>3.2-8.0 (0.10-0.25)</p> <p>6.4-8.0 (0.20-0.25)</p>	<p>Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters and pruning to provide sunlight and aeration into the canopy.</p> <p>Resistance Management: For blossom blight do not apply more than two sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. For all other diseases do not apply more than four sequential sprays of Heritage before alternation with a fungicide that has a different mode of action. Do not alternate or tankmix with fungicides to which resistance has developed in the pathogen population. Do not make more than six applications of Heritage per acre per year for all diseases. Do not make more than four applications of Heritage per acre per year at 8 oz. product/A (0.25 lb. a.i./A).</p> <p>Application Directions: For brown rot blossom blight begin applications at early bloom and continue through petal fall. Do not apply more than two applications of Heritage before alternating with fungicides that have a different mode of action. For brown rot on fruit, Heritage may be applied to fruit up to the day of harvest. Do not apply more than two applications before alternating with fungicides that have a different mode of action. For scab, begin applications at petal fall and continue at 7-14 day intervals. For all other diseases, begin application at the onset of disease as a protectant fungicide and continue on a 7-14 day schedule. For peaches only, 4.7-8.0 oz. of Heritage may be used for scab control.</p> <p>Do not apply more than 2.4 lbs. of product/acre/season (1.2 lbs. a.i./A).</p> <p>May be applied the day of harvest.</p>

Heritage®

Crop	Target Diseases	Use Rate oz. product/A (lbs. a.i./A)	Remarks
Strawberry	Anthrachnose <i>(Colletotrichum fragariae)</i> Powdery Mildew <i>(Sphaerotheca macularis)</i>	3.2-8.0 (0.10-0.25)	Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes varieties with disease tolerance, proper timing of irrigation and removal of plant debris in which inoculum overwinters. Resistance Management: Do not apply more than two sequential sprays of Heritage before alternating with a fungicide that has a different mode of action. Do not make more than four applications of Heritage per acre per crop year. Application Directions: Heritage applications should begin prior to disease development and continue throughout the season on a 7-10 day schedule, following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant may be added at recommended rates. Do not apply more than 2.0 lbs. (1.0 lb. active ingredient per acre per season). May be applied the day of harvest.
Tomatoes	Anthrachnose <i>(Colletotrichum coccodes)</i> Black Mold <i>(Alternaria alternata)</i> Buckeye Rot <i>(Phytophthora spp.)</i> Early Blight <i>(Alternaria solani)</i> Powdery Mildew <i>(Oidiopsis sicula)</i> Septoria Leaf Spot <i>(Septoria lycopersici)</i> Target Spot <i>(Corynespora cassicola)</i> Late Blight <i>(Phytophthora infestans)</i>	0.8-3.2 (0.025-0.10) 1.6-3.2 (0.05-0.10)	Integrated Pest (Disease) Management: Heritage should be integrated into an overall disease management strategy that includes proper selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters, plant residue management, crop rotation and proper timing and placement of irrigation. Resistance Management: When Heritage is being applied for the control of early blight, Septoria leaf spot and/or anthracnose, no more than four sequential applications of Heritage should be made before alternating with a fungicide with a different mode of action. When Heritage is being applied for the control of late blight, no more than two sequential applications of Heritage should be made before alternation with a fungicide with a different mode of action. If late blight should occur during an early blight spray program, switch immediately to the late blight spray program beginning with a fungicide that has a different mode of action. Do not make more than eight applications per acre per year. Application Directions: Heritage applications should begin prior to disease development and continue throughout the season following the resistance management guidelines. For late blight, Heritage should be applied at 5-7 day intervals. Do not make more than one application of Heritage before alternating with fungicides that have a different mode of action. For all other tomato diseases Heritage should be applied on 7-21 day intervals. Applications may be made by ground, air, or chemigation. Heritage should not be applied until 21 days after transplanting or 35 days after seeding. Heritage should not be applied within +/-6 days of a postemergence broadcast application of Sencor®. Do not apply with an adjuvant due to the potential for phytotoxicity. Do not apply more than 1.6 lbs. of product/acre/season (0.8 lb. a.i./A). May be applied the day of harvest.

Fungicide

Broad spectrum fungicide for control of plant diseases

Active Ingredient:

Azoxystrobin: methyl (E)-2-[2-[6-(2-cyanophenoxy)
pyrimidin-4-yloxy]phenyl]-3-methoxyacrylate* . . . 50.0%

Other Ingredients: . . . 50.0%

Total: . . . 100.0%

Contains 0.5 lb. a.i./lb. product

*IUPAC

EPA Reg. No. 100-1093

EPA Est. 67545-AZ-1YGM EPA Est. 100-NE-001^{NEA}

(Superscript is first three letters of batch code on container)

1 pound

Net Weight

KEEP OUT OF REACH OF CHILDREN.

CAUTION

See directions for use in attached booklet.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. Refer to supplemental labeling under "Agricultural Use Requirements" in the Directions for Use section for information about this standard.

Reformulation is prohibited. See individual container labels for repackaging limitations.

FIRST AID

If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

HOT LINE NUMBER: For 24 Hour Medical Emergency Assistance (Human or Animal) or Chemical Emergency Assistance (Spill, Leak, Fire, or Accident), Call 1-800-888-6372.

Precautionary Statements

Hazards to Humans and Domestic Animals

CAUTION

HARMFUL IF ABSORBED THROUGH SKIN. CAUSES MODERATE EYE IRRITATION. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling.

Environmental Hazards

The active ingredient, azoxystrobin, in this product can be persistent for several months or longer. Azoxystrobin has degradation products which have properties similar to chemicals which are known to leach through soil to groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

This pesticide is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Do not apply directly to water except as specified on this label. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Notify state and/or federal authorities and Syngenta immediately if you observe any adverse environmental effects due to use of this product.

Chemigation

Refer to supplemental labeling in attached booklet for use directions for chemigation. Do not apply this product through any irrigation system, unless the supplemental labeling on chemigation is followed.

(If you do not understand the label, find someone to explain it to you in detail.)

PRECAUTIONARY STATEMENTS

HAZARD TO HUMANS AND DOMESTIC ANIMALS

Causes Moderate Eye Irritation • Harmful if Absorbed Through Skin
Avoid contact with skin, eyes, or clothing.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

WPS Uses: Applicators and other handlers who handle this pesticide for any use covered by Worker Protection Standard (40 CFR part 170) – in general, agricultural plant uses are covered – must wear:

- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standards (WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)], the handlers PPE requirements may be reduced or modified as specified in the WPS.

Non-WPS Uses: Applicators and other handlers who handle this pesticide for any use NOT covered by the Worker Protection Standard (40 CFR part 170) – in general, only agricultural plant uses are covered by the WPS – must wear:

- Shirt and pants
- Gloves
- Shoes plus socks

User Safety Recommendations

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

First Aid

If in Eyes:	<ul style="list-style-type: none">• Hold eye open and rinse slowly and gently with water for 15-20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.• Call a poison control center or doctor for treatment advice.
If on skin or clothing:	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15-20 minutes.• Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may contact 1-800-424-9300 for emergency medical treatment information.

ENVIRONMENTAL HAZARDS

For terrestrial uses, do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters.

This chemical has the properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

DIRECTIONS FOR USE

Store in a Dry Place.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying. Do not apply this product in a way that will contact workers or other persons either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

GENERAL INFORMATION

MACH 2 1.33% Plus Fertilizer specialty insecticide can be used as directed on any turfgrass site (lawns, sod, turf areas). Examples of such sites include, but are not limited to: residential and commercial lawns, grounds or lawns around business and office complexes, shopping centers, multi-family and residential apartment complexes, airports, military and other institutions, cemeteries, parks and picnic areas, playgrounds, schools, athletic fields, golf courses and sod farms. MACH 2 1.33% Plus Fertilizer mimics the action of a natural insect hormone that induces the molting and metamorphosis process in insects. MACH 2 1.33% Plus Fertilizer is highly active against grubs and lepidopterous larvae listed as target pests. MACH 2 1.33% Plus Fertilizer controls listed larvae through a novel mode-of-action that starts within hours of ingestion. Actual death of larvae may take several days to occur.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exemptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Waterproof gloves
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Keep children and pets out of treated area until dusts have settled.

#081258

MACH 2^{*} 1.33% Plus Fertilizer

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry, well-ventilated area. Prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of reach of children.

Pesticide Disposal: Wastes resulting from the use of this product (that cannot be used according to label Instructions) may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Steps to be Taken if Material is Released or Spilled: Appropriate protective equipment must be worn when handling a spill of this material. If the container is leaking or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with handling of this material. Do not walk through spilled material. Dispose of pesticide as directed above. In spill or leak incidents, keep unauthorized people away.

USE RATE DETERMINATION

Carefully read, understand, and follow label use rates, recommendations and restrictions. Apply the amount specified with a properly calibrated fertilizer spreader. Check calibration periodically to ensure that equipment is working properly. Avoid overlaps that will increase rates above those recommended. Failure to follow the Directions for Use and all precautions on this label may result in grass injury or poor pest control.

APPLICATION TIMING

The activity of MACH 2 1.33% Plus Fertilizer is expressed following ingestion by the target larvae. Consequently, the timing of application is dependent upon the feeding behavior of the target pest. Consult your local State Extension Specialists for more specific information regarding timing of applications. To achieve optimal effectiveness, the following turf management practices are suggested:

- **Minimize thatch** since heavy thatch will prevent the insecticide from penetrating to the area where insects are feeding.
- **Make applications prior to egg hatch or when larvae are small and actively feeding** (late spring through mid summer).
- **MACH 2 1.33% Plus Fertilizer is not dependent upon immediate irrigation for activation;** however, water must transport the material through the thatch. Under conditions of drought it is recommended to water in MACH 2 1.33% Plus Fertilizer.

For Sod Farms: Allow at least 7 days to elapse between last application and harvest of sod.

Suggested Spreader Settings

		Recommended rates in lbs/1000 sq ft	
SPREADER TYPE		1.7	3.4
LESCO Rotary	Calibration Gauge	#12	#14
Cyclone® or Spyker®		4	4 1/4

Apply MACH 2 1.33% Plus Fertilizer with a drop or rotary spreader designed to apply granular insecticides. Avoid the use of spreaders that would apply this product in narrow rows or concentrated bands. Calibrate the spreader according to the manufacturers' directions for adjusting the spreader settings such that the spreader delivers the appropriate application rate recommended above. Apply this product uniformly over the lawn or ornamental turf area. A more uniform application can be made by spreading half the required amount over the area and then applying the remaining half at a right angle to the previous direction. Avoid streaking, skips, or overlaps during application.

USE DIRECTIONS FOR TURFGRASS

PEST	Amount of MACH 2 1.33% Plus Fertilizer	COMMENTS
Lepidoptera larvae such as: larvae of cutworms, sod webworms, armyworms, and fall armyworms	75 lb/acre 1.72 lb/1,000 sq ft	Apply at first sign of pest damage. A single repeat application can be made if needed.
White grub larvae such as: Japanese beetle, <i>Popillia japonica</i> Northern masked chafer, <i>Cyclocephala borealis</i> Southern masked chafer, <i>Cyclocephala lurida</i> May/June beetle, <i>Phyllophaga</i> spp. Black turfgrass ataenius, <i>Ataenius spretulus</i> Green June Beetle, <i>Cotinus nitida</i> Annual bluegrass weevil larvae, <i>Hyperodes</i> spp. Billbugs, <i>Sphenophorus</i> spp. Aphodius beetle, <i>Aphodius</i> spp. European chafer, <i>Rhizotrogus majalis</i> Oriental beetle, <i>Exomala orientalis</i>	112.5 - 150 lb/acre 2.6 - 3.40 lb/1,000 sq ft	MACH 2 1.33% Plus Fertilizer may be used as either a preventative or an early curative treatment (see application timing instructions). Make only one application.

Do not apply more than 150 lb (2 lb active ingredient) per acre per year regardless of pests controlled.

Use of this product on "Tifdwarf" Bermudagrass greens may result in short term discoloration of the turfgrass. Since many agronomic factors may influence this response it is recommended that users treat a small area at recommended rates prior to initiating large-scale use.

Notice: Read the entire label. Use only according to label directions. **Before using this product, read the Warranty elsewhere on this label. If terms are unacceptable, return at once unopened.**

IN CASE OF AN EMERGENCY ENDANGERING HEALTH OR ENVIRONMENT INVOLVING THIS PRODUCT, CALL 1-800-424-9300.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

WARRANTY

LESCO, Inc. warrants that this product conforms to the chemical description on this label. When used in accordance with label directions under normal conditions, this product is reasonably fit for its intended purposes. Since timing, method of application, weather, plant, and soil conditions, mixture with other chemicals, and other factors affecting the use of this product are beyond our control, no warranty is given concerning the use of this product contrary to label directions or under conditions which are abnormal or not reasonably foreseeable. The user assumes all risks of any such use.

Information concerning the raw materials composing this product can be obtained by writing to: LESCO, Inc., Attn. RA Dept., 1301 East 9th Street, Suite 1300, Cleveland, Ohio 44114-1849, referring to the item number found on this bag.

KEEP OUT OF REACH OF CHILDREN CAUTION

STATEMENT OF PRACTICAL TREATMENT

IF SWALLOWED: Call a physician or Poison Control Center immediately. Do not induce vomiting because of aspiration pneumonia hazard.

IF IN EYES: Flush with plenty of water. Get medical attention if irritation persists.

IF ON SKIN OR CLOTHING: Wash skin with soap and warm water. Get medical attention of irritation persists.

IF INHALED: Remove victim to fresh air. Apply artificial respiration if indicated.

For information regarding medical emergencies or pesticide incidents, call the International Poison Control Center at 1-888-740-8712.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed. Contains petroleum distillate. Do not induce vomiting because of aspiration pneumonia hazard. Avoid breathing vapors or spray mist. Avoid contact with skin or eyes. In case of contact, flush with plenty of water. Wash with soap and warm water after use. Obtain medical attention if irritation persists. This pesticide may cause skin sensitization reactions in certain individuals. Avoid contamination of food or feedstuffs.

ENVIRONMENTAL HAZARDS

This pesticide is highly toxic to fish. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift from treated areas may be hazardous to organisms in adjacent aquatic sites. Do not contaminate water when disposing of equipment washwaters.

PHYSICAL OR CHEMICAL HAZARDS

FLAMMABLE. Keep away from heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Use 2½ tablespoons per gallon of water. One quart makes 25 gallons (one pint makes 12.5 gallons) of diluted spray. Spray thoroughly contacting as many insects as possible on upper and lower leaf surfaces. Mix only enough for immediate use. Spraying should begin when the insects first appear. Do not wait until the plants are heavily infested.

This concentrate is relatively non-toxic to honey bees. To avoid possible harm to honey bees, it is advisable to apply in the early morning or late evening hours.

HOME VEGETABLE GARDENS

(RESIDENTIAL OUTDOOR AREAS AND IN HOME GREENHOUSES)

ROOT AND TUBER VEGETABLES: Including (but not limited to) Arracacha, Arrowroot, Purple Arrowroot, Japanese Artichoke, Jerusalem Artichoke, Beets, Sugar Beets, Edible Burdock, Carrots, Cassava (bitter or sweet), Celeriac (celery root), Chervil (turnip rooted), Chicory, Chuffa, Dasheen, Ginger, Ginseng, Horseradish, Leren, Parsley (turnip rooted), Parsnip, Potato, Radish, Japanese Radish (Daikon), Rutabaga, Salsify, Black Salsify, Spanish Salsify, Sweet Potato, Tanier, Turmeric, Turnip, Yam (true), Yam Bean.

LEAVES OF ROOT AND TUBER VEGETABLES: Including (but not limited to) Beet, Sugar Beet, Edible Burdock, Carrot, Cassava (bitter or sweet), Celeriac (celery root), Chervil (turnip rooted), Chicory, Dasheen, Parsnip, Radish, Japanese Radish (Daikon), Rutabaga, Black Salsify, Sweet Potato, Tanier, Turnip, Yam (true).

LEAFY VEGETABLES: Including (but not limited to) Amaranth (Leafy Amaranth, Chinese Spinach, Tampala), Arrugula, Celery, Celuice, Chervil, Cilantro, Corn Salad, Chrysanthemum (edible leaved), Chrysanthemum (garden), Cress (garden), Upland Cress (yellow rocket, winter cress), Dandelion, Dock (sorrel), Endive (escarole), Fennel (Florence), Lettuce (head and leafy), Orach, Parsley, Purslane (garden & winter), Rhubarb, Spinach, Fine Spinach (Malabar, Ceylon), Spinach (New Zealand), Swiss Chard.

BRASSICA (COLE) LEAFY VEGETABLES: Including (but not limited to) Broccoli, Chinese Broccoli (Gai Lan), Broccoli raab (Rapini), Brussels Sprouts, Cabbage, Chinese Cabbage (Bok Choy), Chinese Mustard Cabbage (Gai Choy), Cauliflower, Collards, Kale, Kohlrabi, Mustard Greens, Rape Greens.

LEGUME VEGETABLES (Succulent or Dried): Including (but not limited to) Adzuki Beans, Field Beans, Kidney Beans, Lima Beans, Moth Beans, Mung Beans, Navy Beans, Pinto Beans, Rice Beans, Runner Beans, Snap Beans, Tepary Beans, Urd Beans, Wax Beans, Asparagus Beans, Black-eyed Peas, Catjang, Chinese Longbeans, Cowpeas, Chowder Peas, Southern Peas, Yard-Longbeans, Broad Beans (Fava Beans), Chick Peas (Garbanzo Beans), Guar, Jackbean (Sword Bean), Lablab Bean (Hyacinth Bean), Lentils, Peas (Garden Peas, Field Peas, Sugar Peas), Pigeon Peas, Soybeans.

FOLIAGE OF LEGUME VEGETABLES: Including (but not limited to) plant part of any legume vegetable included in the legume vegetable group that will be used as animal feed including any variety of Beans, Field Peas, Soybeans.

FRUITING VEGETABLES: Including (but not limited to) Eggplant, Ground Cherry, Okra, Pepinos, Pepper (Bell Pepper, Chili Pepper, Cooking Peppers, Pimentos, Sweet Peppers), Tomatillo, Tomatoes.

CUCURBIT VEGETABLES: Including (but not limited to) Balsam Pear (Bitter Melon), Chinese Waxgourd, Citron Melon, Cucumber, Gherkin, Edible Gourds, Melons (including hybrids, Cantaloupe, Casaba, Crenshaw, Honeydew Melons, Honey Balls, Mango Melon, Muskmelon, Persian Melon), Pumpkin, Squash (summer & winter), Watermelon (including hybrids).

CITRUS FRUITS: Including (but not limited to) Calamondin, Citrus Citron, Citrus Hybrids, Grapefruit, Kumquats, Lemons, Limes, Mandarin (Tangerine), Orange (sweet & sour), Pummelo, Satsuma Mandarin.

POME FRUITS: Including (but not limited to) Apple, Crabapple, Loquat, Pear, Oriental Pear, Quince.

STONE FRUITS: Including (but not limited to) Apricot, Cherry (sweet & sour), Nectarine, Peach, Plum, Prune, Chickasaw Plum, Damson Plum, Japanese Plum.

NOTE: This is a specimen label for electronic distribution. Always refer to product label on container for specific directions for use.

SMALL FRUITS AND BERRIES: Including (but not limited to) Blackberry, Blueberry, Cranberry, Currant, Dewberry, Elderberry, Gooseberry, Grape, Huckleberry, Loganberry, Olallie Berry, Raspberry (black & red), Strawberry, Youngberry.

ORIENTAL VEGETABLES: Including (but not limited to) Japanese Artichoke, Chinese Broccoli (Gai Lan), Chinese Cabbage (Bok Choy), Chinese Mustard Cabbage (Gai Choy), Dasheen, Ginger, Ginseng, Chinese Longbeans, Mung Beans, Citron Melon, Balsam Pear (Bitter Melon), Japanese Radish (Daikon), Chinese Spinach, Chinese Waxgourd.

ADDITIONAL CROPS: Asparagus, Onions (bulb and green), Rice.

ORNAMENTALS: Including (but not limited to) African Violet, Aster, Azalea, Begonia, Calceolaria, Calendula, Calla, Camellia, Carnation, Cineraria, Chrysanthemum, Cypress, Daffodil, Dahlia, Dogwood, Elm, Eucalyptus, Fern, Ficus, Geranium, Gladiolus, Gypsophila, Holly, Juniper, Lily, Marigold, Oak, Palm, Peony, Petunia, Philodendron, Pine, Roses, Snapdragon, Sweet Pea, Tulips, Viburnum, Wandering Jew, Yew, Zinnia.

FOR THE CONTROL OF INSECTS: Including (but not limited to) Ants, Aphids, Armyworms, Asparagus Beetle, Blister Beetles, Cabbage Looper, Caterpillars, Cockroaches, 12-spotted Cucumber Beetle, Colorado Potato Beetles, Corn Earworm, Crickets, Cross-striped Cabbageworm, Cucumber Beetles, Deer Fly, Diamondback Larvae, Fireworms, Flea Beetles, Fruit Flies, Fruittree Leafroller, Grape Leafhopper, Green Peach Aphids, Greenhouse Thrips, Gypsy Moth (adults & larvae), Harlequin Bug, Heliothis sp., Imported Cabbageworm, Leafhopper, Leafrollers, Leaf-tiers, Lice, Mexican Bean Beetle, Potato Leafhopper, Psyllids, Skippers, Stink Bugs, Thrips, Vinegar Flies, Webworms, and Whiteflies.

STORAGE AND DISPOSAL

STORAGE: Store in a cool, dry place inaccessible to children. Keep container closed.

DISPOSAL: Do not reuse empty container. Wrap container in several layers of newspaper and discard in garbage.

NOTICE TO BUYER

Seller warrants this product conforms to its chemical description on this label and is reasonably fit for the purposes stated on this label when used in accordance with directions under normal use conditions. This warranty does not extend to use of this product contrary to label directions, or under abnormal use conditions, or under conditions not reasonably foreseeable to seller. Buyer assumes all risk of any such use. Seller makes no other warranties, either express or implied.

(for DEC use only)

Stormwater Discharges Associated with Construction Activity Under State Pollutant Discharge Elimination System (SPDES) General Permit # GP-0-20-001

All sections must be completed unless otherwise noted. Failure to complete all items may result in this form being returned to you, thereby delaying your coverage under this General Permit. Applicants must read and understand the conditions of the permit and prepare a Stormwater Pollution Prevention Plan prior to submitting this NOI. Applicants are responsible for identifying and obtaining other DEC permits that may be required.

Tax Map Numbers

1. Provide the Geographic Coordinates for the project site in NYTM Units. To do this you **must** go to the NYSDEC Stormwater Interactive Map on the DEC website at:

www.dec.ny.gov/imsmaps/stormwater/viewer.htm

Zoom into your Project Location such that you can accurately click on the centroid of your site. Once you have located your project site, go to the tool boxes on the top and choose "i"(identify). Then click on the center of your site and a new window containing the X, Y coordinates in UTM will pop up. Transcribe these coordinates into the boxes below. For problems with the interactive map use the help function.

X Coordinates (Easting)

-73.72579336166382

Y Coordinates (Northing)

41.093082118990516

2. What is the nature of this construction project?

☐ New Construction☒ Redevelopment with increase in impervious area☐ Redevelopment with no increase in impervious area

3. Select the predominant land use for both pre and post development conditions.

SELECT ONLY ONE CHOICE FOR EACH

**Pre-Development
Existing Land Use**

- ☐ FOREST
☐ PASTURE/OPEN LAND
☐ CULTIVATED LAND
☐ SINGLE FAMILY HOME
☐ SINGLE FAMILY SUBDIVISION
☐ TOWN HOME RESIDENTIAL
☐ MULTIFAMILY RESIDENTIAL
☐ INSTITUTIONAL/SCHOOL
☐ INDUSTRIAL
☒ COMMERCIAL
☐ ROAD/HIGHWAY
☐ RECREATIONAL/SPORTS FIELD
☐ BIKE PATH/TRAIL
☐ LINEAR UTILITY
☐ PARKING LOT
☐ OTHER

25. Has a construction sequence schedule for the planned management practices been prepared? ☒ Yes ☐ No

☒ Yes ☐ No

26. Select **all** of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural

- Check Dams
- Construction Road Stabilization
- Dust Control
- Earth Dike
- Level Spreader
- Perimeter Dike/Swale
- Pipe Slope Drain
- Portable Sediment Tank
- Rock Dam
- Sediment Basin
- Sediment Traps
- Silt Fence
- Stabilized Construction Entrance
- Storm Drain Inlet Protection
- Straw/Hay Bale Dike
- Temporary Access Waterway Crossing
- Temporary Stormdrain Diversion
- Temporary Swale
- Turbidity Curtain
- Water bars

Biotechnical

- Brush Matting
- Wattling

Other

[illegible]

Vegetative Measures

- ☐ Brush Matting
- ☐ Dune Stabilization
- ☐ Grassed Waterway
- ☒ Mulching
- ☒ Protecting Vegetation
- ☐ Recreation Area Improvement
- ☒ Seeding
- ☐ Sodding
- ☐ Straw/Hay Bale Dike
- ☐ Streambank Protection
- ☐ Temporary Swale
- ☒ Topsoiling
- ☐ Vegetating Waterways

Permanent Structural

- ☐ Debris Basin
- ☒ Diversion
- ☐ Grade Stabilization Structure
- ☒ Land Grading
- ☐ Lined Waterway (Rock)
- ☐ Paved Channel (Concrete)
- ☐ Paved Flume
- ☒ Retaining Wall
- ☐ Riprap Slope Protection
- ☒ Rock Outlet Protection
- ☐ Streambank Protection

Post-construction Stormwater Management Practice (SMP) Requirements

Important: Completion of Questions 27-39 is not required if response to Question 22 is No.

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.

- ☐ Preservation of Undisturbed Areas
- ☒ Preservation of Buffers
- ☐ Reduction of Clearing and Grading
- ☐ Locating Development in Less Sensitive Areas
- ☐ Roadway Reduction
- ☒ Sidewalk Reduction
- ☐ Driveway Reduction
- ☐ Cul-de-sac Reduction
- ☐ Building Footprint Reduction
- ☒ Parking Reduction

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).

- ☒ All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).
- ☐ Compacted areas were considered as impervious cover when calculating the **WQv Required**, and the compacted areas were assigned a post-construction Hydrologic Soil Group (HSG) designation that is one level less permeable than existing conditions for the hydrology analysis.

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout).

Total WQv Required

acre-feet

29. Identify the RR techniques (Area Reduction), RR techniques (Volume Reduction) and Standard SMPs with RRv Capacity in Table 1 (See Page 9) that were used to reduce the Total WQv Required (#28).

Also, provide in Table 1 the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use Tables 1 and 2 to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

**Table 1 - Runoff Reduction (RR) Techniques
and Standard Stormwater Management
Practices (SMPs)**

Table 2 - Alternative SMPs
(DO NOT INCLUDE PRACTICES BEING
USED FOR PRETREATMENT ONLY)

Alternative SMP		Total Contributing Impervious Area (acres)			
<input type="radio"/> Hydrodynamic					
<input type="radio"/> Wet Vault					
<input type="radio"/> Media Filter					
<input type="radio"/> Other					

Provide the name and manufacturer of the Alternative SMPs (i.e. proprietary practice(s)) being used for WQv treatment.

[illegible]

Note: Redevelopment projects which do not use RR techniques, shall use questions 28, 29, 33 and 33a to provide SMPs used, total WQv required and total WQv provided for the project.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29.

Total RRv provided

		2
--	--	---

.

4	7	3
---	---	---

acre-feet

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28).

☐ Yes ☒ No

If Yes, go to question 36.

If No, go to question 32.

32. Provide the Minimum RRv required based on HSG.
[Minimum RRv Required = (P) (0.95) (Ai)/12, Ai=(S) (Aic)]

Minimum RRv Required

		0
--	--	---

.

6	1	4
---	---	---

acre-feet

- 32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?

☒ Yes ☐ No

If Yes, go to question 33.

Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of the WQv required (#28) must also be included in the SWPPP.

If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. Identify the Standard SMPs in Table 1 and, if applicable, the Alternative SMPs in Table 2 that were used to treat the remaining total WQv(=Total WQv Required in 28 - Total RRv Provided in 30).

Also, provide in Table 1 and 2 the total impervious area that contributes runoff to each practice selected.

Note: Use Tables 1 and 2 to identify the SMPs used on Redevelopment projects.

- 33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question 29.

WQv Provided

acre-feet

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - RRv provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)? ☒ Yes ☐ No

If Yes, go to question 36.

If No, sizing criteria has not been met, so NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv) required and provided or select waiver (36a), if applicable.

CPv Required

acre-feet

CPv Provided

acre-feet

- 36a. The need to provide channel protection has been waived because:

- ☐ Site discharges directly to tidal waters or a fifth order or larger stream.
- ☒ Reduction of the total CPv is achieved on site through runoff reduction techniques or infiltration systems.

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (37a), if applicable.

Total Overbank Flood Control Criteria (Qp)

Owner/Operator Certification

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

Appendix E

Northeast Bald Eagle Project Screening Form

NORTHEAST BALD EAGLE PROJECT SCREENING FORM

Welcome!

What is the purpose of this form? The U.S. Fish and Wildlife Service (Service) designed this form as a voluntary tool to help people comply with the Bald and Golden Eagle Protection Act (BGEPA) by planning activities in a manner that avoids disturbing nesting bald eagles. To disturb a bald eagle nest means to agitate or bother a bald eagle to a degree that causes, or is likely to cause, that eagle to abandon its nest, suffer injury, or be unable to perform activities necessary to its survival. While all guidance included in this form is voluntary, individuals and organizations that disturb eagles may be subject to fine and prosecution under BGEPA.

How is this form different from the National Bald Eagle Management Guidelines? The National Bald Eagle Management Guidelines ([Guidelines](#)) is a document published by the Service in 2007 that provides background information on the biology of bald eagles, explains the Federal laws and regulations protecting them, and lays out guidance for several categories of human activities that can affect their nesting. This form takes the Guideline's recommendations, fits them to the regional conditions of the Northeast, and offers them to you in an interactive and intuitive format. Because the form fits its assessments and recommendations to the needs and behaviors of nesting bald eagles in the Northeast, you may find that it differs from the Guidelines on certain details. Nonetheless, the ultimate goal remains the same: to keep project proponents in compliance with BGEPA, while also protecting nesting bald eagles from disturbance.

How this form works. To complete this form, first, find the category of activities that includes your proposed activity. Then, go to the page listed for that category to assess whether your project may risk disturbing nesting bald eagles. If the form identifies that your activities may disturb nesting bald eagles, follow the recommended avoidance measures. These measures will identify factors that could influence nesting eagles' sensitivity to your activities: distance, visibility, timing, and exposure to other human activities. Sign the self-certification that you have committed to implementing the appropriate measures. If your proposed activities fall into multiple categories, repeat this process for each category. Additionally, if your project has the potential to affect multiple nests, complete a separate form for each nest site.

What to do with your completed form. Once you have signed your self-certification, keep the form for your personal records. You do not need to submit your completed form to the Service. Keep the form and additional pages that may be helpful to your future planning and compliance. If a local, state, or federal authority asks for documentation that you are complying with the Service's regional guidance, you can present them with your completed and signed form.

INTRODUCTION

What to know before you start. You will need a few pieces of information to help you complete this form.

Breeding Season

For temporary activities that might be loud or very visible, one of the simplest and most effective ways to avoid disturbing a bald eagle nest is to time the activity when eagles are not nesting, that is, outside the bald eagle breeding season. Wildlife agencies often refer to this type of measure as a time-of-year restriction. The bald eagle breeding season lasts approximately seven to eight months and has many stages. Start and end dates to this season can vary by location, year, and breeding pair. For simplicity, general dates are often set at a statewide level. Consult Appendix A to find the breeding season in your area.

Visibility

For some categories of activities, this form will ask whether your project activities will be visible to the nest. There are two general approaches to answering this question, a desktop assessment and a site visit. A desktop assessment involves consulting online mapping resources, such as Google Maps or state nest maps (see Appendix B), which can display your project location and the nest location on satellite or aerial imagery. When viewing this imagery, look to see whether there are landscape features or structures that might screen the nest's view of your activities. Your assessment is only as good as your imagery. Make sure the imagery is current and accurately reflects visibility conditions on the ground.

The second option is to visit your project location. Assess from various points in your project footprint whether you can see the nest. Use binoculars (4X power or greater) or spotting scope to assist your viewing. If you plan to visit the project site during the breeding season, be aware that your presence could also disturb the nest. Maintain 330' feet between you and the nest, or at least as much distance as the nearest ongoing foot traffic at the nest site. You should only perform your site visit from property legally accessible to you.

Using both the field and desktop approach will give you your best answer. If there is need to select between the two options, a site visit will generally provide a better sense of visibility. In either approach, consider that your activities may become more visible during portions of the year when leaves are off trees and other vegetation.

Nest Location

To figure out how close or how visible your activities will be, you will need precise knowledge of the nest's location. If you do not already have this information, check Appendix B to see if any online or state resources are available. If you are unable to get this information from any of these sources, survey the site. As when assessing visibility, you should only perform your visit on property legally accessible to you. You should also avoid coming within 330 feet of a nest during the breeding season, unless you know that the eagles have previously tolerated people at whatever shorter distance you are planning to use. For descriptions and examples of bald eagle nests, and explanation of how they differ from other large bird nests, see "Appendix C – Guide to Nest Identification."

INTRODUCTION

If you feel unable to perform this search, consider employing the services of a wildlife biologist experienced in this type of surveying. Alternatively, consider contacting your state or local wildlife agency to see if they would be able to perform a site visit (please be aware that many state and local wildlife agencies are constrained in their resources and time and may not be able to offer this service). Be sensitive to sharing information about nest locations. Attracting public interest to a nest site can threaten the safety of that nest. Some states also continue to prohibit the release of nest locations.

It is possible that you will be unable to find a reported nest. While bald eagles commonly use nests across breeding seasons, nests do not always survive from one season to the next. Nests may fall apart of their own accord or be blown down by high winds. Bald eagles may also stop using a nest for one season or more, even if the nest as a structure still exists. In these scenarios, bald eagles may still reuse a former nest site in the following breeding seasons. The temporary absence of a nest or nesting eagles does not absolve you of your responsibilities to avoid disturbing future nesting at that site. The Service recommends implementing the measures included in this form for five years after the last breeding season eagles used a nest or, where the nest no longer exists, three years after the last breeding season in which the nest existed.

Similar Activities

One of the best indicators of what a nesting bald eagle pair will tolerate is what they have already tolerated. In certain places, this form will ask whether the nesting pair has experienced and tolerated similar activities at the nest location. To answer this question, you will need to know about previous human activity at that location. Was that activity similar in nature to what you propose? As close as or closer than what you propose to do? Did it occur at the same time of day? Time of year? Did it last as long? Was it as frequent? Was it as loud? Was it as visible? You will also need to know basic history about the nest. Did the nest exist before that previous activity? Was it ever used after that activity? If your answer to any of these questions is 'no,' you cannot answer 'yes' to the broader question of whether there is similar activity at that site. See "Appendix D – Similar Activity Example Exercise" for a demonstration of how to apply this principle.

Limitations

Know when and how you should be using this form. See "Appendix E – Limitations of this form."

Where to go for help. The Service understands that project proponents may occasionally need clarification on which assessments are relevant to them and how to implement certain avoidance and minimization measures. If you find you are unable to complete this form, you can contact your regional eagle coordinator (Tom Wittig) for assistance at

thomas_wittig@fws.gov - or - 413-253-8577

When emailing, please include in your subject line "BALD EAGLE SCREENING FORM QUESTION." If you are unable to connect with your regional eagle coordinator when calling, please leave a voice message that you are calling about this form and how best to reach you.

For explanation of technical terms used in this form, see "Appendix F – Glossary of Terms."

PROJECT ACTIVITY CATEGORY(S)

Place a check next to all activities you plan to perform.

- ☐ Construction and Development Activities → go to pages 5 - 7
- ☐ Maintenance and Restoration Activities → go to pages 8 - 9
- ☐ Timber Operation and Forestry Practices → go to page 10
- ☐ Use of Helicopters and Fixed-wing Aircraft → go to page 11
- ☐ Blasting and Other Loud, Intermittent Noises (including Fireworks) → go to page 12
- ☐ Recreational Activities → go to pages 13 – 14

Feedback? The Service is continuously looking to improve this form. If you have suggested changes, please feel free to email them to us at thomas_wittig@fws.gov. Include “Bald Eagle Project Screening Form – Feedback” in your subject line.

Construction and Development Activities

Which specific construction activities do you plan to perform? (check all that apply)

- | | |
|--|--|
| <input type="checkbox"/> Building construction | <input type="checkbox"/> Water impoundment or withdrawal |
| <input type="checkbox"/> Tree and land clearing | <input type="checkbox"/> Mining |
| <input type="checkbox"/> Construction of roads, trails, canals, power lines, pipelines and other linear utilities | <input type="checkbox"/> Oil and natural gas drilling and refining |
| <input type="checkbox"/> Agriculture or aquaculture – new or expanded operations | <input type="checkbox"/> Wind farm construction |
| <input type="checkbox"/> Alteration of shorelines or wetlands | <input type="checkbox"/> Installation or expansion of marinas with a capacity of 6 or more boats |
| <input type="checkbox"/> Installation of docks, piers, or moorings (pile driving may qualify as loud noise, page 12) | <input type="checkbox"/> Communications tower construction (excluding maintenance and repairs) |

Is your activity similar to an ongoing or previous activity that coincided with the breeding season and that bald eagles tolerated? Consider both construction and use/operation of your project.

Consider all of the following elements/factors in answering:

-duration	-time of season	-area/footprint
-frequency	-visibility	-magnitude
-time of day	-distance	-nature

- ☐ Yes → No avoidance measures recommended. Go to self-certification (page 7).
- ☐ No → Go to next question.

Will your activities be visible to the bald eagle nest(s)?

- ☐ Yes → Stop. Implement Avoidance Measures (AM) 2, 4, and 5 (see page 7)
- ☐ No → Go to the next question

CONSTRUCTION & DEVELOPMENT

Which of these categories most closely matches your proposed project or activity?

(check all that apply)

- ☐ Building construction, 1 or 2 story, with a project footprint of ½ acre or less
- ☐ Construction of roads, trails, canals, power lines, or other linear utilities
- ☐ Agriculture or aquaculture – new or expanded operations
- ☐ Alteration of shorelines or wetlands
- ☐ Installation of docks or moorings
- ☐ Water impoundment or withdrawal
- ☐ Construction of communication towers

→ Implement AM 3, 4 and 5 (page 7)

- ☐ Building construction or expansion, 3 or more stories
- ☐ Building construction or expansion, 1 or 2 story, with project footprint more than ½ acre
- ☐ Mining
- ☐ Oil and natural gas drilling and refining
- ☐ Installation or expansion of marinas with a capacity of 6 or more boats

→ Go to the next question

Is there a similar activity within 1 mile of the nest?

- ☐ Yes → Implement AM 3, 4 and 5 (see page 7)
- ☐ No → Implement AM 1 and 5 (see page 7)

AVOIDANCE MEASURES - Place a check mark next to each avoidance measure (AM) that this form instructed you to implement and that you can commit to following. The Service recommends you follow the applicable AMs to prevent your activities from disturbing nesting bald eagles.

- ☐ AM 1 – Maintain a distance buffer of at least 660 feet (200 meters) between all project activities and the nest.
- ☐ AM 2 – Maintain a distance buffer of at least 660 feet (200 meters) between all project activities and the nest. If there is an existing human-made feature (e.g., house, road, dock) similar to your project that is closer than 660 feet and tolerated by the nesting eagles, maintain a distance buffer equal to or greater than the distance separating that tolerated feature and the nest.
- ☐ AM 3 – Maintain a distance buffer of at least 330 feet (100 meters) year-round between all project activities and the nest. If a similar activity (i.e., similar in kind and size) is closer than 330 feet and has been tolerated by eagles, the distance buffer will be the same or greater than that of the existing tolerated activity.
- ☐ AM 4 – Do not perform disruptive project activities within 660 feet (200 meters) of the nest during the breeding season. This time-of-year restriction is in addition to your recommended distance buffer. Disruptive activities include, but are not limited to, external construction, excavation, use of heavy equipment, use of loud equipment or machinery, vegetation clearing, earth disturbance, planting, and landscaping.
- ☐ AM 5 – Maintain existing landscape buffers that visually screen the activity from the nest.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

(signature)

(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.

Go to page 15 for further instruction.

Maintenance and Restoration Activities

This category includes outdoor maintenance of existing structures or infrastructure, where the maintenance activity is temporary and obtrusive (e.g., requires use of heavy equipment or loud machinery), and within the previously disturbed footprint of the structure or infrastructure. If maintenance is proposed outside the previously disturbed footprint, see **Construction and Development Activities** (pages 5-7). This category also applies to the maintenance and restoration of natural habitats (e.g., wetlands, streams, rivers, non-forested uplands). This category does not include routine, ongoing activities to which bald eagles have already exhibited a tolerance (e.g., lawn mowing; plowing, planting or harvesting of agricultural fields; etc.).

Which maintenance or restoration activities do you plan to perform? (check all that apply)

- ☐ Maintenance of linear utilities (e.g., power lines, pipelines, water and sewer lines)
- ☐ Road, bridge, or culvert maintenance
- ☐ Trail, campground, or recreational area maintenance
- ☐ Maintenance of oil and gas wells, well pads, and storage tanks
- ☐ Maintenance of dams, levees, berms, canals and other water-control structures
- ☐ Pond, lake, or reservoir maintenance (draw downs, dredging)
- ☐ Stream or stream bank maintenance /restoration (e.g., stream bank fencing, stream bank stabilization, livestock crossings, in-stream habitat improvements, channel maintenance, dredging)
- ☐ Wetland maintenance / restoration (e.g., invasive plant control, restoration of hydrology)
- ☐ Prescribed burning for invasive control
- ☐ Upland habitat maintenance / restoration (e.g., planting or cutting of vegetation, invasive plant control, trash cleanup, abandoned mine lands restoration). This does not include activities in forests/woodlands (see **Timber Operation and Forestry Practices**) or in agricultural fields.

Is your activity similar to an ongoing or previous activity that coincided with the breeding season and that bald eagles tolerated? Consider both construction and use/operation of your project.

Consider all of the following elements/factors in answering:

-duration	-time of season	-area/footprint
-frequency	-visibility	-magnitude
-time of day	-distance	-nature

- ☐ Yes → No avoidance measures recommended. Go to self-certification.
- ☐ No → Go to Avoidance Measures.

AVOIDANCE MEASURES - Place a check mark next to each AM that you can commit to following. The Service recommends you follow these AMs to prevent your activities from disturbing nesting bald eagles.

- ☐ AM 6 - Within 660 feet (200 meters) of the nest, perform all loud and intrusive maintenance and restoration work outside the breeding season. These activities include, but are not limited to, the following: construction, excavation, use of heavy equipment, use of loud equipment or machinery, vegetation clearing, earth disturbance, planting, landscaping, and habitat restoration activities.
- ☐ AM 7 - Maintain existing landscape buffers that visually screen the activity from the nest.
- ☐ AM 8 - Do not perform prescribed burning within 660 feet (200 meters) of the nest during the breeding season. If there is no practicable alternative to scheduling prescribed burning during the breeding season, only conduct burns when adult eagles and young are absent from the nest tree (i.e., at the beginning of, or end of, the breeding season, either before the particular nest is in use or after the young have fledged from that nest).
- ☐ AM 9 - When performing prescribed burning within the drip line of the nest tree, rake leaves, vines, and woody debris from around the base of the tree to prevent fire from climbing the tree. When burning within a patch of forest containing the nest tree, take precautions to prevent crown fire.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

(signature)

(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.

Go to page 15 for further instruction.

Timber Operation and Forestry Practices

AVOIDANCE MEASURES - Place a check mark next to each AM that you can commit to following. The Service recommends you follow these AMs to prevent your activities from disturbing nesting bald eagles.

- ☐ AM 10 – Do not perform clear-cutting or overstory tree removal within 330 feet (100 meters) of the nest at any time of the year.
- ☐ AM 11 - During the breeding season, do not perform timber harvesting, road construction, chain saw use, or yarding operations within 660 feet (200 meters) of the nest. Around alternate nests (including nests that were attended during the current breeding season but not used to raise young), you may reduce this distance to 330 feet (100 meters), provided the eggs laid in another nest within the nesting territory have hatched.
- ☐ AM 12 – Do not construct or operate log transfer facilities and in-water log storage areas within 330 feet (100 meters) of nests at any time of the year.
- ☐ AM 13 – Do not perform selective thinning, prescribed burning, or other similar silviculture practices for the enhancement or conservation of habitat within 660 feet (200 meters) of the nest during the breeding season. If there is no practicable alternative to scheduling prescribed burning during the breeding season, only conduct burns when adult eagles and young are absent from the nest tree (i.e., at the beginning of, or end of, the breeding season, either before the particular nest is active or after the young have fledged from that nest).
- ☐ AM 14 – When performing prescribed burning within the drip line of the nest tree, rake leaves, vines, and woody debris from around the base of the tree to prevent fire from climbing the tree. When burning within a patch of forest containing the nest tree, take precautions to prevent crown fire.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

(signature)

(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.

Go to page 15 for further instruction.

Use of a Helicopter and Fixed-wing Aircraft

Is your activity similar to an ongoing or previous activity that coincided with the breeding season and that bald eagles tolerated?

Consider all of the following elements/factors in answering:

- | | | |
|--------------|-----------------|-----------------|
| -duration | -time of season | -area/footprint |
| -frequency | -visibility | -magnitude |
| -time of day | -distance | -nature |

- ☐ Yes → No avoidance measures recommended. Go to self-certification.
- ☐ No → Go to Avoidance Measures.

AVOIDANCE MEASURES - Place a check mark next to each AM that you can commit to following. The Service recommends you follow this AM to prevent your activities from disturbing nesting bald eagles.

- ☐ AM 15 - During the breeding season, do not fly within 1000 feet (305 meters) of bald eagle nests.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

(signature)

(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.
Go to page 15 for further instruction.

Blasting and Other Loud, Intermittent Noises (including Fireworks)

Is your activity similar to an ongoing or previous activity that coincided with the breeding season and that bald eagles tolerated?

Consider all of the following elements/factors in answering:

-duration	-time of day	-distance
-frequency	-time of season	-volume

- ☐ Yes → No avoidance measures recommended. Go to self-certification.
- ☐ No → Go to Avoidance Measures.

AVOIDANCE MEASURES - Place a check mark next to each AM that you can commit to following. The Service recommends you follow this AM to prevent your activities from disturbing nesting bald eagles.

- ☐ AM 16 - During the breeding season, do not perform blasting and other activities that produce extremely loud noises within 1/2 mile (800 meters) of in-use nests. This measure also applies to the use of fireworks classified by the Federal Department of Transportation as Class B explosives, which includes the larger fireworks intended for licensed public display.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

_____	_____
(signature)	(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.
Go to page 15 for further instruction.

Recreational Activities

Is your activity similar to an ongoing or previous activity that coincided with the breeding season and that bald eagles tolerated?

Consider all of the following elements/factors in answering:

-duration	-time of season	-area/footprint
-frequency	-visibility	-magnitude
-time of day	-distance	-nature

- ☐ Yes → No avoidance measures recommended. Go to self-certification.
- ☐ No → Go to next question

Will your recreation occur during the breeding season?

- ☐ Yes → Go to Avoidance Measures.
- ☐ No → No avoidance measures recommended. Go to self-certification.

AVOIDANCE MEASURES – For each applicable recreational subcategory, place a check mark next to the AMs you can commit to following. The Service recommends you follow the applicable AMs to prevent your activities from disturbing nesting bald eagles.

Non-motorized recreation and human entry (including hiking, camping, fishing, hunting, canoeing)

- ☐ AM 17 - Stay at least 330 feet (100 meters) from the nest if you walk, bike, canoe, camp, fish, or hunt near an eagle nest during the breeding season and your activity will be visible or can be heard from the nest.

Off-road vehicle use (including snowmobiles)

- ☐ AM 18 - Stay at least 330 feet (100 meters) from the nest. In open areas, where there is increased visibility and exposure to noise, stay at least 660 feet (200 meters) from the nest.

RECREATION

Motorized watercraft use (including jet skis/personal watercraft)

- ☐ AM 19 - Do not operate jet skis (personal watercraft) or airboats within 330 feet (100 meters) of the nest.
- ☐ AM 20 - Avoid concentrations of noisy vessels (e.g. commercial fishing boats and tour boats) within 330 feet (100 meters) of the nest, except where eagles have demonstrated tolerance for such activity.
- ☐ AM 21 - For all motorized boat traffic within 330 feet (100 meters) of the nest, minimize trips and avoid stopping in the area, particularly where eagles are unaccustomed to boat traffic.

Do you commit to following all recommended avoidance measures?

- ☐ YES – I certify that I have completed this form to the best of my ability, answered all questions completely and accurately, and committed to implementing all applicable avoidance measures.

(signature)

(date)

U.S. Fish and Wildlife Service Determination: Based on your responses and commitment to implementing all applicable avoidance measures, the Service has determined that your proposed activities are unlikely to disturb nesting bald eagles.

- ☐ NO – I am unable to follow one or more of the avoidance measures recommended by this form.

Go to page 15 for further instruction.

FURTHER GUIDANCE

-- SEEK FURTHER GUIDANCE --

You have indicated that you are unable to implement all the recommended avoidance measures. Without all avoidance measures, your activities may risk disturbing nesting bald eagles.

Consult with your regional eagle coordinator to determine the appropriate next steps. The Service will work with you to help develop alternate measures to avoid disturbance of nesting bald eagles. If there are no feasible alternate measures, the Service may advise that you obtain an eagle incidental take permit to relieve you of legal liability in the event that your activities unintentionally disturb nesting bald eagles.

Contact your regional eagle coordinator (Tom Wittig) for assistance at thomas_wittig@fws.gov

When emailing, please include in your subject line “[Your project name] – SCREENING FORM FURTHER GUIDANCE.” In the body of your message, include

- a brief description of your project, including its location and when you plan to start;
- the activity category(s);
- the ID number(s) (e.g., AM 5) of the Avoidance Measure(s) you are unable to implement; and
- the nest location(s), if available.

To see the Service’s eagle incidental take permit application form, go to

<https://www.fws.gov/forms/3-200-71.pdf>

For answers to Frequently Asked Questions on this form, go to

<https://www.fws.gov/migratorybirds/pdf/policies-and-regulations/3-200-71FAQ.pdf>

The Service advises you talk with your regional eagle coordinator before deciding to apply.

Please note that maps are not exhaustive records of all nests within that state.

APPENDIX C

Guide to Nest Identification

Is it a bald eagle nest? Because bald eagle populations have grown so rapidly in recent years, not every bald eagle nest is registered to an online map or known to wildlife management agencies. As a result, project screening form users may occasionally have to make their own assessment of whether the nest near their project or activity is a bald eagle nest. Users should be cautious in making these determinations. Bald eagle nests can easily be confused with nests of other large birds such as osprey.

This guide will help landowners and project proponents assess whether a nest belongs to bald eagles or another species. It describes for readers the most commonly encountered large nests in the Northeast, with several reference figures for bald eagle nests, and provides tips for telling nest types apart. Any user who reads this guide and still feels uncertain about what type of nest they have encountered should contact their regional eagle coordinator for further guidance.

Common types of large nests.Bald Eagle

The most notable aspect to a bald eagle nest is generally its size. Bald eagles build some of the largest nests in the world, with most nests around 5 feet in diameter and 3 feet in height (Fig. 1). Nests can grow well beyond these dimensions (Fig. 2), as bald eagles tend to repair and expand their nests each year and can use individual nests for decades. Bald eagle nests are mainly composed of large interwoven sticks. Nests will also have a soft interior bowl made up of materials such as hay, cornhusks, and grass clippings. However, this portion of the nest is rarely visible to human observers. The shape of bald eagle nests varies; they can take the general form of flat discs, inverted cones, cylinders (Fig. 2), or spheres (Fig. 3).

Bald eagles typically place their nests in prominent trees that sit above the surrounding forest canopy. These nest trees will often be on hillsides, lake and ocean shorelines, riverbanks, and forest edges. Nests are generally in the top third of a tree, below the crown, secured in a prominent fork off the main trunk (Fig. 4.). Bald eagle nests can be in living deciduous (Fig. 3-4) and coniferous trees (Fig. 1), or dead trees (snags; Fig. 5). Within the Northeastern U.S., bald eagles use a wide range of tree types, including white pines, loblolly pines, tulip poplars, sycamores, oaks, and cottonwoods. Despite their common perception as an emblem of wilderness, bald eagles are also increasingly nesting on human-made structures such as electric transmission towers (Fig. 6) and communication towers.

Osprey

Osprey build large stick nests that can look quite similar to bald eagle nests. In general, osprey nests are smaller, flatter, more disorganized, and more often composed of unnatural materials, such as bailing twine and plastic bags. Osprey also show a stronger preference than bald eagles for human made structures, regularly nesting on light polls, channel markers, and cell towers. When osprey do select a natural support for their nest, it tends to be the topmost part of dead trees, in contrast to bald eagles, which seek out slightly lower portions of trees.

The best clue to which species occupies a nest, osprey or bald eagles, is who shows up. Bald eagles arrive back at their nests earlier in the year than osprey, but by late spring, both species are usually attending their nests. At this time of year, watching a nest over a period of hours will generally reveal which species is using it. However, through fall and early winter, both species are usually away from their nests. During these seasons, the only immediate sources of information on nest will be the physical details described above and online mapping resources.

In addition to the state maps for bald eagles listed in Appendix C, Osprey Watch (<http://www.osprey-watch.org/>) provides a mapping database of osprey nest locations. As with the bald eagle mapping resources, this map is thorough, but does not represent all existing nests.

Red-Tailed Hawk/Red-Shouldered Hawk

Generally around 1.5 feet wide and 2 feet tall, nests of red-tailed hawks and red-shouldered hawks are less than one-half the size of bald eagle nests. The individual sticks in these hawk nests also tend to be smaller, with diameters of about 1-2 inches. Overall appearance of these nests can be slightly more frayed and chaotic than that of bald eagle nests. Like bald eagles, both hawk species show a tendency towards nesting in upper portions of prominent trees. Red-tailed hawks also share bald eagle's occasional preference for human made structures such as cell towers and transmission towers.

Common Raven

Common ravens construct stick nests that vary substantially in size, from 1.5 to 5 feet across and from little over 0.5 to 2 feet high. The sticks making up the main structure of these nests can be around 3 feet in length and 1 inch in diameter. Ravens place their nests in a variety of natural and developed settings. Raven nests are easily confused with bald eagle nests when located on cell towers, transmission towers, or in trees. When situated in trees, these nests are usually in the upper portion of the tree in a crotch of the main tree stem. The best means of telling raven and bald eagle nests apart are likely size and shape; raven nests are noted for occasionally being asymmetric, and even at their larger sizes, they still tend to be smaller than bald eagle nests.

Great Horned Owl

In addition to nesting in tree cavities, great horned owls also frequently use the former nests of other animals, including squirrels, ravens, crows, and herons. The size and nature of a great horned owl nest therefore depends on the nest's original creator. Red-tailed hawk may be the most common source of nests for great horned owls in the Northeast. However, great horned owls will also occasionally take over bald eagle nests.

Heron

Hérons nest in colonies known as "rookeries" where many nests are present; individual heron nests are rare. Multiple nests can be present in one tree and some nests may be located relatively high up or far out on branches. Nest sites are usually near water. Heron nests are mainly composed of sticks, and are flat and broad, often resembling a thin platform. Nests used for several years may grow taller and wider. Heron nests can give off a general impression of messiness or flimsiness.

Squirrel

Squirrel nests can reach basketball size or larger. They are distinguished from bird nests mainly by their materials, which include leaves and other soft vegetation material (e.g., grasses), and very few sticks. They are usually round shaped, and often look messy.

Legal definitions and protections for eagle and migratory bird nests.

Eagle Nests

BGEPA protects eagle nests in same manner it protects eagles; they cannot be destroyed, possessed, or relocated without a permit from the Service, which the Service only provides under a limited set of circumstances. Regulation defines an eagle nest as "any assemblage of materials built, maintained, or used by bald eagles or golden eagles for the purpose of reproduction" (50 CFR 22.3). A nest is an eagle nest if it was built by or ever used by eagles, even if other species of birds played a role in the nest's history. For example, if osprey build a nest and eagles take that nest over, legally, the nest is an eagle nest. Alternatively, if great horned owls begin to use a nest originally built by eagles, that nest remains an eagle nest for as long as it exists. An eagle nest also retains protection regardless of where it was built, whether it was ever finished or successful, or when it was last used. Additionally, BGEPA's protections apply regardless of the nest's size and condition.

Migratory Bird Nests

The Migratory Bird Treaty Act (MBTA) protects migratory bird nests in the many of the same ways that BGEPA protects eagle nests. Unless a permit is in place, migratory bird nests cannot be possessed or relocated at any time or intentionally destroyed while active. One notable difference between MBTA and BGEPA is MBTA's standard on inactive nests. If a migratory bird nest is inactive, meaning it does not contain viable eggs or chicks, it can be destroyed without a permit. (Note: the

APPENDIX C

terms 'active' and 'inactive' here are different from the 'in-use' and 'alternate' standards used for eagle nests [see Appendix E for definitions].) For more information, please read the Service's [2018 Nest Destruction Memo](#). Bird species protected under MBTA are listed under regulation at 50 CFR 10.13. Additional protections not described here apply to any migratory bird species listed under the Endangered Species Act. Tribal, state, and local laws may also place greater restrictions on the destruction of migratory bird nests.

APPENDIX D

Similar Activity Example Exercise

What is the purpose of this appendix? This appendix provides project screening form users with an example of how to assess the similarity between two activities. By reading through this example, landowners and project proponents can develop a better sense of what factors they should consider when answering the question of whether their activity is similar to an ongoing or previous activity tolerated by eagles.

In the example scenario, a proposed residential construction project is compared to previous farming activity. The example starts with an overview of the historic farming activity, nest, and proposed project; then goes through a full assessment, set up in table format; and finally closes with a summary of the determination and explanation of how that determination would influence completion of the form.

What is the scenario?Previous/Existing Activities

The project site is a large agricultural field that was farmed nearly every year for the past two decades. Human activity at the site was limited to occasional operation of heavy farm equipment. The broader area out to one mile includes other agricultural fields and medium density residential and commercial development.

Nest Location & History

Five years ago, a pair of bald eagles constructed a nest in a cottonwood located in the hedgerow bordering the agricultural field. The pair were unsuccessful in their first year, but fledged young from the nest each of the following four years up to present. Workers observed that the pair did not respond to operation of farming equipment, but became vigilant whenever an equipment operator stepped outside their vehicle.

Project Narrative

The proposed project will convert portions of the existing agricultural field to a residential development with 30 single-family homes, which places it under the screening form's Construction and Development category. Construction will require extending water, sewage, and electrical utilities and adding a small network of residential streets. Preparing each lot will involve grading, home and driveway construction, and landscaping. Ten acres of property near the nest will be signed over as a conservation easement.

APPENDIX D

Factor	Previous/Existing Activity: Farming	Proposed Activity: Construction	Similar?
NATURE	Heavy equipment preparing field, planting, and harvesting crop. Two-three workers, generally confined to closed cab tractors.	Twenty workers either in heavy equipment or on foot. Ground disturbance. Placement/extension of utilities. Landscaping. Construction of 20 homes.	No
HISTORY	Farming activity predated nesting and continued while eagles successfully fledged young from the nest. This success demonstrates the eagles tolerated the farming.	N/A	Yes
DISTANCE	Distance between farming activity and the nest tree was essentially 0 feet; the hedgerow in which the nest is located bounds the agricultural field.	Nearest lot boundary will be 400 feet from nest. Area between home and nest will be converted conservation easement and left in passive, natural state.	Yes
TIMING	Farming activity began in March and continued through October each year.	Proposed schedule is April through October.	Yes
DURATION	The field was generally worked for one to two days at time, from sunrise to sundown.	On days of construction activity, work will occur during standard business hours.	Yes
FREQUENCY	Intermittent. Farming occurred in stages (e.g., fertilizing, plowing, harvesting) and events were often separated by weeks or months.	Continuous. Work will occur most weekdays and occasionally on weekends.	No
NOISE	Farming equipment (e.g., tractor) generated loud noises within the range of 80 – 100 decibels.	Construction will not require blasting or pile driving. Construction equipment (e.g., backhoes) will generate loud noise within the range of 80 – 95 decibels.	Yes
VISIBILITY	High. Because the field was flat and there was no vegetation other than the hedgerow, practically all farming activity was visible to the nest.	High. There will be no topography or vegetation screening view of construction. Visibility will only begin to lower once exterior walls are put up.	Yes

Final Assessment & Conclusion

The proposed construction activity is different from the historic farming activity in general nature and frequency. Construction will require more workers and more equipment, operating at greater intensity and higher frequency. Because of these differences, the construction cannot be considered similar to the historic farming activity, and it cannot be assumed that the breeding pair will tolerate the activity. Avoidance measures will be necessary to reduce the likelihood of disturbing the nest.

Having made these conclusions, the form user would mark 'No' to the question on page 5 of whether the activity was similar to an ongoing or previous activity. Then, at the next question the user would mark 'Yes' because the project would be visible to nest over the open intervening space. At that point, the form would direct them to implement AMs 2, 4, and 5. The project design, as proposed, would not meet AM 2, the 660-foot buffer. The user's options then would be to revise the project to eliminate the portions within 660 feet of the nest and sign the self-certification, or check no on the commitment to follow all recommended AMs and seek further guidance.

APPENDIX E

Limitations of This Form

This project screening form is not a permit or authorization to disturb bald eagles. It does not free you from legal liability under BGEPA. Rather, this form provides instruction on how to minimize the legal risk of disturbing nesting bald eagles.

The effectiveness of this form depends on the accuracy and completeness of your answers and your compliance with the avoidance measures. Using this form inappropriately may put you at risk of disturbing nesting bald eagles and violating BGEPA.

This form's recommendations are specific to the Northeast and may not be effective outside this region. If your project is in another area of the U.S., do not use this form. Instead, consult with your regional eagle biologist or migratory bird permit office for guidance matched to your locality.

This form only relates to managing activities near bald eagle nests. It does not provide direction on how to avoid disturbing bald eagle communal roosts and concentration areas, which, compared to nest sites, have different biological significance to eagles and present different sets of concerns. If you believe your activities have any potential to affect a communal roost or concentration area, consult the [Guidelines](#) document for guidance.

Conditions such as the location and existence of nests and surrounding habitat are subject to change between years. For this reason, the Service recommends revisiting your determinations every breeding season after completing this form until your project is complete. The more time that passes between when you complete this form and when you end your activities, the more likely it is that conditions will change enough that your original determinations no longer apply.

This form only addresses nesting bald eagles. To identify other USFWS-managed resources and suggested conservation measures for your project, go to <https://ecos.fws.gov/ipac/>.

Wind energy developers seeking to address potential take of eagles should use this form in conjunction with the Service's [Eagle Conservation Plan Guidance](#). Use of this form alone will not assure wind projects' compliance with BGEPA's protections on disturbance or other take.

Certain states and localities have their own laws, regulations, and guidelines for protecting bald eagles and their nests. Completing this form does not guarantee that you are also in compliance with these other standards and/or regulations. If you are unfamiliar with your state and local standards, consult with the appropriate agencies and authorities.

You are responsible for ensuring that your activities comply with all applicable Federal, tribal, State, and local laws and regulations. This form will only help you in your compliance with BGEPA and its protections on the nesting activity of bald eagles.

APPENDIX F

Glossary of Terms

Alternate nest – one of potentially several nests within a nesting territory that is not an in-use nest at the current time. When there is no in-use nest, all nests in the territory are alternate nests. Also sometimes referred to as an inactive nest (e.g., in the Service’s 2009 Eagle Rule).

Communal roost – an area where eagles gather repeatedly in the course of a season and shelter overnight and sometimes during the day in the event of inclement weather.

Disturb – to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior.

In addition to immediate impacts, this definition also covers impacts that result from human-caused alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle’s return, such alterations agitate or bother an eagle to a degree that injures an eagle or substantially interferes with normal breeding, feeding, or sheltering habits and causes, or is likely to cause, a loss of productivity or nest abandonment.

Eagle nest – any assemblage of materials built, maintained, or used by bald eagles or golden eagles for the purpose of reproduction.

Fledge – to leave the nest and begin flying. For bald eagles, this normally occurs at 10-12 weeks of age.

In-use nest – a bald or golden eagle nest characterized by the presence of one or more eggs, dependent young, or adult eagles on the nest in the past 10 days during the breeding season. Also sometimes referred to as an active nest.

Landscape buffer – a natural or human-made landscape feature that screens eagles from human activity (e.g., strip of trees, hill, cliff, berm, sound wall).

Nest abandonment – nest abandonment occurs when adult eagles desert or stop attending a nest and do not subsequently return and successfully raise young in that nest for the duration of a breeding season. Nest abandonment can be caused by altering habitat near a nest, even if the

alteration occurs prior to the breeding season. Whether the eagles migrate during the non-breeding season, or remain in the area throughout the non-breeding season, nest abandonment can occur at any point between the time the eagles return to the nesting site for the breeding season and the time when all progeny from the breeding season have dispersed.

Nesting territory – the area that contains one or more eagle nests within the home range of a mated pair of eagles, regardless of whether such nests were built by the current resident pair.

Northeast – Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, and the District of Columbia.

Project footprint – the area of land (and water) temporarily or permanently altered by a project.

Tolerate – the acceptance of specific human activities by eagles at the nest site. Demonstrated in the eagles' continued ability to successfully feed, breed, and shelter, and the general absence of stress or agitation in their behavior.
