MEMO TO: Michael Schiliro, Supervisor
& Town Board Members

FROM: Jane Black, Co-Chair
John Krupa, Co-Chairman
Conservation Board

RE: Airport Campus
DEIS- Comments

Comment 3-2 In response to a referral from the Town Board, the Conservation Board offers the following comments to address the Board's concerns regarding the Airport Campus proposal as presented in the DEIS. We are particularly concerned with the proposal's density, which we believe is greater than the site can handle environmentally. A second significant concern is with the project's height; the visual impact of a seven story apartment building is not in keeping with the character of our town. The building's height is too great to be successfully mitigated by the landscaped berm along King Street and any additional tree planting. Additionally, we are concerned with the removal of approximately 6 acres of woodland and 368 trees and the resultant impact in wildlife and open space. While the Board recognizes a need to modify the zoning due to vacancies in office space on the site and in the area, we are unanimous in our belief that the proposed density and visual impact of the project are not beneficial to the town. As the Westchester County Planning Board states in its initial review of the project: "we must also acknowledge that the strategy of placing large amounts of new development in relatively remote locations runs counter to the County Planning Board's long-range planning policies ... which call for directing growth towards existing downtown centers." The intense amount of residential development will lead to more car trips to obtain services and a resultant negative effect on the local environment.

Comment 11-2

Comment 6-4

Wetlands

As reported in the DEIS, there is minimal wetland impact caused by this project. There is a 0.25 acre wetland area in the Southwest corner of the project site. The 100 foot wetland buffer area associated with this 0.25 acre wetland covers approximately 1.8 acres within the project site. The present plan calls for no direct disturbance of the wetland itself and minor disturbance in the buffer area. The disturbance in the buffer area is identified as an "Emergency Gravel Access Drive" which is noted to result in 0.19 acres of disturbance.

Comment 7-2

The Conservation Board request is that a Wetland Permit for this disturbance is sought in accordance with Town requirements and a plan with details for 2-1 mitigation be submitted to the Conservation Board for review, comment and ultimate approval.

Visual Resources and Community Character

Comment 11-2

As stated in the June 23, 2021, DEIS and DGEIS (I.D.11, pg. 1-23, 1-24), "It is noted that the Lead Agency [North Castle Town Board] is not expressing an opinion on the applicant's visibility analysis at this time nor is it presenting its opinion on whether or not the Proposed Action would have a significant adverse visual impact". The North Castle Conservation Board unequivocally believes that the Proposed Action will have a significant adverse visual impact, for the Proposed Action neither complements nor represents the aesthetic and community character of the Town of North Castle. The Conservation Board also believes that the applicant has underplayed the visual impact that this Proposed Action will have.

According to the applicant, "From south... [the Proposed Action will be] moderately visible during leaf-off condition" and, also, "The views that are available would only be visible for a few seconds while driving along King Street". As that the Proposed Action will be sited on a rise in the topography and as that no trees on the property will be as tall as the height of the Proposed Action, these assertions seem improbable, and the Conservation Board challenges these assertions (the applicant's own 3D renderings seem to contradict these statements as well). The Conservation Board recommends that the Town Board insist on more studies as to the visual impact of the Proposed Action, perhaps including the flying of balloons at the height of the proposed construction (even in leaf-on conditions).

The applicant also states that "[The Proposed Action] is proposed to minimize and mitigate potential visual impacts... The new multi-family building and town homes would be designed to approximately relate to the character of the area". As that the Town of North Castle has no buildings as tall as what is being proposed, it is impossible that such buildings are in the "character of the area". The Conservation Board recommends the Lead Agency seek the advice of the North Castle Architectural Review Board (the Board which most often determines if a building is in character with others in the community), instead of accepting the applicant's opinion as fact.

Many residents of North Castle have fled the skyscrapers of New York City to plant roots in this bucolic community. The Town Board of North Castle has a responsibility to its residents to keep North Castle the serene, suburban setting that we know it to be, and to not let fall the first domino of tall, unsightly buildings. If this project were to move forward as proposed, our community character and visual resources will be forevermore, irrevocably changed for the worse.

History

North Castle has a long and storied history. Siwanoy People (one of the largest subdivision of Wappinger People) thrived in this area for at least 3,000 years. (Maybe as many as 10,000 years). European settlers have been here for nearly 400 years having "purchased" this land from its native inhabitants on several occasions, starting in 1640. For hundreds of years there have been Native American artifacts uncovered in Armonk, and several museums have sent specialists specifically to this area to study the native inhabitants way of life-one of the most notable being the American Museum of Natural History in 1900-1901. Since the departure of Native Americans, much significant history has happened here. In, at least one amateurs historian's opinion, it could even be the place where Revolutionary War started to turn in the favor of the Patriots, for this was the final point the Americans were pushed before the English refused to pursue the rebels into the easily defended highlands of North Castle. The British retreated and Americans pursued them- all the way across the Delaware River. After crossing the Delaware, things finally started going better for George Washington and the rest as they say is "history".

Comment 14-1

History is more delicate than you'd think; it's often easily forgotten. "Based on available information, this project [Airport Campus] is in a archaeologically sensitive area" states Philip Parazio of New York State Parks, Recreation and Historic Preservation in a memo sent to the North Castle Town Board on September 26, 2018. In this memo, he recommends "A 36 CFR 61 qualified archeologist should be retained to undertake the Phase 1 survey." The Conservation Board is aware that a Survey "1A" was undertaken. We believe that more studies are necessary ("1B") before moving forward with this project.

In the "Full Environmental Assessment Form" (part of the SEQR review), section 10, the following items were checked off by the Lead Agency (North Castle Town Board).

In Section 10- "The Proposed Action may occur in or adjacent to a historic or archaeological resource" - The answer: "YES".

In Section 10B- "The Proposed Action may occur wholly or partially within, or substantially contiguous to, an area designated as sensitive for archeological sites in the New York State Historic Preservation Office (SHPO) archeological site inventory". Answer: "Moderate to large impact may occur".

Comment 14-1

Given the Town Board recognizes the historical significance of the site; the Conservation Board recommends that all appropriate studies and actions have been taken for the correct archeological handling of this site. The Conservation Board would like the Town Board to take action to preserve and protect archaeologically important sites within the Town of North Castle. "A nation that forgets its past has no future"- Winston Churchill.

Vegetation and Wildlife

Comment 6-2 The applicant states that approximately 6 acres, or 28 percent, of mixed upland forest/field cover would be removed. The applicant contends that this removal would not have an adverse environmental impact due to the low quality of the existing habitat.

Comment 6-5 However, the Conservation Board sees this as a substantial disturbance that, combined with the density and visibility of the project, will negatively impact the environment. The applicant also proposes removing 368 trees. Although the applicant proposes planting 451 new trees, the scientific community argues that the preservation of existing mature trees plays a vital role in combating climate change. A less dense project with a smaller amount of tree removal would be beneficial to the environment. In addition, the Conservation Board would like to see that any approved project site plan disallow the use of fertilizers, pesticides and fungicides.

Comment 6-6

Comment 6-8 It was noted in the DEIS that the direct and indirect disturbances to vegetation, wildlife, and the environmental impacts due to the significant loss of trees are still unknown. Impacts to high-quality habitat for wildlife, specifically the Indiana bat, Northern long-eared bat and bald eagle to name a few, have been identified as areas of concern, as these have been listed as the threatened or endangered species in this area of the Kensico waterways.

Noise

The Town of North Castle Noise Control Law, Chapter 210 of the Municipal Code of North Castle, prevents "any loud, unnecessary or unusual noise or any noise which annoys, disturbs, injures or endangers the comfort, repose, health, peace or safety of others within the Town of North Castle., New York".

New York State Department of Environmental Conservation NYSDEC has published a policy and guidance document, Assessing and Mitigating Noise Impacts (DEP-001-1, February 2, 2001), which presents noise impact assessment methods, identifies thresholds for significant impacts, and discusses potential avoidance and mitigative measures to reduce or eliminate noise impacts.

New York State Department of Environmental Conservation guidance document sets forth thresholds that can be used in determining whether noise increases due to a project may constitute a significant adverse impact, noting that these thresholds should be viewed as guidelines subject to adjustment as appropriate for the specific circumstances.

Given historic use of the property, occupied for many years by MBIA and the private homes on the northern section of the property, the proposed development on the site is consistent with prior usage.

Comment 16-1

The Conservation Board's concern with noise is less about the noise generated by the new development than about the impact of existing airport noise on the residences, particularly the proposed seven story apartment building. Any development adjacent to an airport – especially a mixed-development project like this that is subject to constant air traffic noise- begs heightened scrutiny by the reviewing Boards.

FYI: The BelleFair housing development community in Rye Brook, NY experienced noise issues (private residential units) and widespread complaints that contributed to the creation of consumer protection case law in New York State brought forward by the former Attorney General Robert Abrams (1979-1993). These heightened building code standards for noise mitigation, pertaining to residential unit sales offerings, should be reviewed for the purposed of consumer protection of future buyers of new private homes on the Airport Campus development.

Water Usage

Based on the Conservation Board's review and understanding of the available background material related to water usage and supply, we do not believe that the proposed project can proceed as currently proposed. In particular, the Conservation Board believes that this project cannot proceed until:

Comment 9-1

- It has been conclusively determined that on-site wells can provide 100% of the water required for residential and commercial use, irrigation, and fire protection. This determination has not yet been made/completed, and/or.
- Plans are submitted, reviewed and approved for connecting this project to Town or other water sources. We do not believe that such plans have been submitted.

The Conservation Board's assessment of water/usage/supply is based largely on two memos submitted by Adam Kaufman, Town Planner, to the North Castle Town Board. Specifically".

- In his December 14, 2020, memo, Adam Kaufman noted that: "While numerous wells can be installed to meet the project withdrawal requirements, if groundwater recharge is not sufficient to meet the demand, the system will fall short of supplying the project. "In conclusion, the present water study is not sufficient to render a conclusion of safe water supply available."

, In his June 3, 2021, memo, Adam Kaufman noted that: "The present wells which were tested and designated for permanent development are not anticipated to be sufficient to supply the proposed project." And, while Mr. Kaufman's memo continued by stating that "The report, however, recommends mitigating the shortfall by drilling an additional well on-site in the future: we are not aware that testing for these additional wells have been completed.

Comment 9-1
(cont'd)

Until the applicant can assure the Conservation Board and the Town Board that an adequate supply of water will be available, we do not believe that this project as currently proposed can proceed.

Air Quality

Based on the Conservation Board's review and understanding of the available background material related to air quality, we do not believe that the proposed project can proceed in its current form. In particular, in section 1.D.1 5. of the DEIS, the applicant indicates that the proposed project:

"It has the potential to impact ambient air quality from stationary sources (i.e., fossil fuel-fired HVAC equipment) and from mobile sources (i.e., traffic generated by the Proposed Project)."

And the applicant continues:

"It is the applicant's opinion that there would be no potential for significant adverse air quality impacts from the emission of nitrogen dioxide, sulfur dioxide, and particulate matter in connection with the Proposed Projects HVAC systems."

The applicant further continues by explaining that:

"In addition to air quality impacts generated by stationary sources, the Proposed Project would result in Project-generated traffic that would affect traffic conditions within the area of the site."

Related to traffic-related pollution, the applicant concludes by stating that, based on several analyses that they had completed:

"It is the applicant's opinion that Project-generated traffic would not result in a significant air quality impact."

Until the applicant can provide the Conservation Board with an independent, professional evaluation of the proposed project's impact on air quality (i.e., an assessment that is not based on the applicant's opinion), the Conservation Board does not believe that this project can proceed.

Runoff on Kensico Waterways

Given its immediate proximity to a major source of drinking water for Westchester County and New York City, the concern for wetland protection and the capture and treatment of water runoff are two of many concerns regarding this project.

Comment 15-1

The proposed disturbance to the Airport Campns is among the most intensive land-use proposals ever to come before the Town of North Castle. Even the significant impact and disturbance of the nearby Swiss Re parcel pales in our opinion.

The proposed usage of the site, with a significantly greater proposed footprint to expand what is now existing office building to also include a hotel, multi-family and a single-family residential proposed development, warrants continued study.

Members of the North Castle Conservation Board look forward to a site walk accompanied by aligned as well as independent experts to review the proposed development in greater detail.

Areas of Concern Include (but not limited to):

- Potential impacts from site clearing activities, including tree removal and remediation plans .
- Maximum residential buildout potential for the project for the project site and its resultant impacts and disturbances .
- Buffers to neighboring properties and the on-site wetland and conservation easement area.
- Subject to review and concurrence: The Town of North Castle regulates a 100-foot wetland adjacent area buffer resulting in approximately 1.81 acres of Town-regulated buffer on the Project Site. The total wetland and buffer area on the Project Site is 2.06 acres (5.4 percent of the site) .
- Sedimentation disturbance within the 100-foot buffer area described above would occur in a previously disturbed area approximately 70 feet from the delineated wetland boundary.
- Increased chemical concentrations, including fertilizer and pesticide use, assumes safe applications when applied in accordance with manufactures guidelines. This raises issues and concerns due to the multiple tenancy and ownership entities of the proposed project.
- It was noted that no specific proposal is being made at this time to effectuate the "maximum hypothetical development" of "the sites" in question.

Trees/Plantings & Pesticides, Insecticides and Fungicides

This proposed project is one of the most ambitious projects the Town of North Castle has ever experienced. If approved and built to completion, it will have huge impact, not only on the surrounding environment, but the Town of North Castle and the Byram Hills School District.

Comment 6-6

The following comments examine the proposed preliminary landscape plan, including the use of related materials and procedures along with some recommendations and suggestions. The focus of this report is not to highlight the negative impacts of the project but to encourage the applicant to focus on environmentally favorable planning. As extensive as this project is, with potentially negative environmental effects, it can also produce some positive effects.

The planet is warming. There are more extreme weather events. Animal, plant, bird, and insects are disappearing. Most of us have experienced and have seen these changes.

The largest water consuming "crop" is not corn or soybeans. It is turfgrass. By reducing the area of the turf, and planting more native trees, shrubs, and flowering plants, the positive impact is multifaceted. First, less water for turf means more available water for other purposes, including wildlife. Fewer chemicals such as fertilizers, herbicides, pesticides, and fungicides will be used. Less need for gas powered lawn care equipment means less gas, less exhaust, (air pollution), and less noise (pollution). Less turf reduces maintenance mowing, thatching, aerifying, and that in turn lowers labor costs for the property owner. This will also reduce chemical applications on the turf, reducing the possibility of chemicals leaching into the wells and possibly the reservoir.

A reduced grass area gives the property owner the opportunity to increase the size of planting beds, creating "islands" of trees, shrubs, and perennials beyond what is proposed. The proposed tree rows can be enhanced with a more diverse variety of native trees, shrubs, and perennials. The increased plantings can provide shade, impede soil erosion, aid water absorption and retention, inhibit excessive runoff and flooding, enhance air quality, provide a natural habitat for wildlife, and add to the aesthetic quality of the property. Once established, rooted and growing, these plantings require very little care. Trimming, deadheading, feeding, etc. generally are done two to three times per year, depending upon the species, and are far less costly than regular turf maintenance. The cost of these added plantings would be off-set multi-fold, over time, by the reduced costs of turf maintenance.

Suggestions of varieties of native trees and shrubs include common names: shadbush, American holly, sweetbay magnolia, chokecherry, viburnum (some varieties), chokeberry, sweetspire, buttonbush, summersweet, arctic fire red, and arctic fire yellow dogwood, red rover dogwood, bottlebrush, inkberry, winterberry, sweetspire, blueberry, juniper, mountain laurel, ninebark, beach plum, and rosebay rhododendron. There is also an extensive variety of native ferns, ornamental grasses and flowering perennials.

In Chapter 6, Part D- Mitigation Measures for the proposed project (DEIS), it is stated "The applicant's schematic landscaping plan includes retaining and revegetating areas within the development with native species". Detailed in the preliminary landscape plan/schedule are four (4) plant species that are NOT native; Rutgers dogwood, sycamore, white fir, and Colorado blue spruce.

Comment 6-5

The preliminary landscape plan also proposes a "thick" concentration of plantings of evergreens and some deciduous trees along the King Street border of the property, primarily for screening and noise mitigation.

Comment 6-5 (cont'd) Calculating the median, mature width of the proposed trees to be planted along the King Street wall, i.e., the trees proposed to be planted next to each other, is over 1,300 linear feet. The distance between the corner of Cooney Hill Road and to the approximate end of the planting is less than 1,000 feet.

Including the trees that are proposed in the staggered row behind the "front" row, these plantings will grow into each other, crowding each other's growth and preventing them from reaching their mature size and aesthetic beauty.

Comment 6-6 Another proposed project mitigation measure is stated: "Elimination and Minimization of Fertilizer, Pesticide, Herbicide, Fungicide and other chemical concentrations through avoidance and containment, respectively". The Board requests that the Applicant define and detail what is being eliminated, including where, on what, and what the applied alternatives are, if any. Even if the property owner adheres to the minimal use of chemicals, the usage must be recorded. Included in the record should be what is used, what it is used for, what is it used on, how much is used, when is it applied, and who applied it.

The use of organic fertilizers, pesticides, and fungicides on vegetation is a strongly recommended alternative to chemicals. Herbicides are a different story. Chemical herbicides are far more effective. However, the Board does not support the use of Glyphosate based herbicides (aka round-up).

Comment 6-3 Referring to the six (6) acres of vegetation to be removed for new construction, the Board would like to see a list of removed plants when the project reaches site plan stage. All Tree of Heaven plants should be removed.

Comment 8-3 The Conservation Board also recommends replacing all the proposed concrete walkways with pervious materials.

In closing, the Conservation Board would like to emphasize our concerns, particularly with the height, density, and visual impact of the proposed project in its current form. While we acknowledge the necessity of rezoning and redeveloping the former MBIA site, we respectfully request the Town Board, as Lead Agency, scale back the height and density of the proposed project to lessen the environmental impacts of this very large development on the Town of North Castle and the relatively small hamlet of Armonk.

JB/JK/JAM

cc:Roland Baroni, Esq.	Alison Simon, Town Clerk
Adam Kaufman, Town Planner	Kerri Kazak, Open Space Chair
John Kellard, Kellard Sessions Consulting	Conservation Board

MEMORANDUM

TO: North Castle Town Board

CC: North Castle Planning Board

FROM: Joseph M. Cermele, P.E., CFM 
John Kellard, P.E. 
Kellard Sessions Consulting
Consulting Town Engineers

DATE: October 27, 2021

RE: DGEIS Review
Airport Campus
113 King Street

As requested, Kellard Sessions Consulting has reviewed the DEIS and plans submitted in conjunction with the above-referenced project. The applicant is proposing to redevelop a 38-acre parcel by redeveloping the northernmost existing office building into a hotel, the construction of a new, 5-story, 149-unit, multi-family building with a parking garage, the construction of 22 townhouse units and the reoccupation of the southernmost existing office building with office tenants. The 38-acre property is located in the Designated Office Business 20A (DOB-20A) Zoning District. The applicant has petitioned the Town Board for text amendments to the provisions of the DOB-20A Zoning Ordinance to permit residential and hotel uses via Special Permit.

Our comments are outlined below.

Chapter 8: Stormwater

Appendix E-1 Preliminary Stormwater Pollution Prevention Plan

Appendix E-2 Erosion and Sediment Control Plan

- Comment 8-1**
- The project site is situated within the Kensico Reservoir Basin, a New York City Watershed area. As such, the project will be required to comply with regulations from the NYCDEP, NYSDEC and the Town of North Castle. The NYCDEP has acknowledged the prior approval of the Stormwater Pollution Prevention Plan (SWPPP) issued in June 2005 and has compared the prior approved plan to the current proposal. The NYCDEP has indicated that the project will be reviewed as an amendment to the original approval, requiring that all newly proposed impervious surfaces be captured and treated and receive appropriate runoff reduction. The appliance will be required to

**Comment 8-1
(cont'd)**

revise the plans and SWPPP as may be needed, to obtain the amended approval. In addition to approval by the NYCDEP, the plan will require coverage under the NYSDEC SPDES General Permit, GP-0-20-001, for Stormwater Discharges from Construction Activity as well as demonstrate compliance with Chapter 267, Stormwater Management of the Town Code. The owner will be required to file a Notice of Intent (NOI) with the NYSDEC to obtain the above-mentioned General Permit. The SWPPP should include a draft copy of the NOI for review.

2. As part of the stormwater management system, the SWPPP proposes the use of several approved stormwater practices and green infrastructure practices to provide quality and quantity controls including vegetated swales, several bioretention areas, a wet pond, an extended detention basin, green roof, permeable pavers and infiltration systems with hydrodynamic separators for pre-treatment.

Comment 8-21

- a. The plans should include planting plans for each of the vegetated stormwater treatment systems including species, size and quantities of each planting material.

Comment 8-22

- b. The plans should include construction details and cross-sections of the various practices, as appropriate, to support the provided sizing calculations and demonstrate compliance with the design guidelines and specifications.

Chapter 9: Utilities

Appendix F-1: 72 Hour Pumping Test Report

Appendix F-2: Sanitary Sewer Calculations

Water Supply:

Comment 9-1

1. Average daily water demand for the project is estimated to be 58,600 gpd. The estimate does not include irrigation supply which will be supplied from the on-site pond or fire supply which would be stored within tanks at the multi-family building.

Comment 9-1

NYS Regulations require that a well supply serving a water system be able to supply twice the average daily demand with the best producing well out of service. Water supply for the project is proposed from four (4) existing on-site wells (Wells 3, 6, 7 and 8), which range between 620 – 760 feet deep. The applicant performed a 72-hour pump test of the four (4) on-site wells servicing the project. The combined well yield of the test was 108.5 gpm, however, with the best well out of service, the combined yield of the remaining wells is 68.5 gpm or 98,640 gpd. The proposed project requires a combined yield of 117,200 gpd (58,600 gpd x 2 = 117,200 gpd). A deficit of 18,560 gpd or 12.9 gpm.

Comment 9-1 The applicant notes within the report two (2) options available to obtain the required supply. Should the project be approved as presently proposed, the applicant will need to develop and test the additional supply.

Comment 9-1 2. Laboratory results of water quality testing of the four (4) proposed supply wells for the project have not yet been provided.

Comment 9-5 3. The DGEIS estimates the total water supply to service full development of all rezoned parcels to be 146,300 gpd. This would require the development of 292,600 gpd of well supply with the best wells on each parcel not included. The ability of the rezoned parcels to support the required supply for the complete district has not been analyzed within the report.

Comment 9-1 4. Although pumping tests were performed for the on-site wells, it is important to understand whether the aquifer can be replenished during drought conditions at a rate which can support the project, as well as support the rezoned parcels.

Comment 9-5 The April 5, 2021 submission of the Draft EIS included an evaluation of the aquifer. The watershed utilized within the applicant's evaluation did not follow the surface contours of the area and appeared significantly larger than our estimate. The applicant noted their evaluation included a combination of analytical tools useful for water resource planning. Our comments at that time requested that the applicant provide the backup data to support their assessment. Instead of providing the requested data, the aquifer evaluation was removed for the report.

The previous report expanded the watershed to 282.2 acres encompassing portions of the reservoir, lands down gradient of the project site and portions of Citigroup and Swiss Re properties. The report estimated a drought year recharge of 118,740 gpd well below the 146,300 gpd required for all parcels included within the rezoning, a 27,560 gpd deficit. The applicant should substantiate the recharge expected at the project site and also the expected recharge for the proposed rezoned parcels.

Sanitary Sewer:

Comment 9-3 1. The applicant has examined the existing sanitary sewer infrastructure servicing the project site and parcels to be rezoned. Wastewater demand was estimated and utilized in determination of the necessary improvements to the existing sanitary sewer infrastructure. The study reveals that no modifications are required to the Town or County collection system or force mains to service the project.

**Comment 9-3
(cont'd)**

Pump Station #2 at King Street and #3 at New King Street will require upgrades to meet present Health Department regulations. Work would include modifications to the wet wells and new pumps at each pumping station.

2.

Average daily flows for office space were changed between the project calculations provided herein and the previous calculations within the Engineering Report used when the sewer system was originally approved and constructed. Previous values used a flow per square feet for office space while the new calculations use a flow per employee, resulting in significantly lower flow values. This is an acceptable method of determining average daily flows by the Health Department when the employee population can be pre-determined. The applicant also used a multiplier of 3.39 when converting average daily flow to peak hourly flows. The standard acceptable by the Health Department is 4.0. Peak flow values should be corrected.

3.

The daily flow report included within Appendix F-2 provides a total daily flow per day between 11/13/2018 – 12/6/2018 and includes the corresponding daily rainfall totals. It is evident from the report that flows are higher during periods of significant rainfall events. The applicant should examine inflow and infiltration of the existing system in an effort to reduce such unwanted flows. Such a study would be appropriate during the site plan review phase of the project.

Comment 9-4

As additional information becomes available, we will continue our review. It is noted that an itemized response to all comments will facilitate completeness and efficiency of review.

DOCUMENTS REVIEWED, PREPARED BY AKRF, DATED SEPTEMBER 30, 2021:

- Draft Environmental Impact Statement (DEIS) & Draft Generic Environmental Impact Statement (DGEIS) Report and Appendices

County Planning Board Referral File NOC 21-007 – Airport Campus, 113 King Street
Zoning Text Amendment and Site Plan Approval
Draft Generic Environmental Impact Statement and Draft Environmental Impact Statement

Dear Mr. Kaufman:

The Westchester County Planning Board has received a draft generic environmental impact statement (DGEIS) (dated June 24, 2021) related to a petition to amend the text of the North Castle Zoning Ordinance to permit hotel and residential uses by special permit in the Designed Office Business - DOB-20A zoning district, subject to certain requirements. In particular, hotel uses would be permitted only through the conversion of existing office space. Residential uses would be permitted through the conversion of existing office space at a ratio of 1 square foot to 1 square foot. Residential uses would also be permitted through the conversion of unbuilt allocations of office spaces that have a site plan approved by the Town at a ratio of 1 square foot of office to 1.25 square feet of residential. In addition, medical office is also proposed to be added as a principal permitted use in this district.

The submitted materials also include a draft environmental impact statement (DEIS) (dated June 24, 2021) that is specific to the redevelopment of the 38-acre former MBIA campus located at 113 King Street (NYS Route 120) (SBLs 118.02-1-1 and 113.04-1-13 and 14) which would require site plan and special permit approvals if the new zoning regulations are approved. The proposed development program for this site includes:

- Conversion of a 161,000 square foot office building into a 125-room hotel
- Construction of a new five-story, 149-unit multi-family building with 331 structured parking spaces
- Construction of 22 townhouses
- Continuation of an existing 100,000 square foot office building to be marketed to office tenants
- Affordable affirmatively furthering fair housing (AFFH) units would be provided in accordance with existing zoning.

The MBIA site currently has existing site plan approvals in place to allow for the construction of an additional 165,000 square feet of office space, 53,000 square feet of amenity space, a 20,000 square foot meeting house and a 1,000 space parking structure on the site. The proposed application would replace these previously approved plans.

We have reviewed this matter under the provisions of Section 239 L, M and N of the General Municipal Law and Section 277.61 of the County Administrative Code and we have the following comments:

1. Recommendation for disapproval of residential development.

While the County Planning Board is generally supportive of the redevelopment of vacant office campuses with non-office uses, the subject site is not suitable for residential development. While the continuation of office space on the site along with a hotel use may be acceptable for this property, we recommend the Town not approve residential uses on this site for the following reasons:

a. Proximity to Westchester County Airport

Comment 16-1

We disagree with the DEIS's conclusion that airport-related noise will not be an issue for the future residents who would live on this site. While the DEIS references noise contours to make this assessment, we point out that the contours were developed in 1999 and 2005 and have yet to be updated. The County is undertaking a new Airport Master Plan which will contain a new series of contours. This master planning effort has also called attention to the large number of noise complaints the County already receives from residents in Purchase and Armonk. In light of these ongoing findings, we are opposed to the construction of any full-time residential uses this close to the Airport, especially at this scale.

b. High-density residential uses in remote areas

Comment 3-2

The concept of placing large amounts of new development in relatively remote locations runs contrary to the County Planning Board's long-range planning policies set forth in *Westchester 2025—Context for County and Municipal Planning and Policies to Guide County Planning*, adopted by the Board on May 6, 2008, amended January 5, 2010, and its recommended strategies set forth in *Patterns for Westchester: The Land and the People*, adopted December 5, 1995, which call for directing growth towards existing downtown centers. In this case, the applicant is contemplating a five-story, 149-unit multi-family building. Typically, higher density apartment buildings of this size are placed closer to public transit, shopping, and services so that more people can avail themselves of the shorter traveling distances. Placing multi-family buildings in low-density areas further from services would necessitate that more people would have to make longer automobile trips for all of their daily needs. The 331 parking spaces that the applicant proposes (more than two spaces per apartment unit) provides an insight into the scale of this automobile dependency.

c. Traffic and parking impacts

Comment 10-15

The DEIS acknowledges that the placement of a high-density apartment building in this isolated location could add to cumulative traffic and parking impacts in the Armonk hamlet. While the DEIS discusses a potential community benefit agreement that could assist with the construction of more parking in the hamlet, a better solution would be for the Town to focus on creating more residential development that is walkable to the Armonk hamlet.

Comment 8-2

The Wampus River and the Byram River are both County streams that flow through the Armonk hamlet just north of their confluence. The County Planning Board and the County Department of Public Works and Transportation have consistently advised the Town against the overdevelopment of new impervious surfaces near these waterways which are prone to downstream flooding. As our region continues to experience more frequent and intense rain storms that have resulted from climate change, we are opposed to the concept of building more parking lots within this sensitive area to accommodate the parking demands created by irresponsible residential development.

2. Equitable and safe access for pedestrians and transit passengers.

Comment 10-13

We note that the site plan shows sidewalks and paths within the interior of the site, connecting the various buildings. However the site plan does not contain pedestrian connections between the site's buildings and King Street or Cooney Hill Road. Connections between the buildings and road frontages is an important consideration, especially due to the location of a Bee-Line bus stop located at the intersection of the site's driveway and King Street. The lack of a pedestrian connection along this driveway creates an unsafe and unequitable environment for those needing to access jobs or services on the site using Bee-Line buses. This will be especially problematic if medical offices are considered for the site since transit services are often used by patients seeking access to medical appointments. The Town should not approve the site plan for any mixed-use development on this site without this basic and essential form of access.

3. Bicycle mobility.

Comment 10-13

As new regulations are being considered for the DOB-20A district, we encourage the Town to consider the role of bicycle mobility in developments across all DOB-20A zoned sites and their proximity to the intersection of King Street and Route 22. Both roads are popular with cyclists, which is recognized by the Town's Comprehensive Plan which discusses a vision of a multi-use path along the Route 22 corridor. We recommend the proposed zoning amendments and site plan account for this and consider how bicycle mobility and access can be provided internally within each campus as well as beyond, with potential connections to adjacent properties that create a larger network of mobility that can include both King Street and Route 22. We point out that Plainsboro Township, New Jersey has had some successes with office campus conversions that have included new multi-use path segments that ultimately became part of a larger network. We encourage North Castle to think similarly about how the reinvention of these campuses can be leveraged to expand non-motorized transportation.

4. County sewer impacts.

Comment 9-4

While the DEIS includes a discussion regarding the need for nearby pump stations to be upgraded to current standards, the document did not include the reduction of inflow and infiltration (I&I) from the existing infrastructure as a mitigation measure to offset the increase in flow that the development would add to the Blind Brook Sewer District.

Comment 9-4
(cont'd)

The final EIS must include a discussion regarding the County Department of Environmental Facilities' policy requiring the applicant to identify mitigation measures that will offset the projected increase in flow through I&I at a ratio of three for one. In particular, the FEIS should provide specific details on how implementation of these improvements is to be accomplished. For example, will the applicant be required to place funds into a dedicated account for I&I work based on a per gallon cost of removal of flow through I&I? How will I&I projects be identified? Who will conduct the work and in what timeframe?

The County Planning Board further recommends that the Town implement a program that requires inspection of sewer laterals from private structures for leaks and illegal connections to the sewer system, such as from sump pumps. These private connections to the system have been found to be a significant source of avoidable flows. At a minimum, we encourage the Town to enact a requirement that a sewer lateral inspection be conducted at the time property ownership is transferred and any necessary corrective action be enforceable by the municipal building inspector.

5. NYS DOT review.

King Street (NYS Route 120) is a State highway. The Town should forward a copy of the application to NYS DOT to identify any required permits for the proposed project and to evaluate potential traffic impacts to King Street.

6. Kensico Reservoir protection.

The site is adjacent to the Kensico Reservoir. The proposed development will entail site disturbance during construction and will result in the creation of new impervious building and parking lot surfaces. Components of the site development may be subject to compliance with the New York City Department of Environmental Protection (NYC DEP) *Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and its Sources*, including the preparation of a Stormwater Pollution Prevention Plan. Therefore, erosion and sediment control and stormwater runoff water quality protection - both during and after construction - are of critical importance.

Comment 2-5

7. Recycling.

The applicant should verify that sufficient space will be available to store recyclables under the County recycling program which includes plastics numbered 1 through 7. County regulations for plastic recycling may be found at: <http://environment.westchestergov.com>. The Town should also be aware that Westchester County has reporting requirements for waste management for businesses with more than 100 employees.

Comment 2-6

8. Green building technology and electric vehicle parking.

We appreciate the applicant's proposed use of permeable pavement, and the extensive use of bioretention and other aboveground stormwater management techniques. We encourage the Town to work with the applicant to include as much further green or sustainable building technology into the development as

Draft Environmental Impact Statement and Draft Generic Environmental Impact Statement

September 28, 2021

Page 5

Comment 2-6
(cont'd)

possible. In addition, the Town and the applicant should give consideration towards the provision of electric vehicle parking capabilities as well as charging facilities for electric bicycles.

Please inform us of the Town's decision so that we can make it a part of the record.

Thank you for calling this matter to our attention.

Respectfully,
WESTCHESTER COUNTY PLANNING BOARD

Subject: Draft Environmental Impact Statement (DEIS) – Substantive Traffic Review – Airport Campus Redevelopment, 113 King Street, Armonk, New York

Dear Mr. Kaufman:

As requested, we have reviewed the Traffic and Transportation Section of the Draft Environmental Impact Statement (DEIS), Chapter 10 dated June 23, 2021 and Appendix G-1 (Traffic Impact Study) dated March 5, 2021, for Substantive Comments.

Project Understanding

Currently there are two office buildings on the site consisting of 100,000 square feet and 161,000 square feet. The Applicant is proposing to maintain the existing 100,000 square-foot office building, converting the existing 161,000 square-foot office building to a 125-room hotel, constructing a 149-unit apartment building and 22 townhouse units to be located on the west side of NYS Route 120 (King Street). Site access will be maintained via an existing full-movement access drive to NYS Route 120 (King Street), opposite American Lane for the office building, hotel and apartments, while a full-movement access drive is proposed to Cooney Hill Road for the townhouses.

If the two existing office buildings were to be occupied it would generate a total of 303, 152 and 300 vehicle trip ends during the weekday morning, weekday midday and weekday afternoon peak hours, respectively. The proposed new hotel, apartments and townhouses, with the existing office building to remain, are estimated to generate a total of 253, 137 and 285 vehicle trip ends during the weekday morning, weekday midday and weekday afternoon peak hours, respectively. The proposed development is estimated to have a net decrease in total site traffic of 50, 16 and 15 vehicle trip ends during the weekday morning, weekday midday and weekday afternoon peak hours, respectively. Below is a table summarizing the change in Development Program as provided in the Applicant's Traffic Study.

LAND USE	TRAFFIC DIRECTION	VEHICLE TRIP ENDS		
		Weekday Morning	Weekday Midday	Weekday Afternoon
1) Total Existing Office Buildings	Enter	261	76	47
	Exit	<u>42</u>	<u>76</u>	<u>253</u>
	Total	303	152	300
2) Total Proposed Multi-Use Development	Enter	153	68	117
	Exit	<u>100</u>	<u>68</u>	<u>168</u>
	Total	253	136	285
Net Change (2-1)	Enter	-108	-8	70
	Exit	<u>58</u>	<u>-8</u>	<u>-85</u>
	Total	-50	-16	-15

TRAFFIC AND TRANSPORTATION [Chapter 10 and Appendix G]

Based on this review the following Substantive comments are provided:

1. Pages 10-3 and 10-4 – Chapter 10.B.4, Appendix G-1 – Section E and Figures 2 through 4-A (Existing Traffic Volumes): Existing traffic volumes are reasonable acceptable and are prior to COVID-19 Pandemic conditions.

2. Pages 10-4 and 10-5 – Chapter 10.C. Appendix G-1 – Section F and Figures 5 through 23-A (No-Build Traffic Volumes): The future 2024 no-build traffic volumes included an annual growth rate of one percent, included seven other developments, and reoccupancy of 50% of Swiss Re and of the two site office buildings and is reasonably acceptable.

3. Page 10-6 – Chapter 10.D.1.a., Appendix G-1, Section H and Figures 24 through 31-A (Site Traffic Distribution): The site traffic distribution used in Figure 24 for the Hotel and Apartments arrivals is incorrect, as it has all volumes using the Cooney Hill Road access drive and the directional distribution is incorrect when compared to the departure distribution. Figure 24-A is correct.

Comment 10-2

The site traffic distribution used in Figure 30 for the Townhouses arrivals is incorrect, as it has all volumes using the NYS Route 120 access drive and the directional distribution is incorrect when compared to the departure distribution. Figure 30-A is correct.

Comment 10-3

4. Pages 10-5 through 10-7 – Chapter 10.D.1.a., Appendix G-1, Section G and Figures 32 through 40-A (Site Traffic Generation): The errors found in the distribution figures were not carried over into the site traffic generation figures. The site traffic generation and assignment figures are appropriate. On Page 10-6, paragraph below Table 10-1, during the weekday morning peak hour there are 108 few trips entering, not 103 trips.

Comment 10-4

5. Page 10-7 – Chapter 10.D.1.a., Appendix G-1, Section I and Figures 41 through 43-A (Build Traffic Volumes): Build traffic volumes are reasonably acceptable.

6. Pages 10-7 through 10-17 – Chapter 10.D.2., Appendix G-1, Section K and Tables 3 and 4 (Capacity Analysis): Based on a review of the Synchro Files below are the following technical comments:

Comment 10-5 a) NYS Route 120 at Swiss Re/IBM Access Drives – The southbound right turn channelized lane should have been set to free not permitted in the timing settings; however, this improves the operations for the southbound right turn lane, southbound approach and intersection overall Levels of Service. The phasing does not match the timing plan; however, this was done to provide the HCM 6th Edition results required by NYSDOT and is acceptable.

Comment 10-6 b) NYS Route 120 at American Lane South/113 King Street Driveway – The phasing does not match the timing plan; however, this was completed to provide the HCM 6th Edition results required by NYSDOT and is acceptable. Based on our field visit, the northbound left turn protected arrow into the site was never activated and possibly the detection is not working.

Comment 10-7 c) NYS Route 120 at Gateway Lane – The phasing does not match the timing plan; however, this was completed to provide the HCM 6th Edition results required by NYSDOT and is acceptable. The Phase 5 split should have been 45 seconds during the weekday morning peak hour; however, this does not change the results of the analysis.

Comment 10-8 d) NYS Route 22 at Broadway/Sir John's Plaza – The phasing does not match the timing plan; however, this will not change the results of the analysis.

Comment 10-9 e) NYS Route 22 at Central Westchester Expressway/Reservoir Road/Church Street – Based on a field visit, the eastbound approach should be a left turn only and shared left/through/right lane.

Comment 10-10 Based on our review of the capacity tables, there are a few minor needed corrections. At the intersection of NYS Route 22 and North Broadway/Sir John's Plaza, the intersection overall Level of Service during weekday morning peak hour for the build conditions with DEP Improvements should have been "B" not "C." At the intersection of NYS Route 22 and Central Westchester Expressway & Reservoir Road/Church Street, the intersection overall Level of Service during weekday afternoon peak hour for the existing conditions should have been "E" not "D."

Comment 10-11 7. Page 10-18 – Chapter 10.D.7 and Figure 10-2 and Appendix G-1, Section L (Stopping Sight Distance (SSD) Analysis): The requirements for SSD should be adjusted for approach grades, as Cooney Hill Road has a downhill grade from east to west. Also, the profiles should have an object height of 2.0 feet at the site driveway, not 3.5 feet as shown. Also, based on a field visit, there is a concern with limited sight distance exiting Cooney Hill Road onto NYS Route 120 (King Street) in both directions. The Applicant should provide an ISD analysis for this intersection and offer any mitigation to improve ISD based on required standards.

Comment 10-12 8. Page 10-19 – Chapter 10.E (Mitigation): Based on a review, the Applicant provided possible timing changes to the intersection of NYS Route 120 at Gateway Lane during the weekday afternoon peak hour. Based on the results of the analysis, there is a significant impact to the southbound lane group

September 27, 2021

Comment 10-12
(cont'd)

and approach of 103.4 seconds and the intersection overall of 34.8 seconds during the weekday afternoon peak hour. The Applicant should provide improvements to this intersection for the proposed project. Also, any improvements to this intersection's signal timings will need to include intersection of NYS Route 120 at New King Street, as these two intersections are coordinated. It is recommended that the Applicant explore as part of the improvements to the NYS Route 120 at Gateway Lane intersection a southbound left turn advanced left turn arrow, as well as the feasibility of a southbound left turn lane. With the timing changes provided, the northbound and southbound lane groups will continue to operate over capacity at a volume to capacity ratio of 1.09 and 1.00 and delays just below an "F" at 79.1 seconds on the southbound approach.

As noted in Comment 6b, based on a field visit, the northbound left turn protected arrow into the site was never activated and possibly the detection is not working. The Applicant should consider upgrading the detection for the northbound left turn, as well as the American Lane South and 113 King Street Driveway approaches and revising the timing plan to have no recall on the American Lane South and 113 King Street Driveway approaches, as well as the northbound left turn.

The results of the analysis indicate that the I-684 southbound off-ramp to Airport Road will continue to operate at a Level of Service "F" (long traffic delays) during the weekday morning peak hour, with a significant increase in vehicle delay of 93.1 seconds and the volume to capacity ratio which will change from 2.269 to 2.472 and the 95th percentile queue increasing from 1,328 feet to 1,400 feet. The Applicant should discuss if there are any mitigation options possible to address these impacts. This represents significant traffic delays, which require mitigation, where feasible. Below is a copy of Table 3 from the Traffic Study with the significant impacts highlighted in yellow:

	LOCATION	YEAR 2024 NO-BUILD									YEAR 2024 BUILD

Each of these comments will need to be addressed in the Final Environmental Impact Statement (FEIS). Significant traffic impacts and existing traffic delays should be addressed through mitigation, where feasible. All mitigation recommendations will require a review and approval by the New York State Department of Transportation (NYSDOT).

Respectfully submitted,

Michael A. Galante
Director of Traffic

Subject: **Airport Campus – Substantive Review of Draft Environmental Impact Statement (DEIS) [#18-019]**

As requested, we have completed our substantive review of the Draft Environmental Impact Statement (DEIS) for the above-captioned project, which was accepted by the Town Board on June 23, 2021. Based upon our review of this document and associated plans, we offer the following comments for your consideration:

Comment 3-2

1. **Residential Density.** The Applicant is proposing significant changes to the DOB-20A Zoning District to permit hotel, single family homes, two-family homes, senior citizen housing and assisted living facilities in an existing office district. Specifically, the draft local law grants a 1:1 office space conversion to hotel uses and a 1:1.25 office space conversion to residential uses. In addition, the draft zoning law would provide a 25% and 50% density bonus to assisted living uses. While the 2018 Comprehensive Plan recommends changes of use in this district to permit hotel and residential uses, the plan also notes that residential uses should be at an appropriate scale. The proposed zoning changes would permit approximately 500 new residential units at the Airport Campus site and 250 units at the SwissRe site. The Town Board will need to determine whether the proposed amount of new residential development would be appropriate in the DOB-20A Zoning District. The Applicant should provide the rationale for requesting the proposed residential density on the property. In addition, the Applicant should provide the rationale for the proposed residential and assisted living bonus densities.

Comment 3-2

2. **Density.** The maximum permitted FAR in the DOB-20A Zoning District is 0.15. It is recommended that the maximum resulting density after the DOB-20A zoning revisions not exceed that amount. The Applicant should describe the maximum potential FAR in the DOB-20A after the zoning changes. If in excess of 0.15, the Lead Agency will need to determine whether the proposed local law would should be revised.

3. Zoning Text Complexity. The proposed zoning amendments are overly complex, will be difficult to administer and difficult for the Lead Agency to fully evaluate as presented. It is strongly recommended that the text be revised with an aim to simplify the DOB-20A regulations. Particular attention should be given to eliminating density bonus provisions, setbacks based upon use and height maximums based upon use, where possible.

Comment 3-2

4. Permitted Uses. The Applicant is proposing significant changes to the DOB-20A Zoning District to permit hotel, single family homes, two-family homes, senior citizen housing and assisted living facilities in an existing office district. In addition to permitting the conversion of existing and fully approved office space to residential uses, the draft local law also permits the construction of the following new permitted principal uses:

Comment 3-2

- Medical offices
- Hotels
- Multifamily, townhouse, single-family , and two-family dwellings
- Senior citizen housing
- Assisted living facilities

In an effort to spur occupancy of existing vacant office space, there is a clear rationale to permit other compatible uses including residential. However, the rationale for also permitting new multifamily, townhouse, single-family, two-family dwellings and senior citizen housing as new permitted principal uses is less clear. The Applicant should provide such rationale to the Lead Agency.

It seems that the permitted uses for hotel, multifamily, townhouse, single-family, and two-family & senior citizen housing should note that these uses are permitted only under the office conversion provisions of Section 355-40(X)(2)&(3) of the Town Code. Specifically, the Lead Agency should give consideration to permitting a wide array of uses that would permit the conversion of existing vacant office space, but prohibit the transfer of existing unbuilt office to new residential multifamily. Unbuilt portions of the property could be rezoned back to single family residential as that was the zoning in place prior to the current DOB-20A zoning.

5. Zoning & Height. The proposed modifications to the DOB-20A district's dimensional regulations would increase the maximum allowable building height from 3 stories and 45 feet, to 85 feet for multifamily buildings. This increase in height would permit the construction of a multifamily building that could be as much as 40 feet taller than currently permitted office buildings. This increase in height will be discernable from locations where the building can be observed, such as from NYS Route 120. The Applicant should provide the rationale for permitting the proposed additional height on the property. The Town Board may wish to limit the maximum permitted height of buildings in the DOB-20A Zoning District to minimize these impacts.

Comment 3-2

6. Visual Impacts. Generally, the NYS Route 120 corridor is defined by heavily wooded frontages and rising topography. The Lead Agency will need to determine whether the visual impacts of the proposed action are acceptable. If not, the Applicant may wish to provide additional mitigation measures including the relocation of the multifamily building, providing larger setbacks, reducing building height, or providing additional screening.

Comment 11-2

7. Setbacks. The existing DOB-20A zoning setbacks are the same as the OB and OB-H Zoning District and are the largest of any zoning district in the Town. The proposed action would reduce the front yard setback from 150' to 65' for multifamily buildings and 200' for townhouses (57% reduction in setback & 33% increase in setback), the side yard setback from 300' to 60' (80% reduction in setback) and the rear yard setback from 300' to 80' for multifamily buildings (73% reduction in setback). The proposed reductions in setbacks may create significant visual impacts from NYS Route 120 and surrounding properties. The Applicant should provide the rationale for permitting the proposed reductions in setback.

Comment 3-2

8. Building Coverage. The existing DOB-20A zoning building coverage regulations are the same as the OB and OB-H Zoning District. The proposed action would increase the maximum permitted amount of building coverage from 10% to 15% (50% increase in building coverage). The proposed increase in building coverage would permit additional density on the site, as well as create additional impervious surfaces within the DOB-20A Zoning District. The Applicant should provide the rationale for permitting the proposed increase in maximum permitted building coverage.

Comment 3-2

9. Cumulative Impacts. This project, along with other proposed projects near the Armonk Hamlet, may create unacceptable traffic, parking and congestion impacts within the hamlet area. The Town has recently completed the Armonk Parking Study. Part of the report notes that “a 20% increase in downtown activity, for example, generated by the new near downtown households and hotel rooms, would result in peak-hour occupancy measures closer to the low-end of the model projections – 577 parked cars, compared to the model projection of 574 parked cars. Such a dramatically positive response to these new developments, in terms of increased downtown shopping, dining, and other activity, would utilize about 86% of the existing supply.

Comment 10-14

In a well-managed system, this is an optimal balance of demand/supply efficiency. This suggests that there is significant capacity to accommodate increased downtown activity, particularly with the implementation of parking management strategies outlined in this report.

As more downtown and near downtown development continues, however, the Town may want to plan for supply expansions to accommodate peak parking demand of closer to high-end of the model projections -- 663 parked vehicles – which would suggest an optimal, well-managed supply of 730-765 spaces.”

Given the recommendations of the report, the Lead Agency will begin planning for expanded parking in the Armonk hamlet. The Applicant should indicate whether consideration would be given to contributing toward this goal as part of a Community Benefits Agreement.

10. Parking. It is noted that each parking space is required to be accessible. It is not clear whether the proposed 4 off-street parking spaces for each residential Townhome will be accessible. If the garage spaces are inaccessible when cars are parked in the driveway spaces, only two spaces could be counted in that scenario. In addition, the Applicant is proposing to share required parking between the office and hotel. Since hotel parking would be required during typical office occupancy, the Applicant should further explain the rationale for the proposed shared parking arrangement.

Comment 10-17

Comment 10-14

- Comment 10-16** 11. Bus Stop. The Applicant should depict on the plans and describe a bus stop along NYS Route 120 or Cooney Hill Road. The proposed bus stop should be located in a convenient, and safe, location for students and families. It should be noted, that it is the Lead Agency's understanding that the Byram Hills Central School District will only make bus stops on public roads.
- Comment 12-3** 12. Fire Protection. The Fire Department has raised serious concerns regarding the project. Specifically, the Department noted that a ladder truck would be necessary to provide adequate fire protection. Additionally, the Department noted that the project will add additional call volume without providing an adequate number of new volunteers to staff the Department. The Applicant should further describe how the Fire Department's concerns will be addressed.
- Comment 20-1** 13. Climate Change. The FEIS should include a discussion of measures to avoid or reduce both an action's impacts on climate change and associated impacts due to the effects of climate change such as sea level rise and flooding pursuant to Section 617.9(b)(5)(iii) of SEQRA.
- Comment 14-1** 14. Archeology. It is recommended that the Applicant complete Phase 1B archeological field testing so that results can be incorporated into the Environmental Findings to be prepared by the Lead Agency.
- Comment 16-1** 15. Noise. While the proposed new residential development would not be located inside of the 65 DNL threshold for significant aircraft noise exposure, the development is within the 60 DNL contour. The Applicant has stated that standard construction methods would provide at least 20 dBA of sound attenuation. The Applicant should evaluate whether enhanced construction could further reduce noise impacts. Given the proposed residential location near the County Airport, maximum practical reduction of noise impacts would appear to be warranted.

16. Wildlife. The Northeast Bald Eagle Project Screening Form link referenced in the DEIS is not correct. The correct link should be provided in the FEIS. The form appears to be located here:

Comment 6-7

https://www.fws.gov/northeast/pafo/pdf/NE_Bald-Eagle_Project-Screening-Form_rev20200416.pdf

The Applicant should complete the form and submit the form to the Lead Agency as part of the FEIS.

* * * * *

Once all of the written comments have been submitted, responses to all substantive comments will need to be included in a Final Environmental Impact Statement (FEIS). This document is typically prepared by the Applicant and then submitted to the Town Board, as the Lead Agency, for its review. Once accepted as complete, the Town Board will need to prepare a Notice of Completion, which will be filed and published together with the FEIS. After the FEIS is filed, public comments may be submitted to the Town Board for consideration. Finally, the Town Board will need to prepare a Findings Statement with respect to the proposed project, potential environmental impacts and proposed mitigation measures. This step must precede the Town Board's determination on the zoning changes as well as any actions to be taken by the Planning Board on the environmental permits site plan applications.

Re: Airport Campus - Comments on DEIS

The Open Space Committee appreciates this opportunity to comment on the DEIS for Airport Campus. The Committee stands in full agreement and support of the Conservation Board's submission dated September 30, 2021. As the Conservation Board's analysis of the DEIS / GEIS is so comprehensive, this memo highlights just a few items.

I. Expert Guidance Should Be Followed

The Town has received guidance and comments from experts in their respective fields on this project beginning in 2018. Because we do not want the voices of these experts to be lost in the deluge of papers submitted by the Applicant, we highlight the advice and opinions of these experts below and urge the Town Board to follow their advice.

A. September 28, 2021 Letter from Westchester County Planning Board Commissioner

- *Recommendation for disapproval of residential development* for the following reasons:
 - Proximity to Westchester County Airport: the County Planning Board is “opposed to the construction of any full-time residential uses this close to the Airport, especially at this scale.”
 - High-density residential uses in remote areas: “runs contrary to the County Planning Board’s long-range planning policies set forth in *Westchester 2025*.”
Note: The County Planning Board also stated this in its letter to the Town dated 10/2/18.
 - Traffic and parking impacts: “The County Planning Board and County Department of Public Works and Transportation have consistently advised the Town against the overdevelopment of new impervious surfaces near” the confluence of the

Wampus River and Byram River “which are prone to downstream flooding.” The County Planning Board is “opposed to the concept of building more parking lots within this sensitive area to accommodate the parking demands created by irresponsible residential development.”

- Kensico Reservoir Protection
 - “The site is adjacent to the Kensico Reservoir...erosions and sediment control and stormwater runoff water quality protection - both during and after construction - are of critical importance.”

B. September 29, 2021 Letter from NYS Watershed Inspector General

- This letter thoroughly details the errors and omissions in the Applicant’s DEIS Preliminary Stormwater Pollution Prevention Plan and concludes that “A significant amount of additional work must be provided before the PSWPPP would be considered complete.”

C. October 4, 2018 Letter from NYS Watershed Inspector General

- The Applicant should employ more recent and accurate climate data.
- “At its closest, the Kensico Reservoir is approximately 500 feet away” from the Project site. “This reservoir typically supplies drinking water to 8 million people each day.”
- “Ensuring water quality in the Kensico Reservoir is of the utmost concern because it is a terminal reservoir -- the last stop before the water is distributed to consumers.”
- “Development in close proximity to the Kensico Reservoir is expected to increase discharges of polluted stormwater.”
- “One very important method for protecting the watershed of an unfiltered water supply system is...preservation of land in its natural undeveloped state.”

D. September 26, 2018 Letter from NYS Office of Historic Preservation

- “This project is in an archaeologically sensitive area. Therefore, OPRHP recommends that a Phase I archaeological survey is warranted for all portions of the project that will involve ground disturbance...”
 - DEIS 14.B.2. “While a Phase I Archaeological Survey typically includes a combination of documentary research (i.e. ‘Phase 1A’) and field testing (i.e. ‘Phase 1B’), this report summarizes the results of” a Phase 1A Study only.
 - DEIS 14.B.2.a.”As documented in the Phase 1A Study, multiple Native American sites used for short- and long-term occupation were previously reported in the vicinity of Rye Pond, which was historically located a short distance to the south of the Project. It is therefore highly likely that some Native American activity occurred on the more level portions of the Project Site.”

- DEIS 14.C.2. “It was recommended that the Phase 1B testing be implemented in the northern portion of the Project Site once the Applicant is prepared to seek site plan approval from the Town...”

E. August 28, 2019 Letter from NYS Office of Historic Preservation

- “We recommend Phase 1B testing of the northern portion of the project property.”
 - Town Director of Planning Adam Kaufman (9/13/21 Memo) recommends Applicant complete Phase 1B testing.

II. Proposed Zoning Change Runs Counter to Town and County Planning

Comment 3-2 The Open Space Committee supports the introduction of other uses on the DOB-20A parcels but does not support the Applicant’s current zoning proposal as the resulting density and scale is contrary to Town and County planning. We recommend that the Applicant propose a zoning change whose density and scale will result in buildings that embrace, not destroy, the special sense of place, that is Armonk.

A. Density

- The DEIS and GEIS demonstrate that under the Applicant’s proposed zoning change the maximum development potential for the project site is 500 residential units and 250 residential units on the nearby Swiss Re property. Such density is completely out of character in our town, and contradicts both Town and County Planning.
 - Recent letter from County Planning Commissioner notes that residential development of this density runs counter to the County’s planning policies.
 - Recent memo from Town Director of Planning Kaufman (9/13/21) states that the Town’s 2018 Comprehensive Plan “notes that residential uses should be at an appropriate scale.”
 - Adam Kaufman’s recent memo also recommends “that the maximum resulting density after the DOB-20A zoning revision” not exceed the maximum permitted FAR of 0.15 which is what is currently allowed under the town code for DOB-20A.

B. Height

- Applicant’s proposed zoning change will increase the maximum allowable building height for multifamily buildings to 85 feet.
 - The Town Director of Planning states that the proposed zoning will allow multifamily buildings that could be 40 feet taller than currently permitted office buildings and that “this increase in height will be discernible from locations where the building can be observed, such as from NYS Route 120.”

Comment 3-2 Section 4.4 of the Town Comprehensive Plan states that for the DOB-20A zone, in particular Swiss Re and former MBIA campus, the Town should explore

**Comment 3-2
(cont'd)**

allowing for an introduction of residential uses, at a scale comparable to surrounding land use patterns. The zoning change that the Applicant proposes allows for land use that is most definitely not comparable to the surrounding land use patterns and therefore contrary to the Town Comprehensive Plan.

C. Open Space

- The Town Planner's memo of 9/13/21 notes that the Applicant's proposed zoning change will increase the maximum permitted amount of building coverage from 10% to 15% resulting in a 50% increase in building coverage. "The proposed increase in building coverage will permit additional density on the site, as well as create additional impervious surfaces..."
- Additional density decreases important open space.
 - While the project site is already developed, there remains an important swath of open space that provides necessary protection to the Kensico Reservoir, provides wildlife habitat, and serves as an important wildlife corridor. A zoning change that will allow a 50% increase in building coverage will endanger all of these things and is strongly advised against.

Comment 6-1

D. Climate Change

- There can be no doubt that climate change is impacting our community. One obvious impact is the increased intensity and frequency of storms and the resulting flooding from these storms.
- The NYS Watershed Inspector General cites the importance of using recent and accurate climate data when conducting environmental impact statements and preparing stormwater management plans.
- The Westchester County Planning Commissioner urges the Town to avoid "irresponsible residential development" in sensitive areas and to avoid the "overdevelopment of new impervious surfaces" near "waterways which are prone to downstream flooding."
- The Town Board as Lead Agency has a duty to consider the impacts of climate change on our Town and an obligation to mitigate those impacts when evaluating and approving new developments, and zoning changes. The experts have clearly stated that the proposed Airport Campus project will exacerbate the impacts of climate change. Their advice must be followed.

Comment 20-1

E. Water Quality

- Both the County Planning Commissioner and NYS Watershed Inspector General have emphasized that given the proximity of the project site to the Kensico Reservoir, protection of the water quality "are of critical importance."

**Airport Campus
Town of North Castle, Westchester County, NY**

**Review of a Draft Generic Environmental Impact Statement (DGEIS) and a
Preliminary Stormwater Pollution Prevention Plan (PSWPPP)**

**Prepared by: JMC, Armonk, New York, for
Owner: Airport Campus I-V LLC, Pound Ridge, New York**

**By: Donald W. Lake, Jr. PE CPESC, CPSWQ,
on behalf of the Watershed Inspector General**

September 29 2021

The Airport Campus Project Background

The proposed Airport Campus Project (“Project”) will redevelop a 38-acre parcel, with approximately 10 acres of impervious surface, at 113 King Street in the Town of New Castle. At its closest, the Kensico Reservoir is approximately 500 feet away from the Project. In addition, there are two wetlands on site. Wastewater from the proposed project will be sent to the North Castle Wastewater Treatment Plant. The Office of the Watershed Inspector General (WIG), submitted scoping comments for the environmental impact statement for this Project on October 5, 2018.

This property was previously occupied by two office buildings and owned by MBIA. The proposed Project will include a 5-story, 151-unit, multi-family residential building (with affordable housing), 22 townhouses, an 80-room hotel and office space.

The documents reviewed here include the DGEIS, dated June 8, 2021, and 17 Preliminary SWPPP Design Engineering drawings (most are dated April 22, 2021). The extensive DGEIS contains the Preliminary Stormwater Pollution Prevention Plan (PSWPPP) beginning on page 441. The PSWPPP has an origination date of March 20, 2020, and shows revisions dated September 17, 2020, February 18, 2021, and April 22, 2021. The PSWPPP contains 1,164 pages with Appendices A through N, plus Appendix E-1.

Stormwater Management

1. Northeast Regional Climate Center (NRCC) meteorological data was paired with rainfall distribution data for Westchester County to evaluate water quantity. However, no supporting data is presented in Appendix A, Hydrology Existing Condition, to validate the assigned runoff curve numbers for the drainage areas to the design points and design lines. This information needs to be included in Appendix A.

Comment 8-4

Comment 8-5

2. The time of concentration (T_c) is defined as the time required for a drop of water to travel from the most hydrologically remote point in a sub-catchment to the outlet. An accurate T_c is necessary to assure that excessive or erosive flows do not impact downstream reaches. Beginning on page 22/195 (page 519 DGEIS), the T_c is calculated using the unpaved coefficient for shallow concentrated flow (SCF). This out-of-date calculation is a remnant from Technical Release 55 (TR55) and should not be used for developing existing condition runoff discharges. (Pond Pack also appears to have this embedded into their hydrology calculations.) Technical Release 20 (TR20), HydroCAD, or another more flexible model should be used to calculate the T_c , applying the unpaved coefficient for SCF. According to the U.S. Department of Agriculture National Resources Conservation Service's National Engineering Handbook, Section 4, Hydrology, Figure 15.2, there are coefficients for 9 different land cover surfaces for SCF or overland flow. TR55 only allows a "Paved" or "Unpaved" surface, which due to high velocity factors, shorten the T_c resulting in a prediction of higher existing condition runoff discharges rates and false peak discharges. Appropriate coefficients need to be used in all drainage area calculations. T_c concentrations need to be re-tabulated and the results need to be re-analyzed.

Comment 8-7

3. A Pollutant Load Assessment (PLA) was included in the PSWPPP. Although comprehensive, the PLA utilized data for loading rates and pollutant removal efficiencies that are over 25 years old. The 2018 "East of Hudson Watershed Corporation Stormwater Retrofit Project Design Manual Project Years 6-10" (<https://eohwc.org/wp-content/uploads/2018/02/SRP-DesignManual-Yr-6-10.pdf>), includes DEC event mean concentrations and assigned pollutant removal performance ratings for specific stormwater management practices. The PLA reviewed here needs to be updated using the East of Hudson Watershed Corporation values.

Comment 8-8

4. Page 1346/1852 of the DGEIS, Appendix F of the PSWPPP, provides a porous pavement worksheet and presents calculations for "permeable interlocking concrete pavers" (PICP). However, PICP do not act like porous pavement (PP). PICP only allows infiltration at the joints, whereas PP allows water to infiltrate across its whole surface. For this reason, PICP are generally assigned a runoff curve number based on the open area of the joint versus the entire pavement area. These pavers need to be re-evaluated to demonstrate their ability to allow water to pass through to the porous drainage layer beneath the paver blocks.

Comment 8-20

5. Recent research has shown that many stormwater treatment practices can export higher concentrations of total phosphorus (TP) than are present in their influent. Results published in the International Best Management Practices (BMP) Database: 2020 Summary Statistics, https://www.waterrf.org/system/files/resource/2020-11/DRPT-4968_0.pdf show that bioretention cells, grass strips and bioswales can export as much as 39.5% higher event mean concentrations (EMC) of TP. Grass roofs can also increase these values even higher if not properly designed. The final design

Comment 8-20 (cont'd) of the soil/media mix should ensure that no increase in TP load will result from the practice.

Comment 8-9 6. No stormwater management practice (SMP) details were presented as part of the PSWPPP submittal. These details and associated drawings must be provided to assure compliance with all criteria and permit obligations.

Erosion & Sediment Control and Design Drawings

Comment 8-10 7. No erosion and sediment control (ESC) details were presented in the PSWPPP design drawings. These details, which provide pertinent data and dimensions, must be added to the SWPPP to assure compliance with the General Permit (GP-0-20-001).

Comment 8-11 8. A note needs to be added to the PSWPPP on drawing C-401 addressing how and where waste material from clearing and grubbing operations will be disposed.

Comment 8-12 9. Two subsurface infiltration systems (SSISs) need to be added to drawings C-100 and C-101.

Comment 8-13 10. Three SSISs need to be added to drawing C-201.

Comment 8-14 11. On drawing C-202, all 3:1 constructed slopes are required to be labeled and covered with a rolled erosion control product (RECP) as part of the proposed site stabilization. These slopes should also be designated and shaded in the erosion and sediment control plan sheets C-401 and C-402.

Comment 8-15 12. Generally, a disturbance limit boundary of at least 15 feet beyond the actual grading limits is shown on site plans. This 15-foot buffer allows for several field activities, such as stripping of topsoil for slopes, equipment movement, and maintenance of required erosion and sediment control practices. For the Project, it appears the disturbed limit shown on the drawings is right at the edge of the proposed completed work and does not allow for supplemental construction activity. These boundary limits need to be expanded to accommodate and support the proposed field work.

Comment 8-16 13. On drawing C-401, the concrete truck washout station needs to be relocated from the west swale, out of the watercourse and away from the catch basin.

Comment 8-17 14. For the sediment trap and sediment basin located on drawings C-401 and C-402 respectively, the drainage area and sediment volumes must be shown on the drawings.

Comment 8-18 15. Stone check dams need to be placed on the plan view on drawing C-401, as noted in Note #9, Multifamily Phase Sequence. The numbering order for the general Notes column needs to be corrected. In addition, the Sequence Notes call for the topsoil stockpiles to be covered. The PSWPPP needs to specify the type of cover material to be used, such as seed and mulch or plastic sheeting.

Comment 8-19

16. On drawing C-402 the soil stockpile area is shown outside the disturbed area limit. This needs to be corrected.

Comment 7-1

17. No wetlands are to be disturbed at the Project site. However, according to drawing C-302, small portions of two wetland buffer areas are proposed for development. The combined sum of the disturbed wetland buffer areas at both locations is about 2,800 square feet or 0.06 acres. After examining the Grading Plans, C-201 and C-202, these wetland buffer disturbances appear to be difficult to change and seem reasonable for their water quality benefits.

Summary

A significant amount of additional work must be provided before the PSWPPP would be considered complete. The design details provided in the PSWPPP for stormwater quantity control, water quality management, runoff reduction requirements and erosion and sediment control practices must be added to the design drawings to “connect the dots” and ensure that the site will meet all the required stormwater management criteria and function as designed.

BYRAM HILLS SCHOOL DISTRICT
 10 Tripp Lane, Armonk, New York 10504
 914-273-4082, Ext. 5910 Fax: 914-273-2516

Jen Lamia, Ed.D.
 Superintendent of Schools

To: The North Castle Town Board
 Re: Airport Campus Public Comment

Date: July 23, 2021

Airport Campus I-V LLC ("Applicant") set out to assess the potential environmental impact of the redevelopment of the 113 King Street site ("Project Site"), also known as Airport Campus or the former MBIA offices. Upon receipt of the draft summary of the impact of the Project, I sent a letter from the Byram Hills School District ("District") to Peter Feroe, AICP, on June 8, 2020. The letter to Peter Feroe emphasized the District's concern that the number of public school age children may be underestimated in the draft report and that the potential fiscal impacts to the District could be substantial.

The State Environmental Quality Review / Notice of Completion of Draft Environmental Impact Statement recently received by the District and issued on June 24, 2021 continues to state the Applicant's opinion that, "the Proposed Project would not result in a significant adverse impact on the District".

The District requests that the Town Board consider District concerns that the proposed approval of a new 151 unit multi-family building and 22 townhouse unit will likely generate more than the estimated 27 school-aged children, the cost of which will not be offset by net new tax revenue identified by the Applicant as associated with the Proposed Project (\$291,870). It is the District's opinion that a burden of additional cost will be borne by existing taxpayers in the school community based upon the number of students resulting from this project and the inability of the proposed new tax revenue to meet those fiscal needs.

The Byram Hills School District requests that the Town Board consider the impact of this proposed project on the District and community taxpayers based on the data points identified below:

1. Methodologies Used by the Applicant to Estimate Number of School-Aged Students

a. Rutger's Multiplier Method

The Applicant utilized the Rutger's Multiplier Method ([2018 - https://bloustein.rutgers.edu/wp-content/uploads/2015/03/NJDM-updated-2018.pdf](https://bloustein.rutgers.edu/wp-content/uploads/2015/03/NJDM-updated-2018.pdf)) for estimating the potential school aged children, which is based on Census data from **2000** and based on housing prices from **2005**. The Rutgers Multiplier Method is often criticized for its ability to be used as a unilateral tool across different towns and states to estimate the number of school age students anywhere in the nation over any number of years.

The Rutgers Multiplier used by the Applicant to determine PSAC (Public School Age Children) for 1 bedroom units = .07; two bedroom units = .16 (for multifamily dwellings); and three bedroom units = .28

Table 12-4

Proposed Project – Estimated Public School Age Children: Rutgers Method

Type of Unit	Number of Units	Multiplier	Public School Age Children
MULTIFAMILY BUILDING			
1-BR 5+ Units – Rent*	39	0.07	2.7
2-BR 5+ Units – Rent**	110	0.16	17.6
TOTAL	149		20.3
TOWNHOMES			
3-BR Single-Family Attached***	22	0.28	6.2
TOTAL	171		26.5

Note: Bedroom (BR)
Sources:
* Rutgers University Center for Urban Policy Research; New York Table 3-1 All Public School Children: School-Age Children in Public School (PSAC); 5+ Units – Rent, 1 BR; More than \$1,000
** Rutgers University Center for Urban Policy Research; New York Table 3-1 All Public School Children: School-Age Children in Public School (PSAC); 5+ Units – Rent, 2 BR; More than \$1,100
*** Rutgers University Center for Urban Policy Research; New York Table 3-1 All Public School Children: School-Age Children in Public School (PSAC); Single-Family Attached, 3 BR; More than \$269,500

Comment 12-7

The Multiplier Method used accounted for a projected number of only 27 students from up to 151 rental units (39 one-bedroom and 110 two-bedroom units) and 22 three-bedroom single family attached townhomes. The District does not identify this multiplier as a reliable method for estimating the number of potential students from the Project. It is important to note that the same multiplier would be used in determining PSAC in areas as different as New York City, Buffalo, and Westchester.

b. Case Study Method of Estimated School Age Children

The Applicant also included a *Case Study Method of Estimated School Age Children* from Westchester to support the number of students predicted using the Rutgers Multiplier Method.

Table 12-5

Proposed Project – Estimated Public School Age Children: Case Study Method

Development	Unit Mix	School District	No. of Students Enrolled*	Total No. of Units	Ratio	Ratio Applied to Proposed Multifamily Building
125 Parkway Road (Avalon)	1-BR, 2-BR, and 3-BR units	Bronxville	31	110	0.282**	42
15 Kensington Road (Villa BVX)	1-BR, 2-BR, and 3-BR units	Bronxville	4	53	0.076	11
300 Columbus Avenue (The Avenue at Crestwood)	41 Studio, 6 1-BR units	Eastchester Union Free	2	47	0.043	6
55 First Street (Marbury Corners)	55 Condos and 6 Lofts	Pelham Union Free	4	61	0.066	10
64 Midland Place (Quarry Place)	1-BR, 2-BR, and 2-BR + Den	Tuckahoe Union Free	4	108	0.037	6
746 Mamaroneck Avenue (Avalon Willow)	1-BR, 2-BR, and 3-BR units	Mamaroneck Union Free	14	227	0.060	9
Total			59	606	0.097	14.4

Notes:

*Based on average enrollment of 2015–2016 through 2018–2019 school years, where available.

** Ratio inflated due to the number of three-bedroom rental units within the Avalon building. As supported by the Rutgers CUPR multipliers (see Table 12-4), three-bedroom units can be expected to have a greater number of school age children. The Proposed Project does not include any three-bedroom rental units.

Bedroom (BR)

Square Feet (SF)

Comment 12-7

The District is concerned about the use of the Case Study as a fair estimate for predicting numbers of public school age children in Byram Hills.

Comment 12-7
(cont'd)

- The 2015 ESI Demographic Multipliers Report of 2017 shared at the National Planning Conference on Demographic Multipliers cautions that, “SAC (School Age Children) multipliers generated by local surveys of recent developments can be misleading. These surveys reflect conditions of a very small sample of developments. Because of aging, the snapshot data becomes obsolete once the student cohorts shift upward.” (<https://econsultsolutions.com/wp-content/uploads/2018/04/NY.pdf>).
- The District wonders if the numbers in the Case Study are further misleading as the Applicant notes that the numbers of students enrolled in the Case Study Method was, “Based on average enrollment of 2015-2016 to 2018-2019 school years, **where available**,” indicating that the information presented may not be complete.
- The information from the case study is also inclusive of school years starting from 2015 to 2018, which may now be outdated data for Westchester considering that city dwellers with children have been moving to the suburbs in large numbers as a result of the pandemic.
- The case study projections show the total number of units and the total number of students enrolled as inconsistent, indicating that these numbers may not be valid for comparison. For example, Bronxville yielded 31 students to 110 units while Mamaroneck only yielded 14 students to 227 units in 1, 2, and 3 bedroom units.
- It is unclear if these units are located in similar settings, which may have affected the disparate numbers produced.
- There are many townhome and condominium units within Armonk proper that could have been studied more recently to more accurately portray the number of students living in those units and in the town where the proposed Project is located.
- The towns cited above are in southern Westchester where there is generally a large stock of multifamily housing. This proposed Project would be more unique for Armonk, which could render these comparisons less relevant and comparable.

2. Projected Enrollment

Comment 12-6

Comment 12-6 The Applicant stated that enrollment in the District was at 2,300 students in the 2018-2019 school year and expected to see a decline based on a Demographer Report from the District. The Applicant cited the Superintendent that the peak of 2,818 students in the past had our schools at capacity. Due to recent home sales, likely as a result of the pandemic, the District has already enrolled 2,316 students for 2021-2022, which is 69 students above what was predicted in the Demographer’s Report. Those numbers do not yet represent the additional dozens of students we have traditionally registered throughout the summer. Enrollment is no longer declining, and with the renewed housing market activity, it is increasing. It is important to note that the peak of 2,818 was reached with the existing footprint of housing stock within our District, and it is certainly possible that we reach that number again at some point in the future. We believe that a lack of housing turnover has depressed these numbers, and turnover has increased during the pandemic with the current trend of families moving out of more densely populated areas.

Year	Estimated Enrollment	Current Actual Enrollment
------	----------------------	---------------------------

2021-2022	2,247	2,316
-----------	-------	-------

The District has had to add two new sections of kindergarten since June 2021 due to increased enrollment and may have to add a section of grade 2 before September if there are more entrants. Kindergarten, 1st grade and 2nd grade are currently at capacity before additional teachers and aides need to be employed.

3. Projected Costs to the District

It is the District's concern that the proposed Project will have a greater impact on the resources of the District than indicated in *The State Environmental Quality Review / Notice of Completion of Draft Environmental Impact Statement* and that the projected costs to the District will not be covered by the estimated net new tax revenue identified in the report.

The Applicant indicates:

Applying the per pupil programmatic cost (net of state aid and other revenues) of \$26,282 to the new students projected by the two methods utilized (20 from the case study multiplier method and 27 from the Rutgers multiplier method) results in a potential annual additional cost to the BHCD District ranging from \$525,640 to \$709,614. It is important to note, however, that the per pupil programmatic cost to the school district is likely much higher than the actual marginal cost of adding students to the district. Specifically, the largest portions of the District's programmatic budget are salaries and employee benefits (65 percent). As described above, it is unlikely that the Proposed Project would require the District to hire more teachers or other staff. Therefore, it is likely that the actual cost to the district of an additional student would be approximately 35 percent of the total programmatic cost, or \$183,974 to \$248,365 per year. These figures can be compared to the estimated \$291,870 increase in property tax revenues that the District would receive annually from the Proposed Project as documented in Chapter 13, "Fiscal and Market Impacts," when compared to the existing tax revenue generated by the Project Site.

The Applicant assumes that additional students will not result in additional teachers and staff, which is only possible if all students are spread between all grade levels and that students do not require special education services. Even then, some sections may have to be increased (as indicated in our current K, 1, 2 enrollment numbers). New buses would also need to be purchased (at least 2), and 2 full time drivers and monitors hired with benefits as there would be a minimum of 8 school runs anticipated to or from Airport Campus daily, including late buses at the middle and high schools.

The District also asks the Town Board to consider that there are other proposed housing development projects in process in the District. The needs of the District for the Proposed Project would far exceed the estimated \$291,870 increase in property tax revenues received and identified below from the Applicant's report. The District is concerned that the current taxpayers will be impacted by an enrollment increase.

Comment 12-8

Table 13-9
Estimated Property Tax Revenue

Taxing Jurisdiction	Existing Tax Payments	Estimated Tax Payment with Proposed Project¹	Net New Tax Revenue
Town of North Castle	\$194,275	\$264,890	\$70,615
Byram Hills Central School District	\$802,991	\$1,094,861	\$291,870
Town of North Castle Special Districts	\$72,505	\$91,273	\$18,768
Westchester County	\$160,885	\$219,362	\$58,477
Total	\$1,230,656	\$1,670,386	\$439,730³

Notes:

¹ Estimated tax payments are for the purpose of environmental review and are not binding. Actual tax levy would be determined by the Town of North Castle Assessor.

² Total Special District taxes include Fire District #2, Ambulance District #2, Blind Brook Sewer District, and Sewer District #3. The increase in taxes to Sewer District #3 from the Proposed Project cannot be calculated as this payment varies by parcel. For the purposes of a conservative analysis, the estimate of Special Districts taxes for the Proposed Project assumes that the taxes paid to Sewer District #3 would be equal to the existing taxes, though it is likely that taxes would increase.

³ Total shown does not reflect hotel occupancy taxes estimated at \$158,000 annually (refer to Section 13.C.4)

Source: Westchester County Property Tax Rates

4. Impact of Zoning Changes to Neighboring Commercial Properties

There are additional commercial properties located within the BHCS D that are currently zoned for commercial use in the same area as the Project. According to the Zoning Petition of 2018 submitted by Veneziano & Associates, "The subject site was rezoned DOB-20A, **together with Swiss Re and CitiGroup**, to promote low density, environmentally sensitive development along the watershed." (file:///Users/jlamia/Desktop/airport_campus_113_king_street_zoning_petition_6-5-18_2.pdf).

Should the Project be approved for changed zoning at 113 King Street, the District wonders about the potential for the other commercial properties to make a similar request, particularly since the other properties would now be in a mixed-use zoning area.

Conclusion

In summary, the District opinion is that the Applicant is underestimating the number of students for the Project which will require additional teachers, staff, buses and drivers/monitors to account for students living at the Airport Campus location. The projected costs will not be offset by the anticipated new net tax revenue of only \$291,870. The District is also concerned that students from other projects proposed to the town and a turnover of home sales due to the pandemic may already potentially bring the District enrollment to its limit. I hope that this information is helpful to you.

Thank you,

Jen Lamia, Ed.D.

 Armonk, NY 10504

***Re: Comments on Draft Environmental Impact Statement ("DEIS")
 for the Proposed Airport Campus Redevelopment***

Dear Mr. Kaufman:

As you will recall, this firm, together with the engineering and planning firm Sam Schwartz, represents Swiss Re America Holding Corporation, and its respective affiliates (collectively, "Swiss Re") in connection with the various Airport Campus entities' proposed Zoning Code Amendments and development proposal for the Airport Campus Property. Swiss Re owns property, located at 175 King Street, adjacent to the Airport Campus Property.

Comment 9-1

While Swiss Re is generally supportive of the Airport Campus initiative, it remains concerned about the impact of the proposed rezoning on water supply and water quality. Based on analysis of water demand on the Swiss Re site completed by Swiss Re, the maximum water usage for the building and cooling tower for the existing Phase 1 Building on its property was recorded to be approximately 54,000 gallons per day ("gpd"). In addition, Swiss Re has the ability, and previously received approval for another similar building on its property, which could have equivalent demands as the Phase 1 Building. As such, the potential level of water usage on the Swiss Re property appears significantly greater than the estimated volume of 13,740 gpd that would be projected using the New York State Design Standards for Intermediate Sized Wastewater Treatment Systems, (2014), as reported in the Airport Campus DEIS.

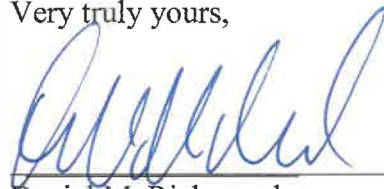

Comment 9-1

In connection with this, Swiss Re would be pleased to participate in future discussions on water demand and supply, including future discussions with the County of Westchester and the Town of North Castle on alternative measures beyond on-site well water to

Comment 9-1 meet future water demand, including extension of public water supply facilities along *King*
(cont'd) Street.

Swiss Re appreciates your Board's attention to this process, and hopes that it will take the comments herein in the constructive spirit in which they are intended. If Swiss Re can provide any additional information, or answer any questions which would assist your Board in evaluating the pending applications, please do not hesitate to contact us at any time.

Very truly yours,

Daniel M. Richmond

A P P E A R A N C E S:

COUNCILMAN	BARBARA DiGIACINTO
COUNCILMAN	JOSÉ BERRA
COUNCILMAN	SALEEM HUSSAIN
COUNCILMAN	BARRY REITER

ROLAND A. BARONI, TOWN ATTORNEY
KEVIN HAY, TOWN ADMINISTRATOR
ADAM KAUFMAN, DIRECTOR OF PLANNING
ALISON SIMON, TOWN CLERK

ALSO PRESENT:

Anthony Veneziano, Esq.
Aaron Werner, AICP, AKRF
Andrew Ostrander, AIA, Perkins & Eastman
Jane Black, Conservation Board

1 COUNCILMAN DiGIACINTO: So we have
2 public -- two public hearings concurrently,
3 because they apply to the same applicant.
4 So I'm going to read them both.

5 And then, Alison, I'll ask you for
6 any correspondence.

7 A, opportunity to provide comment on
8 the Draft Environmental Impact Statement
9 DEIS, and Draft Generic Impact Statement,
10 DGEIS, prepared in connection with the
11 proposed Airport Campus Development, 113
12 King Street, Armonk; and B, consider a local
13 law to amend the code of the Town of North
14 Castle, Chapter 355, entitled, Zoning with
15 respect to the designed office building 20A
16 DOB-20A zoning district regarding the
17 proposed Airport Campus Development at 113
18 King Street, Armonk.

19 Alison, do you have any --

20 Oh, I should first open a public
21 hearing.

22 MS. SIMON: Yes.

23 COUNCILMAN DiGIACINTO: So I need a
24 motion to open the public hearing.

25 MR. REITER: I make that motion.

1 COUNCILMAN HUSSAIN: I second.

2 COUNCILMAN DiGIACINTO: All in favor?

3 (The motion was unanimously passed.)

4 COUNCILMAN DiGIACINTO: Alison, do
5 you have any public correspondence?

6 MS. SIMON: I do. The notices of the
7 public hearing, the affidavit of posting
8 calling for the public hearing, affidavits
9 of publication from The Journal News calling
10 for the public hearing, certificates
11 denoting mailing of notices of this hearing
12 to adjacent property owners.

13 At the June 23, 2021 town board
14 meeting, the town board accepted the Draft
15 Environmental Impact Statement, DEIS, and
16 the Draft Generic Impact Environmental
17 Statement, dated June 23, 2021 as complete,
18 and established a comment period until
19 September 30, 2021.

20 The Notice of Completion of the
21 accepted DEIS and DGEIS dated June 24, 2021
22 was sent to all involved and interested
23 agencies, and we have the proposed local law
24 for consideration.

25 COUNCILMAN DiGIACINTO: Okay. Thank

1 you.

2 I'm just going to share some facts
3 about the -- both the topics of the public
4 hearing. And then, Roland, I would ask you,
5 if you don't mind, to go over the process.

6 The Airport Campus is the former MBIA
7 property. And if you were at the reservoir
8 and you turn right at the traffic light to
9 go up King Street, I would say maybe
10 approximately two miles you would find the
11 former MBIA Airport Campus on your right.
12 It's approximately 38 acres. As has been
13 mentioned, it is zoned DOB-20A, Designed
14 Office Business district, and this
15 business -- this district does not permit
16 residential, it does not permit hotel use.
17 It is a business district.

18 North Castle has three other
19 properties that are zoned DOB 20-A: Swiss
20 Re, which is 127 acres, and Citigroup, which
21 is 26 acres. So it's a very significant
22 application we have before us because it
23 does apply to a total of three parcels on
24 King Street. And I think that in terms of
25 the -- the impact we have to look at it

1 very, very carefully.

2 The Airport Campus has on site
3 presently -- and please correct me if I make
4 any errors -- two vacant three-story
5 buildings that are approximately 261,000
6 square feet, 328 parking spaces, a
7 three-story parking garage with 316 spaces,
8 and an 1820s farmhouse.

9 And I believe I asked this question
10 before. The farmhouse is not landmarked; is
11 that correct?

12 MR. VENEZIANO: No.

13 COUNCILMAN DiGIACINTO: It is not.

14 Also important to keep in mind with
15 this application that in 2003/2004 the North
16 Castle town board and the North Castle
17 planning board approved on the MBIA
18 property, which is now Airport Campus, an
19 office building that is 238,000 square feet,
20 a 20,000 square foot meeting house, and a
21 five-story parking garage with a thousand
22 parking spaces. Once again, those are
23 approved. They have not been built. But
24 it's my understanding that basically the
25 applicant could go for site plan approval;

1 is that correct?

2 MR. VENEZIANO: Yes.

3 COUNCILMAN DiGIACINTO: So that you
4 would not -- you would not have to come
5 before the town board. This is a total just
6 site plan approval.

7 So that is basically, you know, my
8 overview at this time.

9 And, Roland, if you would go over the
10 process, please.

11 MR. BARONI: Sure.

12 So tonight you're opening public
13 hearings on both the DEIS, which includes
14 the GEIS component, and the public hearing
15 on the zoning amendments. The fact that
16 you're opening the hearing on the DEIS means
17 that you've deemed it complete. The
18 applicant is studying in the DEIS
19 site-specific impacts to its property, and
20 in the generic environmental section, it's
21 giving a global view, because there's at
22 least one other property in that corridor
23 which could benefit from what you're
24 considering.

25 COUNCILMAN BERRA: Roland, when you

say "one other," didn't we just say there are two because of Citibank?

MR. BARONI: Well, in order to qualify, the way the zoning amendments are structured, you have to have office space, and they don't have office space at the Citigroup site. So it's really I think just the one other property that would currently qualify for the zoning text amendments that you're considering.

COUNCILMAN BERRA: Thank you for the clarification.

MR. BARONI: So you'll likely adjourn those public hearings tonight. And at some future date you'll reopen the public hearings. And when you feel that you've -- all the comments and questions from the public have been exhausted, you'll likely close the public hearing on the impact, the Environmental Impact Statement, and that will -- and you'll adjourn the public hearing on the zoning, and that will allow the applicant to go start preparing what's called the Final Environmental Impact Statement, which is the answers to all the

1 questions and comments which have been made
2 and asked.

3 And at some future date, you'll
4 reconvene that process once you deem the
5 FEIS complete, and then you'll reconvene the
6 zoning hearing at that point. You'll
7 consider findings, which will conclude the
8 environmental process. And then you'll be
9 free to consider the zoning amendments.

10 COUNCILMAN DiGIACINTO: Okay.
11 Roland, just in terms of -- I realize that
12 Citigroup does not have any office
13 buildings. It's more of a conference
14 center; is that correct?

15 MR. BARONI: It's a conference center
16 with accommodations.

17 COUNCILMAN DiGIACINTO: And yet it is
18 zoned the DOB-20A. So it's not
19 inconceivable that that parcel could ask to
20 be considered at a later date.

21 MR. BARONI: Right. But they would
22 have to convert what they have there to a
23 straight office use, which right now is not
24 thought to be likely.

25 COUNCILMAN DiGIACINTO: Right.

1 Exactly. All right. Thank you.

2 COUNCILMAN BERRA: And that would be
3 a two-step process: They would have to
4 convert to office and then go from there.

5 MR. BARONI: And occupy it, and then
6 it has to be vacant I think for a period of
7 two years or more.

8 COUNCILMAN DiGIACINTO: So it would
9 be a longshot.

10 COUNCILMAN BERRA: That would be an
11 expensive way to go.

12 MR. BARONI: Yeah, it's a longshot.

13 COUNCILMAN DiGIACINTO: Would you
14 like to do the presentation?

15 MR. VENEZIANO: Good evening. My
16 name's Tony Veneziano. I'm here on behalf
17 of Airport Campus 1, 2, 3, and 4.

18 Steve Weiss is a partner in the
19 project. He had an emergency with his mom,
20 so he couldn't be here. And Geoff Ringler,
21 who is the project manager, actually has the
22 virus, so he's probably watching.

23 So Barbara and Roland, most of what I
24 had here you just said. So Aaron Werner
25 from AKRF is going to present this program.

1 And let me just see. We have a stenographer
2 here, so at the end of this hearing -- it's
3 going to be adjourned. We talked about
4 adjourning it until September. And we will
5 provide responses in the FEIS to deal with
6 the questions we get tonight and at the next
7 hearing and in the record.

8 So one of the things you talked about
9 is this 500,000 square feet approved at the
10 site, roughly, the 261 and the 238, and
11 there's amenity space in the 20,000 square
12 feet. And the zoning is a conversion
13 formula, a conversion from office to hotel
14 or to multi-family, to residential.

15 The project has 100,000 square feet
16 of office space. It has a 125-room hotel.
17 The middle -- so the southern building will
18 remain an office. The middle building will
19 be converted to a hotel. Then there is --
20 let me see how many residences -- 149
21 multi-family units in five stories, I think
22 it's over two stories of parking. And then
23 there's 22 townhouses.

24 So this plan cuts across a number of
25 markets. It will receive well certain --

1 this client has the ability to develop all
2 of it, but we'll see if they bring in
3 certain other developers to do part of it.

4 I think that -- I think we should
5 have Aaron walk through the project, the
6 EIS, and then we can respond to any comments
7 if you'd like. I'm just going to -- you did
8 a very good job, Barbara, of laying out all
9 the facts. And I think we're good. If I
10 can remember anything, I'll come back up.

11 COUNCILMAN DiGIACINTO: Just for
12 clarification, the 140-unit apartment
13 building, is it actually seven stories?
14 Because the first two are parking.

15 MR. VENEZIANO: Yeah, I think so.

16 COUNCILMAN DiGIACINTO: So it's a
17 seven-story.

18 MR. VENEZIANO: One underground.

19 COUNCILMAN DiGIACINTO: One
20 underground and two above.

21 Thank you.

22 MR. WERNER: Good evening. I'm Aaron
23 Werner from AKRF. We prepared the EIS;
24 we're the primary author of it. We also
25 have a team of several consultants to help

1 the other technical aspects of it: GMC is
2 the site civil engineer who did the site
3 plans, development concept plans,
4 stormwater, all of the draining, et cetera;
5 Perkins Eastman is the architect; Provident
6 worked on the sewer analysis; Colliers is
7 the traffic; WSP is the water. And AKRF is
8 the primary author of the document.

9 Thank you for that overview because
10 you actually cut some of my slides out a
11 bit. But I will try to be brief.

12 Just to give a summary of how we got
13 here. It's been a little bit of a road.
14 September 12, 2018 is when the town board
15 declared lead agency and issued the pos dec.
16 We held scoping between that -- around
17 September 12 and October 26. The scope was
18 adopted March 13, 2019. And then we
19 submitted our first draft on March 20, 2020
20 for completeness review. That went on until
21 about recently, June 24 is when we got the
22 Notice of Completion, and we have the public
23 hearing tonight.

24 So as Roland said, next we prepare
25 the FEIS for final comments, and then

1 findings, ending the SEQRA process.

2 So here's a quick overview of the
3 site. You did a great job presenting it.
4 It's at 113 King Street. It's the former
5 MBIA site. To the west we have the
6 reservoir, which is the P watershed land.
7 We have Swiss Re to the north, Citigroup is
8 to the east, and state line with Connecticut
9 and Greenwich/American to the east as well.

10 So it's 38 acres, former MBIA campus.
11 There also was a former 17-lot subdivision
12 in the Cooney Hill area of the site, the
13 northern portion of the site. I don't think
14 that was mentioned yet.

15 So we have two vacant three-story
16 office buildings, about 261,000 square feet,
17 surface parking 328 spaces, roughly, a
18 three-story parking structure with 316
19 spaces. There's an accessory storage shed,
20 which is the farmhouse; it's not a landmark,
21 it's not a SHPO historic building. It's
22 vacant. It's been used as storage for the
23 office space when it was there. A
24 stormwater pond. And there's some remnants
25 of the outdoor amenities that were part of

1 the MBIA use.

2 As you touched on, there is currently
3 an approved expansion plan going back to
4 2003 which allows up to approximately
5 500,000 square feet and 1,000 additional
6 parking spaces within a five-story garage,
7 which is actually in a similar location, as
8 you'll see in the next slide, to our
9 proposed multi-family buildings.

10 These approvals are in effect today.
11 There actually is an approved site plan.
12 They could go for building permits. It's
13 been extended several times, but it's an
14 actively approved project.

15 So here's our proposal, which we have
16 identified as a Preliminary Development
17 Concept Plan. It's south and to the left of
18 this image. So we have reoccupancy of the
19 southern office building for office uses.
20 The northernmost office building would be
21 converted to a 125-room hotel. We have
22 additional surface parking to the south, and
23 that parking garage that's there will remain
24 as well. And we have new construction of
25 the five-story, approximately 78 feet tall

1 149-unit multi-family building, and the 22
2 townhomes to the north in Cooney Hill area.

3 So there's two layers of town
4 approval. I just wanted to point out we
5 have the town board obviously serving as
6 SEQRA lead agency to approve the zoning text
7 amendment to the DOB-20A, the Preliminary
8 Development Concept Plan, and the special
9 permit for hotel, multi-family, and
10 townhouse uses. And then after SEQRA
11 process it would be a site plan review, a
12 detailed site plan approval, subdivision
13 approval, wetland buffer and tree removal
14 plan reviewed by the planning board.

15 So just to touch on the proposed
16 zoning, it does implement certain
17 recommendations of the 2018 comprehensive
18 plan. It allows mix of uses within DOB-20A,
19 which is currently just an office district.
20 It allows residential and hotel uses by
21 special permit from the town board. And the
22 allowable density is determined by the
23 amount either of existing or approved but
24 unbuilt office space.

25 And there's also dimensional

1 requirements that are laid out in the local
2 law for those uses. And just for an
3 example, for existing office to residential,
4 it's a 1:1 conversion, and then a 1:1.25 for
5 approved but unbuilt office space to
6 residential. And also existing office can
7 be converted to hotel under the proposed
8 zoning.

9 So for the DEIS, we have -- it's a
10 two-layer environmental review: We have the
11 PDCP project, the proposed plan, which was
12 analyzed on a site-specific level for
13 environmental impacts with the proposed
14 zoning; then we have a generic look at what
15 could happen on the project site and Swiss
16 Re on a theoretical max build-out under the
17 current zoning.

18 So currently the project site is not
19 maximized with the proposed plan. So we
20 look at that plus what Swiss Re could build
21 with the applicable conversion ratios that
22 are in the proposed zoning. So each chapter
23 of the environmental review talks about the
24 project, and then at the end of each there's
25 a look at the implications of the overall

1 build-out. And, again, any future project
2 that would utilize this would have to go
3 through this process.

4 Here's a quick slide of just
5 everything the DEIS covers. A lot. This is
6 a few examples of how the project complies
7 with the comprehensive plan recommendation.
8 There's several citations specific to the
9 MBIA site. I'm not going to read each one,
10 but I have four up here with the page
11 numbers and the sections from the comp plan.
12 So we have specific references to MBIA; we
13 have references to infill residential
14 development; underutilized office campuses;
15 we have demand for hotel.

16 So I'm going to go over to a couple
17 of areas that were looked at in the EIS that
18 are important, I know, to the board and the
19 public.

20 For traffic, we did a full traffic
21 impact study in accordance with the scope.
22 We had 15 intersections. The conclusions
23 show that we would actually have fewer trips
24 than would be the case if those existing
25 office buildings on the site were occupied.

1 No significant adverse impacts. Even though
2 it wasn't a mitigation measure, there's
3 signal timing adjustments called out for
4 four study area intersections.

5 So we have some visual simulations
6 too. We have a view here from the American
7 Lane and King Street intersection; just note
8 that in all these visual sims. The
9 applicant is proposing heavy screening along
10 King Street in the form of conifer trees,
11 which will pretty much block the view. So
12 we have a leaf-on and leaf-off view, but
13 there really is no leaf-off view here with
14 the proposed grading. So as you'll see, we
15 have the leaf-off example -- it's a little
16 dry now. Do you have water? With the mask
17 on, it's really tough.

18 I'm trying to speed through this
19 because I know a lot of it was covered.

20 COUNCILMAN BERRA: Can I ask you a
21 question while you're waiting for that?

22 MR. WERNER: Sure.

23 COUNCILMAN BERRA: In terms of the
24 screening, how long would it take for that
25 to fill in? And you may not know the

1 answer.

2 MR. WERNER: Usually ten years,
3 roughly.

4 MAN IN GALLERY: They go in at 12 to
5 14 feet high and grow upwards of two feet a
6 year. So ten years would be the answer.

7 MR. WERNER: Yeah. So the leaf-off
8 image here is really just to show you what
9 is behind that buffer. You're not going to
10 be able to see the project.

11 So viewpoint 2 is about 800 feet
12 north of 1. Again, this reminder that for
13 visual impact in SEQRA, the DEC guidance
14 specifies publicly accessible vantage
15 points. In this case King Street is that
16 vantage point because there really is
17 nothing else around the site. And the
18 primary viewers of the property are going to
19 be driving 55 miles an hour on King Street.
20 So it's a very quick view, a very limited
21 view.

22 Okay. So we have several
23 alternatives. I'm going to run through them
24 real quick.

25 The currently approved office plan is

1 the no action we have identified as one
2 alternative. It's not responsive to market
3 conditions. It's not consistent with the
4 comp plan. It's been vacant for a long time
5 and the applicant has had a hard time
6 leasing it out. The visual character would
7 be similar to the proposed project, and it
8 would have more trips for traffic than the
9 office uses.

10 Then we have the existing site
11 conditions. Again not responsive to the
12 comp plan and more traffic trips.

13 We have two reduced height options, a
14 45-foot tall building for multi-family and a
15 67-feet, approximately, four-story option.
16 Same mix of uses as the project: Motel,
17 multi-family, townhomes. Slightly less
18 visibility from King Street with a little
19 bit shorter buildings.

20 COUNCILMAN BERRA: Would that
21 four-story also have two stories of parking
22 underneath it that would add and make it a
23 six-story, do you know?

24 MR. WERNER: I believe so.

25 COUNCILMAN BERRA: Because with the

heights you're saying, 67 on the four-story,
the five-story is 78.

MR. WERNER: Partially underground
parking.

COUNCILMAN BERRA: Right. One ground
parking -- underground parking, two stories
aboveground, and presumably four stories
built on top of that.

MR. OSTRANDER: Aaron, it would be
four stories of residential over two parking
with one --

COUNCILMAN DiGIACINTO: Excuse me.
We need you to come up to the microphone.
We get complaints when people speak from the
audience.

MR. WERNER: Andrew's the architect.

MR. OSTRANDER: I apologize.

COUNCILMAN DiGIACINTO: Thank you.

MR. OSTRANDER: The 967-foot height
is reflective of four stories of residential
over two parking levels and one underground.

COUNCILMAN BERRA: Thank you.

MR. WERNER: Okay. We have a static
density alternative. This is just a simple
1:1 conversion rather than the 1 to the 1.25

1 that we have in the proposed zoning. It
2 would be a less dense project, it would have
3 fewer public schoolchildren, there would be
4 less units, and it would also have a slight
5 decrease in impervious services when
6 compared to the project.

7 We have multi-family in Cooney Hill
8 alternative, which basically switches the
9 locations of the multi-family building and
10 townhomes. You would partially be able to
11 see the multi-family building we've
12 determined, very minimal view of the
13 roofline, from the King Street/American Lane
14 intersection, viewpoint 1, and a very
15 limited view of the townhomes along King
16 Street.

17 Again, this is just a quick summary
18 of these. There's a lot more text in the
19 EIS summary.

20 We have a senior living alternative,
21 we have less potential for schoolkids,
22 obviously, with senior housing, an increased
23 demand for EMS services and water and sewer,
24 but comparable traffic trips.

25 An increased townhouse density

1 alternative which would have no multi-family
2 building but 78 townhomes across the site,
3 which would result in more disturbance, more
4 need for access roads and stormwater needs,
5 but there would be slightly less public
6 schoolchildren.

7 And lastly, we did a combined
8 alternative, which combines the 45-foot
9 alternative and the static density, so you
10 have a shorter and less dense alternative,
11 similar -- again, similar to the mixed use
12 project, and it would result in more
13 impervious and more disturbance because
14 you're going shorter.

15 The last slide is just a quick view
16 of the DOB-20A existing parcels. As we've
17 discussed already, the Swiss Re parcel and
18 our site were the subject of the generic
19 Environmental Impact Statement component.
20 So overall, the EIS looks at a theoretical
21 build-out of about 750 units and an 80-room
22 hotel between the two sites.

23 For our next steps, we'll obviously
24 be looking to the public hearing and the
25 comments. We'll respond to those comments

1 at the next hearing. We understand that
2 period ends on September 30.

3 That's all I have.

4 COUNCILMAN BERRA: Barry, do you need
5 a glass of water?

6 COUNCILMAN REITER: I have it.
7 Thanks.

8 COUNCILMAN DiGIACINTO: Thank you
9 very much.

10 Board, would you like to comment?
11 Would you like to see if anyone in the
12 audience has comments? How would you like
13 to proceed?

14 COUNCILMAN REITER: Ask the audience.

15 COUNCILMAN DiGIACINTO: José?

16 COUNCILMAN BERRA: Whatever everybody
17 else wants.

18 COUNCILMAN DiGIACINTO: Is there
19 anyone in the audience that would like to
20 make a comment?

21 MS. SIMON: We have Jane Black on the
22 list.

23 COUNCILMAN DiGIACINTO: Okay. Jane?

24 MS. BLACK: Jane Black from the
25 Conservation Board. And I just have a

1 simple request. The Conservation Board
2 would -- is interested in requesting a
3 referral on this project so that we might
4 give our input. Mr. Jango (ph) pointed out,
5 it is in a critical environmental area, and
6 it is a site that is located on the Open
7 Space Index.

8 MR. KAUFMAN: They were sent the
9 Notice of Completion.

10 So you have it. You were sent a
11 Notice of Completion.

12 MS. BLACK: Well, we got a letter
13 originally --

14 COUNCILMAN DiGIACINTO: Excuse me.

15 Adam, would you mind coming to the
16 microphone? And then, Jane, if you need to
17 respond. Once again, we get complaints
18 where people cannot hear from the audience.

19 COUNCILMAN BERRA: Extremely valid
20 point.

21 MR. KAUFMAN: I was just telling Jane
22 that the Conservation Board was sent the
23 Notice of Completion and it noted the
24 comment period. So they have that referral
25 already.

1 MS. BLACK: Right. I think the
2 Conservation Board did get that. They were
3 just looking to give more formal input to
4 the town board.

5 COUNCILMAN BERRA: So you're
6 requesting a formal referral?

7 MS. BLACK: What's that?

8 COUNCILMAN BERRA: You're requesting
9 a formal referral as was done with Eagle
10 Ridge from the town board?

11 MS. BLACK: Well, we -- my cochair
12 told me he sent an email request. I can't
13 verify that. But we would just like to make
14 this as a request for a referral, as we did
15 with Eagle Ridge. I think basically the
16 same parameters apply to this project, being
17 on the Open Space Index.

18 COUNCILMAN DiGIACINTO: Roland, can
19 you just comment. I mean, is there a need
20 for a formal referral?

21 MR. BARONI: You know, it's harmless.
22 It doesn't do any -- it's very easy to do.
23 Just make the referral, and that allows the
24 Conservation Board to feel that they are
25 included in the process. I think that's

1 what they are asking for.

2 MS. BLACK: Yes.

3 COUNCILMAN DiGIACINTO: Is that
4 something that tonight we can ask?

5 MR. BARONI: Yes.

6 COUNCILMAN DiGIACINTO: Anyone else
7 in the audience?

8 All right. Board?

9 I'll start with Barry as a senior
10 member here.

11 MR. REITER: I have no comments
12 tonight. I'd like to reserve my time. I
13 know Mike's not here tonight, and he's an
14 integral part of this. So I'm going to
15 wait. I have reviewed the binder, pretty
16 comprehensively. I do have a lot of
17 questions and things to go over. But I'd
18 like to reserve that.

19 COUNCILMAN DiGIACINTO: Okay.

20 José?

21 COUNCILMAN BERRA: I agree with that
22 sentiment, basically, but I do want to ask
23 some bigger picture questions, if that's all
24 right.

25 COUNCILMAN DiGIACINTO: Of course.

1 COUNCILMAN BERRA: This won't take
2 too much time.

3 Yes. First, going over the
4 presentation, on slide 3, could you show me
5 where the bridge is? One thing I'm
6 concerned about is we were all looking at
7 visual impacts. And, Tony, when I walked
8 the property with you, what, a couple years
9 or so ago, and you were explaining to me.

10 I'm basically in support of this. I
11 think it's a good location, but, of course,
12 we've got to see density and how it's going
13 to be used. And people are very concerned
14 about visuals and environmental concerns.

15 So one of the concerns I have is how visible
16 **Comment 11-2** those buildings are and the site is from the
17 bridge as you're driving up from -- going
18 north on Route 22.

19 MR. WERNER: It wasn't one of the
20 locations that the scope identified, so we
21 didn't look at it.

22 COUNCILMAN BERRA: Right. I'm just
23 wondering where it is there.

24 MR. VENEZIANO: Which bridge? The
25 684 bridge?

1 COUNCILMAN BERRA: No. The Route 22
2 bridge.

3 MR. KAUFMAN: It's on the other side
4 of the reservoir, José.

5 COUNCILMAN BERRA: That's what I'm
6 asking. So you can't see it?

7 MR. VENEZIANO: Route 22 is down here
8 (indicating), right, it's on the other end
9 of Swiss Re.

10 COUNCILMAN BERRA: Well, the other
11 part of 22 going down to White Plains.

12 MR. VENEZIANO: Yeah. But you can't
13 get here. You go 60 feet and then down --
14 you go up the hill and then down to come to
15 the site.

16 COUNCILMAN BERRA: Again, I'm talking
17 on this side. This is the south right here
18 (indicating).

19 MR. VENEZIANO: Here's 684.

20 COUNCILMAN BERRA: Right. And 22,
21 going from North White Plains.

22 MR. VENEZIANO: This is 120. Where's
23 22?

24 MS. SIMON: Over here (indicating).

25 MR. VENEZIANO: Right.

1 So you're confusing me. 22's up
2 there.

3 COUNCILMAN BERRA: No. 22 curves
4 around when you get to 120. As you're going
5 south, you make a left, then you take 22
6 south towards North White Plains and you go
7 over a bridge.

8 COUNCILMAN HUSSAIN: So if you look
9 at that Swiss Re -- where Swiss Re is
10 labeled, if you move your finger to the
11 left. Yeah, right. And if you continue off
12 the block.

13 MR. VENEZIANO: Up here?

14 COUNCILMAN HUSSAIN: No. That way.
15 To the left. And you go like maybe four
16 more inches on the scale, you actually hit
17 22, because it curves around.

18 MR. VENEZIANO: The bridge that goes
19 over the reservoir on 22?

20 COUNCILMAN DiGIACINTO: The rock hut,
21 you're talking about.

22 COUNCILMAN HUSSAIN: The bridge is
23 actually further down.

24 MR. VENEZIANO: It's far away. So I
25 would just say you can't see it. But we can

look at that. Is it the visual impact issue?

COUNCILMAN BERRA: Yeah.

MR. VENEZIANO: I don't think you come close to seeing this site. I know exactly where you are. I used to fish -- I mean, I know exactly where you are. I don't think there's an impact there. It's a long away way. And we're not this high up.

MR. WERNER: There's a grade change too. The Swiss Re, the western end pretty well slopes down. It's very unlikely.

MR. VENEZIANO: That's a good observation.

MR. BARONI: I mean, you certainly can study it as part of the FEIS, respond to it.

MR. VENEZIANO: Sure.

COUNCILMAN BERRA: Another question in terms of the presentation, on the generic EIS, what's the maximum number of units in one way or the other that could be built on the Swiss Re? I think you said before, at least implied, that it would allow more than what was currently being proposed.

Comment 2-7

1 MR. WERNER: Last slide kind of
2 summarizes it. The last one.

3 COUNCILMAN BERRA: Slide 9. Not 19.
4 9.

5 When you were discussing the slide,
6 it was in connection with your discussion of
7 that slide. I think you were basically
8 saying, explicitly or implicitly, that there
9 could be greater density on the MBIA parcel.

10 MR. WERNER: There could be, yes.

11 COUNCILMAN BERRA: What's the maximum
12 that could be under that?

13 MR. WERNER: 500 units. So basically
14 it's -- the project site has 261,000 square
15 feet of existing office, 238,000 square feet
16 of approved and unbuilt office. So for the
17 existing 261, it's a 1:1 ratio. When you
18 add that to the 1:1.25 you get from the 238
19 improvement on build, it comes out to about
20 558,500 which we converted to about 500
21 units.

22 COUNCILMAN BERRA: Okay.

23 MR. WERNER: That's the maximum that
24 could happen on the project site under these
25 parameters.

1 COUNCILMAN DiGIACINTO: Excuse me.

2 **Comment 2-7**

And that would be then -- the project, then,
would be all residential?

4 MR. WERNER: Yes. And on the Swiss
5 Re site, there would be -- since it's
6 360,000 square feet of existing office, the
7 1:1 conversion of existing office, the
8 hotel/residential, comes out to an 80-room
9 hotel of about 110,000 square feet and
10 250,000 square feet of residential, so 250
11 units.

12 So in total -- and that's what the
13 last amount shows. 750. 500 units on our
14 site, 250 on Swiss Re, and an 80-room hotel
15 on Swiss Re.

16 MR. VENEZIANO: I was going to
17 mention this in my opening. So we're in
18 contact with Swiss Re. The partners speak.
19 We've met with them before, most recently
20 about the public order issue. And I'm in
21 touch with their attorney, who I spoke with
22 today, and I sent him a copy of the EIS too.

23 So their position is they just want
24 to even the playing field and sort of get
25 the ratio we have. And we have DEP's

1 approval along with our site plan for the
2 second -- that phase that's 238,000 square
3 feet, and they don't. And I did Swiss Re.
4 They are trying to use that second building
5 as if they have it approved, and that has a
6 preliminary site plan approval but no site
7 plan. So there's a real figure as to the
8 two or three years of pain that MBIA went
9 through, and probably a million, million and
10 a half dollars, to go through the planning
11 board and DEP to get those approvals. So
12 that's really where I think they sit.

13 COUNCILMAN BERRA: Right. One would
14 think that Swiss Re, though, would have the
15 financial wherewithal to pursue that without
16 blinking if they were interested.

17 MR. VENEZIANO: Yeah. No, I never
18 understood -- Sara Fox got the pilot
19 agreement from the state and I never heard a
20 word about Phase 2. I never heard one word
21 about the second building, the second
22 building there, the other 360,000 square
23 feet.

24 COUNCILMAN BERRA: Okay. And is

25 **Comment 2-7**

there some way, since it's a proposed change

**Comment 2-7
(cont'd)**

in the law, to limit it so that you wouldn't
have the ability to have that many units and
Swiss Re wouldn't either?

MR. VENEZIANO: Why am I doing this?

COUNCILMAN BERRA: Well, because
there's -- there can be concerns -- there's
always some concerns about density to a
greater or lesser degree.

MR. VENEZIANO: You don't have to --
can you reduce the densities? Is that what
you're saying?

COUNCILMAN BERRA: Yeah. What the
law would allow for.

MR. VENEZIANO: Yeah. You can modify
the law.

MR. BARONI: It's your law.

COUNCILMAN DiGIACINTO: It's our law.

COUNCILMAN BERRA: I understand what
the -- I expect that would be the answer.
But I'm just trying to clarify.

MR. VENEZIANO: Yeah. That's fine.

Comment 2-7 Okay. So I would
be interested in seeing what that law would
look like if it were going to be limited to
what you currently have, you know, the --

Comment 2-7
(cont'd)

what you currently are proposing.

MR. VENEZIANO: Not the 1.25, the 1:1, that ratio?

COUNCILMAN BERRA: Whatever aspect of it would be.

MR. VENEZIANO: Okay.

COUNCILMAN BERRA: You study those laws, I think -- well, certainly for a living, and in that way more than I do.

MR. VENEZIANO: Yep.

COUNCILMAN BERRA: Okay. In terms of the traffic studies that were done, you're saying that the traffic trips that would arise under this would be less than -- and it doesn't matter for now if you said based on what currently is there if it were occupied or what could be built there. I get the basic question I have on that is whether it would be at the same times, because I think of office buildings --

Comment 10-1

MR. VENEZIANO: No.

COUNCILMAN BERRA: So it would be at different times?

MR. VENEZIANO: Yeah. I'm just going to just say there's a peak hour for an

1 office, and these uses are going to go
2 through the whole day, but they are going to
3 be at a lesser density -- you know, a lesser
4 impact. You have two cars per five minutes,
5 and, you know, you have 7:30 to quarter to
6 9:00 in the morning when MBIA was there. So
7 it would be more impactful, the office.

8 COUNCILMAN BERRA: So in some ways
9 they are countercyclical, which can be a
10 good thing with residential.

11 MR. VENEZIANO: Yeah. I think you're
12 going to find the traffic is going to be
13 spread out through the day more.

14 Am I right?

15 MR. WERNER: Yes. Traffic
16 consultant's not here tonight, but we can
17 have a formal response to that. But
18 basically the peak hours for office get way
19 more trips in the morning and the evening.

20 COUNCILMAN BERRA: Right, coming to
21 work, leaving for work.

22 MR. WERNER: Whereas the residential,
23 it's not as high and often -- it's a less --
24 the trip rate for residential is a lot less
25 than office.

1 COUNCILMAN BERRA: Roughly how long
2 is the frontage of Swiss Re? Any idea?
3 It's half a mile or something? Quarter of a
4 mile? It's long. Let's just say that.

5 MR. VENEZIANO: So it's from 22 to
6 Cooney Hill.

7 COUNCILMAN BERRA: So I would really
8 quibble with the point that you're going 55
9 miles an hour and you won't see it. Because
10 when you're going 55 miles an hour, you're
11 looking off into the distance. So just
12 because you're passing one part, and when
13 you're driving you hope your focus isn't
14 right on what's in front of you and just to
15 the side there and looking off into the
16 distance.

17 MR. VENEZIANO: So as you're driving
18 from 22 to 120 coming up the hill and going
19 down, there's a landscaped area, there's a
20 wall, there's more -- so there's quite a bit
21 there. If you want to see it and you're a
22 passenger, you can stare at it and you'll
23 see some nice buildings. But if you're
24 driving, you're going to be set a little
25 differently. You can't block it. There's a

lot of development. You're not going to not see this. But even now you can't see -- I mean you don't see these buildings unless you stop at the driveway and look in.

MR. WERNER: The whole corridor is pretty much -- the stone wall, heavily planted, you know, tall trees along the edge, buffers, that for this project are going to remain and be enhanced, so...

COUNCILMAN BERRA: Okay.

MR. WERNER: Our opinion and the EIS shows it's really not a visual impact.

COUNCILMAN BERRA: Just a few more. This is stemming, again, from your presentation, this last one, and then I'll have a few other questions. I know it's something that's been raised in scoping, addressed in DEIS, but I am really, really concerned about fire department access, not in terms of being able to go in there, and there's talk about an extra road, things like that, but in terms of having the equipment to get to the top of the building. They don't currently have that equipment. That's one of the reasons, aside from

Comment 12-3

**Comment 12-3
(cont'd)**

visibility, why I was asking what the four-story version was like, because it has two additional stories underneath aboveground. So I'm very concerned about that, and also the strains on the man and womanpower of the volunteer fire department and at some point whether we just put too much of a burden on them and can't have it entirely volunteer fire department.

MR. VENEZIANO: So it's new construction, it's probably sprinklered. But the taller building, if you don't have a hook and ladder that can get there, it's an issue, it's a valid issue.

MR. WERNER: And we have -- the community facilities analysis has a letter included in the appendices from the fire department speaking to that. And our conclusions, you know, acknowledge that and also state that the applicant is willing to, you know, contribute a fair share to something to address that.

Comment 12-3

COUNCILMAN DiGIACINTO: North White Plains is the only fire district that has a ladder truck, and they would -- their ladder

Comment 12-3
(cont'd)

truck I'm sure wouldn't be sufficient for a
seven-story building.

Comment 12-3

COUNCILMAN BERRA: Right. And
proportionality, you have to look at it in a
couple different ways. Certainly if they
get a hook and ladder truck, that's
something they can use in other places, but
they wouldn't have to spend that money
otherwise. So you've got to look at what
projects they are acquiring it for and not
simply say, We're part of the fire district,
we'll pay our proportional share and that
will cover it. It could be a significant
fixed cost.

MR. VENEZIANO: How many fire trucks
are in the beautiful fire building over
here?

COUNCILMAN BERRA: I don't know
exactly, but probably six to eight.

MR. VENEZIANO: Fantastic. Okay.

COUNCILMAN BERRA: I'm interested in
the overall economics of this in some ways.
And I'm not telling you to do this, but I'm
guessing you did in some way. When we

Comment 13-1

looked at Eagle Ridge for the hotel, there

**Comment 13-1
(cont'd)**

was a feasibility study that was provided.
And I think a lot of us -- a lot of people
generally have experience that, you know,
feasibility studies you might take with a
grain of salt given, you know, people are
hiring them and they look at it in certain
ways, not to say anything bad about
professionalism of people who spend their
lives and study doing this. But have you
done a feasibility study on the hotel here?

MR. WERNER: Yes. There's a market
study in the EIS for the whole project.

COUNCILMAN BERRA: And you referred
to the comp plan saying there's room for two
hotels, that was when we had La Quinta.

Comment 13-1 Presumably this will be at least a somewhat
greater grade than La Quinta was. But what
happens, Eagle Ridge goes ahead, they
actually build a hotel. Does that impact
you?

MR. VENEZIANO: You know, La Quinta
had the contract with all of the pilots and
stewardesses. And we're in a good location
near the airport. I would say a preferred
lo -- they should be maybe hitting different

1 markets a little bit. I haven't been
2 tracking the IBM deal. But this site should
3 work out pretty well for people that want to
4 travel.

5 COUNCILMAN BERRA: Okay. But the
6 study supports that for you and you've
7 looked at what happens if Eagle Ridge opens
8 up a nice hotel? I'm guessing you won't go
Comment 13-1 ahead with it unless you think the economics
9 work. But I'm just trying to probe a little
10 bit.
11

12 MR. WERNER: We do acknowledge the
13 Eagle Ridge project in several places in the
14 EIS. I can get back to you on that
15 question.

16 MR. BARONI: The purpose of the DEIS
17 is for the board and the public to ask
18 questions, but not to have a dialogue.
19 You're to ask your question, and then
20 they'll take that when they get the
21 stenographic record and they'll answer your
22 questions in the FEIS. That's the proper
23 way of going about it.

24 COUNCILMAN DiGIACINTO: Thank you,
25 Roland.

1 MR. BARONI: So ask as many questions
2 as you want, but the dialogue really doesn't
3 fit.

4 COUNCILMAN BERRA: That's fine, and
5 I'll respect that. It is improper to do it
6 that way, though?

7 MR. BARONI: Yeah, it's unusual to
8 have a dialogue back and forth. You're
9 supposed to ask your questions, the
10 applicant will note them, the
11 stenographers's got them, and then you'll
12 get an official response, and then you can
13 conclude whether or not it's adequate
14 enough. And if it's not adequate, then you
15 will never deem the FEIS a complete
16 document.

17 COUNCILMAN BERRA: So that's fine. I
18 can live with that. But unusual, not
19 prohibited?

20 MR. BARONI: It's contrary to the
21 SEQRA regs. But, you know, I don't think
22 "prohibited" is the correct word. I just
23 think it's incorrect.

24 COUNCILMAN BERRA: Okay. I'm

25 **Comment 13-2** wondering, same way I'm wondering about the

Comment 13-2
(cont'd)

demand for the hotel and the need for it,
the office space. You guys have been
trying -- the owners have been trying to
rent out the office space for some time.
I'd be curious to know -- and I'm sorry if
some of this is addressed already, but it's
hard to keep it all in mind, especially if
you look at multiple projects -- I'd be
interested in knowing what the use would be
of the office building, whether -- what type
of tenants, multiple tenants, single
tenants, still to be determined, and also to
know whether there have been studies done on
that, given the history of not being able
to --

MR. VENEZIANO: I mean, the studies.
MBIA tried to lease the place for six or
seven years before they left, and we've
owned it for five or six and there's no
tenants, so...

MR. BARONI: We're doing it again.

MR. VENEZIANO: Yeah. Okay.

MR. BARONI: Just reserve your
answers for the document.

MR. VENEZIANO: All right. We'll sit

down. I was just trying to accommodate the question.

COUNCILMAN BERRA: That wasn't my fault. Tony's just trying to be constructive.

So thank you for that.

MR. VENEZIANO: We can have a chat.

COUNCILMAN BERRA: I have a concern -- well, similar question for the demand for the residential. You know, what shows that it's feasible. I'd just like to understand the overall economics, and that projects are realistic. Not saying to what degree, if any, that impacts the ultimate decisions. But I'd like to understand the big picture. And I think it's helpful for people and our residents to know that.

Comment 13-2

One thing I've seen is that -- and this is -- I can cite to page 1-5 in the Executive Summary. This relates to -- don't say anything this time, please. This relates to the notion that -- what do you call it, the Cooney Hill section? Where there were 17 residences, and now the basic proposal is to have 22 townhomes, and it

Comment 13-2
(cont'd)

could expand beyond that, right?

It says here in the bottom paragraph of the Executive Summary, Section 1.B.3 on page 1-5, when it talks about the conservation easement, it says, A portion of the conservation easement area was to be irrevocable in the form of a 50-foot deep, approximately 1.95-acre strip of property immediately adjacent to the DEP property. The balance of the conservation easement area (approximately six acres) was to be revocable if two conditions were met as follows: (i) MBIA has not constructed both

Comment 3-1

the proposed office building and the associated parking structure. That seems like it's met. And (ii), MBIA sells the Cooney Hill lots to a third party for a standalone development.

So what I have trouble seeing, and I don't have obviously the whole agreement in front of me, but -- it might be in here. I forget if it is. MBIA sells the Cooney Hill lot to a third party for standalone development. It doesn't seem like MBIA sold the Cooney Hill lots to a third party for a

Comment 3-1
(cont'd)

standalone development. They sold both pieces, and -- I don't know if you're supposed to say anything but --

MR. BARONI: Tony, you've got to put it in the FEIS.

MR. VENEZIANO: I know but I can address -- this is wrong. It's not a --

MR. BARONI: But it's a question that's adequately asked and you have to respond to it. Because this is all going to get lost. If you start answering now, you won't put it in your document.

MR. VENEZIANO: I understand.

COUNCILMAN BERRA: And I've just got a couple more, just jump through them.

It may be in there already, but a sense of what the residential units will sell or rent for, because one of the things that's discussed, I think it was in the presentation, is that it will help people who can't afford a single-family home, and some of the prices we're seeing both at Eagle Ridge and some other places I don't think helps those people.

Comment 13-3

Comment 11-1

I'm going to want to understand,

**Comment 11-1
(cont'd)**

because I said before I think there are inherent limitations in visualizations. I don't think you've done a drive-by visualization, but you have the other ones. But, you know, professionals, I'm sure, know that there are certain limits to them and what they -- different factors are that go into it and what they try to compensate for or whatever. So if there's same way to get input on that, it would be appreciated.

Comment 2-1

And then I also have been refining my thinking on this thing, this aspect of it, because sometimes we hear that an applicant's baseline is what's been approved, even though it hasn't been built. Now, I've said numerous times I want our businesses, our developers, to do well. But our primary concern is what's good for the town, and we want to understand that.

So the world changes. And Eagle Ridge is an example. They were approved for a 300-room hotel. They said, We can't build it. So we've got to come here. And they proposed that the baseline, out of a sense of fairness, at least some people have said,

**Comment 2-1
(cont'd)**

should be what they were approved for and go from there.

Similarly, you're saying something like that here, I believe. Not to put words in your mouth. But, you know, if the world changes for a property owner and they find that they can't go ahead and feasibly build what was approved, I would submit that it at least merits consideration that as the world evolves, as there's more buildings in town, circumstances change, so you have COVID, you know, all these crazy things that can happen, you know, things can change for the town in evaluating too. So I wouldn't just automatically start with the base that, Hey, what was there before, it's only fair that we go there. The world changes. If it changes for one party, reasonable that you would say that it changes for the other party as well.

And that's all I have for now.

COUNCILMAN DiGIACINTO: I'm going to reserve my comments. I believe what Councilman Reiter said earlier, I'd like to wait until we have a full board and

Supervisor Shiliro is here. So I will wait until our next meeting.

MR. BARONI: I just have a couple comments after Saleem.

COUNCILMAN DiGIACINTO: I'm sorry. I forgot.

COUNCILMAN HUSSAIN: No problem.

I actually just have one question and then one comment.

The question was actually on I think it's 13B1 in the document, is the market assessment.

COUNCILMAN BERRA: What page is that?

COUNCILMAN HUSSAIN: It's -- what page?

COUNCILMAN BERRA: If you don't know, that's fine.

MR. BARONI: 13-1.

COUNCILMAN HUSSAIN: It would be Section 13 under 1. I don't have page numbers.

COUNCILMAN BERRA: Okay.

COUNCILMAN HUSSAIN: In that section -- actually, let me read you one

Comment 13-1 part. It says, Currently North Castle has

Comment 13-1
(cont'd)

one place of accommodation open to the public, La Quinta.

I will stop reading now.

Comment 13-1
(cont'd)

I think one thing that might be useful is the demand equation is really important here for us to understand. And that's changed a ton the last two years. So I'd just ask that you redo that section, you know. Or provide commentary on top of that section to indicate what changes exist, and then what you think we should think about given those changes, especially as it relates to the alternate options that you also looked at. Because I just need to make sure I understand how it relates in terms of that logic, you know, because a lot of the base foundations of what you're proposing rely on the demand that you expect. So that's something we need to understand.

And then the only comment I was going to make was right now, for me, I feel like there's a lot of information here, and I'm just in data collection mode.

So fully support, Jane, your comment. Would love to do a formal referral and get

more and more viewpoints on what questions we need to ask. And that's what I think we need to do in the next few weeks.

That's it.

COUNCILMAN DiGIACINTO: Thank you.
Roland?

MR. BARONI: I just had a couple of things.

Comment 13-4 In the Fiscal Impact section, it's noted that Cider Mill/Whippoorwill Hills/Whippoorwill Ridge comprise 100 units approximately. It's more like 230. So that should be corrected.

Comment 13-1 And then picking up on Saleem's comment, yes, La Quinta is closed permanently, and I think Arrowwood is as well. So that should be more accurately reflected in the FEIS.

Comment 2-4 And lastly, I didn't see any reference in the document to affordable housing, which also has to be complied with under the model ordinance.

COUNCILMAN BERRA: Roland, can I ask you another procedural question? I don't object to it, but we have a stenographer

1 here. What purpose does a stenographer
2 serve in this given that things are
3 recording? Is it to have a more official
4 transcript?

5 MR. BARONI: She's accurately
6 reflecting your questions so that it can be
7 answered adequately in the FEIS. That's the
8 purpose.

9 COUNCILMAN BERRA: I would think
10 that's -- unless I'm not speaking well
11 enough into the microphone, which I'm making
12 a real effort to now. But in some ways it
13 seems like that's historical, because maybe
14 in the past we didn't record it. But it's
15 the way things are done.

16 MR. BARONI: Well, Eagle Ridge had a
17 stenographer present every time we had the
18 hearing on the environmental as well.

19 COUNCILMAN BERRA: I don't object to
20 it. I'm just a little bit curious.

21 MR. BARONI: That's the purpose,
22 though, so that your questions are
23 adequately --

24 MR. KAUFMAN: Just to clarify, José,
25 that is the record I'm going to use to

1 identify the questions that were asked. So,
2 you know, we can't watch the meeting to do
3 that, so we need an actual document.

4 COUNCILMAN BERRA: And then does
5 someone look at the transcript and make
6 sure --

7 MR. KAUFMAN: Yes. That's what I'm
8 saying.

9 COUNCILMAN BERRA: I mean, does
10 someone review it and say, I'm not sure it
11 said that?

12 MR. KAUFMAN: We have exactly --
13 that's why we have a stenographer, it's
14 exactly what's being said. Then we review
15 it, we categorize each comment, and we make
16 sure that it's incorporated into the FEIS.

17 COUNCILMAN BERRA: Thank you.

18 And since you charge by the word,
19 that probably helped.

20 MR. BARONI: That's all I have.

21 COUNCILMAN DiGIACINTO: All right.
22 Thank you.

23 All right. At this time if no one
24 has anything else to say, we could --

25 Tony, did you have anything else?

1 MR. VENEZIANO: No. You had
2 mentioned that you were going to adjourn the
3 hearings. And I just wanted -- we talked
4 about doing the first meeting in September.
5 And I don't know if you have a way of
6 noticing, if you just adjourn it without a
7 date certain, it becomes -- you have to have
8 another meeting to set the hearing, and that
9 would be a waste of a few weeks.

10 MR. BARONI: I believe it is being
11 adjourned to September. What I'm confused
12 about is the comment period that you list
13 may not coincide with what the lead agency
14 decides to do.

15 MR. VENEZIANO: So we can adjourn,
16 then.

17 MR. BARONI: That may be a later date
18 depending on when they close the public
19 hearing.

20 COUNCILMAN DiGIACINTO: So that's
21 obviously flexible, that September 30 date.

22 MR. BARONI: Oh, definitely. But the
23 hearing being -- the two hearings being
24 reconvened, that would be the first meeting
25 in September, is that what you're proposing?

1 MR. VENEZIANO: Yes.

2 MR. BARONI: I think that's what the
3 town would probably want to do.

4 COUNCILMAN DiGIACINTO: I would think
5 so. Okay.

6 Roland, so at this time we should --

7 MR. BARONI: Adjourn both public
8 hearings to that September date.

9 COUNCILMAN DiGIACINTO: And we also
10 want to make a formal request --

11 MR. BARONI: Formal referral to the
12 conservation board of the DEIS document.

13 COUNCILMAN DiGIACINTO: All right.
14 So I need a motion to adjourn both public
15 hearings.

16 COUNCILMAN HUSSAIN: I will make that
17 motion.

18 MR. REITER: Second.

19 COUNCILMAN DiGIACINTO: All in favor?

20 (The motion was unanimously passed.)

21 COUNCILMAN DiGIACINTO: And then I
22 need a motion to make a referral to the
23 conservation board.

24 COUNCILMAN BERRA: I'm sorry, do we
25 specify the date that we're adjourning it

1 to?

2 MR. BARONI: The first meeting in
3 September.

4 COUNCILMAN BERRA: September 9.

5 COUNCILMAN DiGIACINTO: September 9?
6 Okay.

7 COUNCILMAN HUSSAIN: And I will make
8 the motion to refer.

9 COUNCILMAN BERRA: I'll second that.
10 And thank you for being here on
11 behalf of the Conservation Board, Jane.

12 COUNCILMAN DiGIACINTO: All in favor?
13 (The motion was unanimously passed.)

14 MR. VENEZIANO: Thank you very much.

A P P E A R A N C E S:

CHAIRMAN	MICHAEL SCHILIRO
COUNCILMAN	BARBARA DiGIACINTO
COUNCILMAN	JOSÉ BERRA
COUNCILMAN	SALEEM HUSSAIN
COUNCILMAN	BARRY REITER

KEVIN HAY, TOWN ADMINISTRATOR

ADAM KAUFMAN, DIRECTOR OF PLANNING

ALISON SIMON, TOWN CLERK

1 SUPERVISOR SCHILIRO: So we have two
2 hearings. The first one is regarding 113
3 King Street, otherwise known as the former
4 MBIA property and then the Water District,
5 number 8 in New King Street. I just want to
6 ask a quick question, nobody is here for --
7 item Miscellaneous I, which is the late
8 addition regarding the Extension of the
9 Temporary Outdoor Dining, is anybody here
10 for that? Okay. In case I needed to move
11 it up. So let's start with the first public
12 hearing.

13 Reconvene the following public
14 hearings regarding the proposed Airport
15 Campus development, 113 King Street. First
16 is we are still open to provide comment on
17 the DEIS and DGEIS, and also to consider the
18 local law. Both of this will be adjourned
19 tonight, and the third is the receipt of
20 letter from Jen Lamia.

21 So could I have a motion to reconvene
22 that public hearing.

23 MR. BERRA: I make that motion.

24 MS. DIGIACINTO: Seconded.

25 SUPERVISOR SCHILIRO: All in favor.

1 MR. REITER: Aye.

2 MS. DIGIACINTO: Aye.

3 MR. BERRA: Aye.

4 MR. HUSSAIN: Aye.

5 SUPERVISOR SCHILIRO: And then a
6 motion to receive the letter from Jen Lamia,
7 Superintendent of Schools Byram Hills School
8 District.

9 MS. DIGIACINTO: I make that motion.

10 MR. HUSSAIN: Seconded.

11 SUPERVISOR SCHILIRO: All in favor?

12 MR. BERRA: Aye.

13 MS. DIGIACINTO: Aye.

14 MR. REITER: Aye.

15 SUPERVISOR SCHILIRO: Great.

16 Counselor.

17 THE CLERK: And the --

18 SUPERVISOR SCHILIRO: Oh, I'm sorry,
19 Alison. Correspondence, maybe one day I'll
20 learn.

21 THE CLERK: The correspondence was
22 received since -- this is the correspondence
23 that was received since the public hearing
24 was opened on July 28th. A letter from Jen
25 Lamia, Superintendent of Schools Byram Hills

1 School District, dated July 23, 2021; and
2 the proposed local law for consideration.

3 SUPERVISOR SCHILIRO: Great. Thank
4 you.

5 MR. VENEZIANO: Good evening. My
6 name is Tony Veneziano, I'm here on behalf
7 of Airport Campus to continue this hearing
8 on a -- to continue the environmental review
9 of our EISs.

10 At the last -- Steve Wise is here
11 with Jeff Wrangler. Steve's a partner and
12 Jeff and the project manager, Aaron Warner
13 is here from our environmental planner. So
14 at the last meeting we sort of got into it a
15 little bit of different questions back and
16 form and Roland actually had to tell us a
17 few times that the record is gonna look kind
18 of screwy, because it was an ongoing
19 dialogue between myself mostly and some
20 other people. So --

21 MR. WOODYARD: Can you speak louder,
22 please.

23 MR. VENEZIANO: Okay. So tonight we
24 are going to listen to the questions, since
25 the purpose of the hearing is to receive

1 public input.

2 SUPERVISOR SCHILIRO: Correct.

3 MR. VENEZIANO: So we'll allow your
4 Board to speak. We'll -- if you need us we
5 are right here and we can answer questions
6 and provide some guidance, but otherwise the
7 stenographer is over there so if anyone
8 comes up if they can provide their name and
9 address, whatever, that would be
10 appreciated. Okay?

11 SUPERVISOR SCHILIRO: Thanks Tony,
12 and to reiterate and I'm going ask Adam to
13 come up and say whatever I missed is exact
14 pretty much what you said, is this
15 opportunity at the DEIS level is to provide
16 feedback for the applicant and to provide
17 any questions and other things that may need
18 studied, and the stenographer is here to
19 take exactly what that is so there is a
20 record of it and if there is things that the
21 community or the Board feels needs to --
22 needs further study beyond what our
23 professionals may have said, that's what
24 this process is for. Do you want to add to
25 that? I didn't say it completely right.

1 MR. KAUFMAN: That's essentially
2 correct. What we are doing is having
3 comment on the DEIS document. So whatever
4 comment we receive from the Board, from
5 other involved agencies, which I expect
6 we'll get because the written comment period
7 is over until the end of September, and at
8 these hearings will be collected and then
9 will be responded to in a document called an
10 FEIS.

11 SUPERVISOR SCHILIRO: Right.

12 MR. KAUFMAN: And that's how we'll
13 get the answers.

14 SUPERVISOR SCHILIRO: Correct, and a
15 written form example is the letter from the
16 superintendent.

17 MR. KAUFMAN: Right. That's right.

18 SUPERVISOR SCHILIRO: With specific
19 concerns and questions, etc.

20 MR. KAUFMAN: Exactly. So we'll
21 break that communication down and all of
22 those points that are in that letter will be
23 responded to in the FEIS.

24 SUPERVISOR SCHILIRO: Correct. And
25 just to remind the public at home and

1 anybody here, this isn't the hearing that we
2 are determining the decision on the zoning,
3 this is still the study of the project.

4 THE SPEAKER: Both those hearings are
5 running concurrently.

6 SUPERVISOR SCHILIRO: And providing
7 comment on their study. They are, but --

8 MR. KAUFMAN: But essentially what I
9 anticipate is you'll close the hearing on
10 the DEIS tonight and wrap up the comment
11 period at the end of September. The
12 applicant will then start working on those
13 responses and then you'll adjourn the zoning
14 hearing until later.

15 SUPERVISOR SCHILIRO: And I am not
16 sure, we'll -- we may adjourn the DEIS
17 speeches because of the timing, but -- and
18 we are not restricted by the timing of
19 number of days, are we? As far as
20 adjourning or closing?

21 MR. KAUFMAN: There is no time limit
22 on the hearing necessarily.

23 SUPERVISOR SCHILIRO: Okay. Just
24 because for the community purposes you can
25 comment Tony, you know. We started this at

1 the end of July, obviously through August
2 people aren't really around and then we're
3 back, just hit Labor Day and schools just
4 started so we just want to give the right
5 opportunity to comment, that's all.

6 We know they can do a written
7 comment, but we just want to make sure that
8 there is a fair opportunity for people and
9 nobody feels that they didn't --

10 MS. DIGIACINTO: We rushed it.

11 SUPERVISOR SCHILIRO: -- yeah. So we
12 had talked about not opening the hearing
13 until now and so we are not trying to slow
14 it down, we just want to make sure we hear
15 from the public.

16 MR. VENEZIANO: So when we had that
17 conversation I indicated that over so many
18 decades of hearings up here, there aren't
19 many impacted neighbors. I think the school
20 board letter addresses one issue which could
21 be children coming out of this site.

22 So I rather close the hearing
23 tonight, but if it's going -- as long as
24 there is a meeting right after the 30th
25 where you could close it, that will be fine,

1 your first meeting in October or whatever.
2 And if there are a lot of comments, I think
3 Adam is right, it can go on for seven
4 months.

5 SUPERVISOR SCHILIRO: Our next
6 meeting is in 13-days.

7 MR. VENEZIANO: Okay, that's good.

8 SUPERVISOR SCHILIRO: So we can close
9 it tonight or the next meeting is the 22th
10 or something.

11 THE CLERK: September 22nd.

12 MR. VENEZIANO: Okay.

13 SUPERVISOR SCHILIRO: Okay, thank
14 you.

15 MR. BERRA: And Adam, on something
16 Adam said. Is it correct to say that you
17 referred to the DEIS and the FEIS but, in
18 fact, they were standing for Draft
19 Environmental Impact Statement and Final
20 Environmental Impact Statement for the
21 people who don't know the acronyms, but we
22 also have a Generic EIS. So it's gonna be
23 the same process for that.

24 MR. KAUFMAN: Yes, they are
25 essentially a combined document.

MR. BERRA: Thank you.

SUPERVISOR SCHILIRO: What I thought I would do, if the Board is okay with it is, does everybody want to hear from the public first perhaps, and then we can make our comments? Instead of them having listen to us. So if anybody is here, I don't know if we have a list Alison or if not.

THE CLERK: I one. I have Edward Woodyard.

MR. WOODYARD: I just want to hear what you have to say and then --

SUPERVISOR SCHILIRO: Oh, okay. Anybody else that is here from the public that doesn't want to wait to hear us? Okay. So since we started with you before why don't we start with Jose now and we'll work our way this way.

MR. BERRA: Okay. I had made a series of comments last time and I know that those were taken down and there was a little bit of back and forth. I understand, I explained well why it is not desirable for this process. So what I am gonna focus on, I didn't have a chance to go back and look

1 at that, watch that meeting and see what I
2 covered, I didn't write my notes exactly.

3 So I am going to say a bunch of
4 comments for the next hearing in all
5 likelihood. But I think it is important to
6 comment on Jen Lamia's letter where -- it is
7 actually very well written and supported in
8 terms of how the figures that are being put
9 forth by the applicant may not be accurate,
10 and where, in fact, there could be a lot
11 more students coming out of this, and also
12 interestingly it is easy for somebody to
13 say, well, we have a cost per student, it's
14 easy to think this way, it's just pretty
15 natural that we have a cost per student of
16 such and such dollars. So I think the
17 numbers that are described in the
18 applicant's proposed -- submission, is
19 between 20 and 27. But what Jen points
20 really well, which is interesting for me is
21 that, it is not linear like that because it
22 is not evenly distributed and you can have
23 more kids in a certain age group that can
24 lead to hiring extra teachers and there
25 could be other cost that relate to it. So

Comment 12-7

1 it's not accurate to really -- you have to
2 be very careful in concluding how much the
3 extra cost it's gonna be for having all
4 those students.

5 And I think it is worth for
6 everybody, all interested parents to look at
7 it. She's also pointed out as I was saying
8 before how the numbers of students may well
9 not be accurate and that's one thing I
10 thought about before, I know I've raised it
11 before and I think there may have been some
12 sort of response to it, but I think it is
13 important that we go back in time.

14 Primarily for our community because
15 we know that the schools are very desirable
16 in this town and that's what attracts a lot
17 of people here. So maybe the standard
18 formulations may not be appropriate for us.
19 That's a point that Jen made in terms of
20 saying the standards that are being used are
21 the same in different localities, I think she
22 said, Buffalo, New York City and one other
23 place and you can well imagine all the
24 differences.

25 So I think one thing that might be

Comment 12-7

helpful to us is to request that we get some
sort of analysis that the developments that
are taking place here and maybe in
comparable localities, maybe we can figure
out which one those should be to see what
the anticipated number of additional
students were from a project and then see
what actual -- the actual numbers were in
the --

SUPERVISOR SCHILIRO: You are talking
about in our own town or in general?

**Comment 12-7
(cont'd)**

MR. BERRA: Our own town
specifically, I would look at that. I would
look at Old Route 22 even, which are big
developments in numbers there, but also
looking at comparable localities and we can
figure out which one those should be. So I
think that would be important information
for us to --

SUPERVISOR SCHILIRO: What do you
neighboring? You mean neighboring
communities?

MR. BERRA: Yes, what I said?

SUPERVISOR SCHILIRO: No, I just want
to make sure I --

1 MR. BERRA: No, I --

2 SUPERVISOR SCHILIRO: Our community
3 and then sort of like communities.

4 MR. BERRA: Yes.

5 SUPERVISOR SCHILIRO: Okay, got it.
6 I agree.

7 MR. BERRA: So that could be very
8 useful to us. As I said before, and I will
9 go back and look at my comments from last
10 time so I don't duplicate them, but even
11 though I support this project I think it is
12 a good location, I think in a lot of ways
13 it's a better location for some aspects of
14 it then Eagle Ridge, it won't make the town
15 as crowded, but I think we have to -- the
16 people will be coming here but they won't be
17 right here. So I think that could be more
18 desirable.

19 I am concerned about the density of
20 it and I'm concerned about the height,
21 things that I've said all along and
22 particularly on one of the alternatives I
23 really am concerned about the possibility
24 that 52 townhomes will be considered there

25 **Comment 3-1** at 22. I took a lot of comfort from the

Comment 3-1
(cont'd)

fact that River Keeper and Natural Resources
defense counsel had reached an agreement
where that wouldn't be done and now I
understand the position is as it was
mentioned the last time, that the Deed
restriction on that part of it according to
the applicant isn't really something that
applies any longer and I question that,
whether that really should be the case. But
I will just point that, I think that's some
of the key concerns for me and there are a
number of others ones here too, but that's
all I will say for now.

SUPERVISOR SCHILIRO: Okay.

THE CLERK: I just also wanted to
point out, I was looking at the wrong list
and Matt Milim also signed up. I don't know
if you want to wait for everybody.

SUPERVISOR SCHILIRO: Matt, do you
want to wait? You can go if you want to
speak first.

MR. MILIM: I don't mind waiting. I
can go at the end. Thank you.

THE CLERK: Sorry about that.

MR. MILIM: No problem.

SUPERVISOR SCHILIRO: Okay, do you have anything to add?

MS. DIGIACINTO: I do. I have quite a few comments and I am going to start I think with the same topic that Jose did, the impact on the Byram Hills School District. And I'm very, very concerned about the impact, and I read very carefully Dr. Jen Lamia's letter, she's the Superintendent of schools, and I sort of used her letter to motivate me to come up with and some of the things, I'm going to be a little more specific on some of the points that Jose just raised.

My first point -- and this by the way, this comes from Chapter 12, Community Facilities I would think would be the appropriate chapter. My first point is that the record multiplier method, and I'm citing from page 12-5 of Chapter 12, is based on data for 2000 census and the 2005 housing crisis and I really would like to see this multiplier applied to current census and a current housing crisis.

The -- I did a little research and

Comment 12-7

there is something that the applicant -- I would like the applicant to look into, it is using the public use micro data sample. And this basically is data that you can almost customize these projections in terms of population, housing crisis costs, etc. I think that would be really very, very useful and it is my understanding that the data is rather current. No, I haven't done this myself, so I am just sharing what I read.

Comment 12-7

My second point is the -- "the case study method of estimated school age children, focused on schools located in lower Westchester." And these districts are not anywhere similar to the Byram Hills School District. They used data base in enrollment for 2015 and 2016, and 2018/19 and then it said where available. So I question if the data is really as complete as we would need.

Comment 12-7

We need complete enrollment data from September 2015 up to and including September 2021 from school districts as Jose mentioned before that are similar, you know, most likely northern Westchester school

districts.

Number three, and this is what Jose talked about generally. I would like the

applicant to provide a study of the number of students residing in townhomes, in

Comment 12-7 condominiums located in Armonk, Whipporwill

Hills, including the MIUs, Whipporwill

Ridge, including the MIUs, Cider Mill and

Armonk Square, including the MIUs,

Whippoorwill Commons, including MIUs,

Leisure Farm, approved Eagle Ridge,

including MIUs. 470 Main Street

Condominiums, including MIUs. Approved 16

units senior housing located on Route 28.

SUPERVISOR SCHILIRO: Route 128.

MS. DIGIACINTO: I'm sorry, Route

128. The study of these different

developments I would be very interested in

finding out what was the projected number of

school age children identified in the DEIS.

I would like to -- when each project was

Comment 12-7 completed all residential units sold, the

number of school age children enrolled in

the Byram Hills School District from these

developments.

1 MR. BERRA: And Barbara, you are in
2 agreement doing it year-by-year?

3 MS. DIGIACINTO: Yes, absolutely. To
4 date, meaning September 9th, 2021, the
5 actual number of school children in the
6 Byram Hills School District and I would like
7 that number compared for the last four years
8 in the Byram Hills School District.

Comment 12-6

9 And we already -- and I think this is
10 really interesting. This school year they
11 have 100 more children than projected and we
12 can't point to a brand new development. It
13 is existing housing that has been sold and
14 people are moving in with young families,
15 and as the supervisor said, Jose has said,
16 our town, you know, we don't have a train
17 station, we are not on the Long Island
18 sound, but we have one special school
19 district and really is a tremendous draw.
20 So again, enrollment is very important to
21 me.

22 Point number five, to provide data
23 obtained from the Byram Hills School
24 District of the estimated expenses for the
25 school district for the alternative plans in

Chapter 18 of the DEIS. The school district's expenses should include but not limited to cost per student to educate, staffing, employee benefits, number of sections, school buses and cost to operate them, etc.

SUPERVISOR SCHILIRO: Barbara, could you repeat how you started that, the first line of that point you were just making?

MS. DIGIACINTO: Provided data obtained from the Byram Hills School District, the estimated expenses.

SUPERVISOR SCHILIRO: Estimated expenses projected.

MS. DIGIACINTO: Yes, and for the alternate plans in Chapter 18.

SUPERVISOR SCHILIRO: Right.

MS. DIGIACINTO: My point number six;

since the proposed legislation would allow the entire 113 King Street parcel to become 100 percent residential, this too should be included as an alternate therefore we need the potential maximum number of residential units, number of bedrooms, types of residential units, projected number of

Comment 18-1

Comment 18-1
(cont'd)

school children. And I think this is really a very, very important point because the way the proposed legislation that is proposed by the applicant, this parcel, which I believe is 36 acres could be 100 percent residential.

Point number seven. If the town were to rezone 113 King Street property, the zoning amendment would apply to the 126 acres Swiss Re parcel. Please provide the same data as requested above in number six.

And finally --

SUPERVISOR SCHILIRO: So you are asking for the same data as applied to Swiss Re.

MS. DIGIACINTO: That's correct.

SUPERVISOR SCHILIRO: Okay.

MS. DIGIACINTO: And number eight, and I think this is something that is very, very important to anyone who resides in North Castle, and Armonk, and Bedford, Banksville and we are paying our school taxes to the Byram Hills School District. The proposed plan will provide the Byram

Hills School District with a net revenue of \$291,870.

Comment 12-8

The Byram Hills School District has expressed a concern in the quote that Dr. Lamia made, "current tax payers will be impacted by an enrollment increase." And that's a very nice way of saying our school taxes could increase and the -- we have many people in this town that I fear would not be able to stay here if that were the case.

So those are my comments in terms of the school, I and started with the school because that really is one of my most important concerns. I am going to move on to Chapter 13, which is Fiscal and Market Impacts. And on page 13-5, if you would please if you review this section which is 13B1C, Hotel Update, it cites La Quinta and other hotels that are now closed so

Comment 13-1

obviously that should be updated and to update the last paragraph dealing with Eagle Ridge now that that has passed.

SUPERVISOR SCHILIRO: What was that? B1C, did you say?

MS. DIGIACINTO: It's B1C.

SUPERVISOR SCHILIRO: Yeah.

MS. DIGIACINTO: And page 13, same chapter 13, page 13-16, the final paragraph, 13E, cites in quotes, "Theoretical build out for Airport Campus and Swiss Re, 750 residential units and an 80 room hotel."

Comment 2-7 This is the equivalent in terms of the number of residential units more than two Windmill Farm developments, therefore I wish to see the proposed local law revised so it eliminates Section 4, which is Chapter 355 of our local law, Sections B and C and D, dealing with conversion.

And in terms of Section E, I would like to see a change to the limited maximum height to three stories inclusive of parking in building for multi-family buildings.

Comment 3-2 Section 5, I would like to add to the permitted uses, and this is my favorite, a sports -- this is one of my favorites, a sports complex. I would love to see

Comment 2-3 something that does not exist anywhere in our vicinity. I am talking about indoor ice rink, indoor pool, indoor fields, outdoor fields. I mean tennis courts, indoor,

**Comment 2-3
(cont'd)**

outdoor, something that people will draw if
you've got -- you're right off 684, the
people -- as it is, people drive to Brewster
to go to Brewster ice hockey and they have
to go there for 5:00 o'clock in the morning.

I just think that parents and
rightfully so, are very, very devoted to
their children, they are very devoted to
their children's needs. They see sports as
a very, very important part of not just
daily life but character building and I
think that this should definitely be an
added permitted use and I think it could be
a very, very successful one. Particularly
if you could get a licensing agreement with
some retired famous football player, or
whatever, you would have people you know, I
think breaking their necks to come here.

Comment 2-3

I would also like to add a skilled
nursing care because I believe you just have
in the zoning senior housing and assisted
living. And I was reading about something
the other day that I was thinking would
really would be a good idea for your
project, and that is where you would -- it

1 would be -- the entire parcel would be
2 devoted to seniors and there are so many --

3 SUPERVISOR SCHILIRO: Are you talking
4 about any parcel in that would be zoned this
5 way or any parcel.

6 MS. DIGIACINTO: This way, maybe even
7 just this parcel or any parcel zoned this
8 way. But you have the -- there is one in
9 San Diego and they have -- it is for 55 and
10 older, but they have houses in which they
11 are single-story houses, they have floor
12 plans where you can get one with
13 three-bedrooms, two-bedrooms, one-bedroom
14 and you live as independently as everyone of
15 us in this room are living right now.

16 And then they have the assisted care,
17 and then they have the memory care and then
18 they have the skilled nursing care. So it
19 is just -- it's a very nice progression as
20 one ages, we don't anything like that in our
21 area and obviously for the seniors that are,
22 are very you know, young for their age they
23 have everything you know, from swimming
24 pools to gyms, to yoga studios, you know
25 putting greens, golf courses, I mean, I

think it would be a wonderful plan for that site and obviously it would have zero impact on our schools.

Chapter 10. Transportation. I

request that you include a table similar to table 10-1, which is Site Generated Traffic Volume Comparisons. And if the entire

Comment 10-1

parcel were to be residential I would like

to see a table showing those traffic

volumes. Provided further specifics

mitigation measures as well as modifications

Comment 11-2

such as increase setbacks and reduction of

building height in order to reduce the

visual impact from King Street.

Chapter 19 --

SUPERVISOR SCHILIRO: Can you stop for a second, I just want to write a note on that last comment.

MS. DIGIACINTO: Sure.

SUPERVISOR SCHILIRO: Okay. Thank you.

MS. DIGIACINTO: Okay, you're welcome. Chapter 19. And I must say it was one of the most disappointing chapters, it is the shorter chapter and it's Chapter 19

Comment 19-1

is entitled Unavoidable Adverse Impacts. It is just one short paragraph. I think there needs to be a much more specific expansion on the Unavoidable Adverse Impacts on the proposed zoning amendment and proposed local law as it applies to all three parcels in the DOB 20A zoning district.

Chapter 12. Community Facilities and Services. Page 12-12 cites, "Likely the town will need to hire additional police personnel," and the cost quoted all in for a new hire on the police force is \$153,266. The DEIS cites the proposed project was expected to increase tax revenue for the town by \$228,615 and the quote in this section is "Which would be more than sufficient to cover the portion of the increase in North Castle PD cost attributed to the proposed project."

Comment 12-2

I think that we need -- I thought that this particular part of the study was a little light in terms of the financial impact on our police department so I would like to see perhaps more interaction with Chief Simonsen to have a better

**Comment 12-2
(cont'd)**

understanding of how this project could impact the need for perhaps even -- and it is not just hiring one police officer, it is perhaps hiring another police car and all the other things that go along with being a police officer.

Comment 12-5

I also ask, as I've asked before, to provide the specific additional expenses if this project were to be 100 percent residential because obviously we certainly would need more than one police officer.

SUPERVISOR SCHILIRO: Additional town expenses.

MS. DIGIACINTO: Yes, sir. Page 12-10, presently the Armonk Fire Department has one contracted EMT working from 6:00 a.m. to 6:00 p.m. What is the cost all in for this EMT and I would like the Armonk

Comment 12-4

Fire Department to comment on the need to hire additional EMT or EMTs if this project were to be approved.

Comment 12-1

Page 12-11. The charter entitled Propose Project Residential Population Projections 2006 source. I think we should have a more current source that meets our

Comment 12-1 demographics. Page 12-14 --
(cont'd)

SUPERVISOR SCHILIRO: Wait, what was that? 12 what?

MS. DIGIACINTO: That was 12-11.

SUPERVISOR SCHILIRO: Eleven, okay.
Got it.

Comment 12-3 MS. DIGIACINTO: Page 12-14. Armonk Fire Department indicated they will need a new ladder truck. Armonk Fire Department should indicate the exact ladder truck they would need, they come you know, in all different sizes in terms of their ladder extensions, the cost of the truck, the ability to house it. The applicant has stated in terms of a dollar amount, "Applicant is willing to contribute fair share for the purchase of a ladder truck." I would like a more specific dollar amount.

The Armonk Fire Department and applicant agree the project will result in an increase of call volumes, I mean, that's obvious, as well as a need for more volunteers. Unfortunately, and this is true of any project, when we have a project where it is going to be multi-families moving in,

unfortunately we don't even have one new volunteer from that project, which is unfortunate.

SUPERVISOR SCHILIRO: That's true.

MS. DIGIACINTO: So it is not an easy task if we need more volunteers to get them.

Comment 12-3

If this project results in the need to hire paid fighters, the applicant indicates a willingness to "contributing its fair share to the fire district inclusive of district wide initiatives that may be undertaken in the future with respect to staffing."

I think once again I would like a more firm dollar figure in terms of the pledge by the applicant for -- if we have to hire paid firefighter, God forbid. Almost done.

SUPERVISOR SCHILIRO: So on that a more definitive number related to the ladder truck and the paid firefighter.

MS. DIGIACINTO: Exactly, yes. Now we are on Chapter 6. Vegetation and Wild Life. Page 6-7, 6C1, Potential Impacts on Vegetation. Applicant plans to move trees

Comment 6-5

along the roadway, approximately 451 new

**Comment 6-5
(cont'd)**

trees would be planted on site. I'd like to know how many new deciduous and new trees would planted along King Street and also what would be the minimum height of those trees.

Comment 18-1

And finally, I would like a matrix or summary of all impacts associated with the approved but unbuilt project, and I am referring to the 238,000 square foot office space, the 20,000 meeting house, and the five-story parking garage. Thank you.

SUPERVISOR SCHILIRO: And just say that last one again? I understand what the topic was, the approved of unbuilt space?

MS. DIGIACINTO: Yes.

SUPERVISOR SCHILIRO: And what did you want?

MS. DIGIACINTO: I want a matrix of summaries, so all the impacts associated.

SUPERVISOR SCHILIRO: With the -- if they built that.

MS. DIGIACINTO: Right.

SUPERVISOR SCHILIRO: Sort of a baseline in comparison to what's being proposed you mean?

1 MS. DIGIACINTO: In addition to, I
2 would to -- because this -- we are not even
3 looking at this when we look at the
4 application.

5 SUPERVISOR SCHILIRO: But they can do
6 this now.

7 MS. DIGIACINTO: Yes, absolutely they
8 can do this now.

9 SUPERVISOR SCHILIRO: Right --

10 MS. DIGIACINTO: This is part of --

11 SUPERVISOR SCHILIRO: So what the
12 impacts of that are.

13 MS. DIGIACINTO: And then you look at
14 the impacts of this --

15 SUPERVISOR SCHILIRO: -- and then
16 measure that against the impacts --

17 MS. DIGIACINTO: -- of what's being
18 proposed.

19 SUPERVISOR SCHILIRO: -- of what's
20 being proposed versus zero of what's being
21 proposed.

22 MS. DIGIACINTO: Exactly.

23 SUPERVISOR SCHILIRO: Got it. That's
24 it?

25 MS. DIGIACINTO: Yes.

Comment 12-2

MR. BERRA: Before you pass can I ask a question about something? You were saying that with the addition of 500 new residence it would require hiring one more -- clearly the hiring of more than one police officer?

MS. DIGIACINTO: Do I think that would be the case?

MR. BERRA: Yes.

MS. DIGIACINTO: I would assume it would be.

Comment 12-2

MR. BERRA: Okay. I did a quick calculation and you know, I don't necessarily -- obviously we'd have to see sort of what we were talking about before with Jen Lamia's letter. You can't always do sort of calculations, but if we are adding 500 people that's roughly 4 percent to the population we have now, so 1/24 of the police department is a little bit more than one, but then again there is are some facts -- some functions like dispatcher that would have to be added.

MS. DIGIACINTO: Well, I think that's reasonable. Like I said, I think this was a little bit light in terms of the police

1 department, that part of the session. And
2 by the way, the -- what it is called -- the
3 community that you might want to look at is
4 called -- it's in San Diego, it's called The
5 Glen at Scripps Ranch, S-C-R-I-P-P-S, and
6 they build it as a new continuing life
7 community and it is just -- I think it is
8 just fascinating. And again, I pass for
9 your parcel I would love you to consider it.

10 SUPERVISOR SCHILIRO: I am going to
11 pass it to you guys but to stay on that note
12 I think, because I've heard of these before,
13 and I could be wrong, somebody here may
14 know, I thought that the Osborn in Rye was a
15 similar set up where you actually buy the
16 unit and then you can transition through the
17 stages that you did, and if it is not the
18 Osborne I thought there was one in Rye or
19 somewhere there. Tony, do you know?

20 MS. DIGIACINTO: Right. But what I
21 like about this is that you have the
22 residential component, it's just like your
23 neighborhood and my neighborhood that you
24 just --

25 SUPERVISOR SCHILIRO: It's not a

1 building, it's just --

2 MS. DIGIACINTO: It's like -- you are
3 buying this and then even --

4 SUPERVISOR SCHILIRO: It is like an
5 individual unit.

6 MS. DIGIACINTO: -- it's an
7 individual house. It's an individual
8 house --

9 SUPERVISOR SCHILIRO: That's not the
10 Osborne then.

11 MS. DIGIACINTO: No. And then even
12 mentioned that some people because they're
13 you know, they sold their big house and they
14 have different floor plans and they buy the
15 three-bedroom house and after three-years
16 they sold that because they realized that it
17 was much larger than what they need.

18 MR. VENEZIANO: So I would bet that
19 there is not many of those in the country.
20 So this continued care came out in the early
21 '80s. It was from 55 and it was the whole
22 onset of the assisted living business and
23 what happens is that back then they thought
24 people were gonna buy into these communities
25 at a much lower age. The average age for an

1 assisted living building is like 78 to 82.
2 You have to drag them in, then we all might
3 have people in there, and that really
4 whacked that 15 years of income. And so
5 this -- I don't know how this would apply
6 here because this has been -- the basis has
7 been set as an office site so I don't know
8 where that is, if it is right in San Diego
9 or if it's on the foothills, if it cost a
10 million dollars or 40 for the land. But
11 that's a very idealistic way of living. I
12 get why you like it, you know, at a certain
13 age you go in and you gonna be in one place
14 until you go. And you would think that it's
15 55, but it's not 55.

16 People want to go there when they are
17 much older. I represent Ericson right now
18 we've looking -- we have a 1,500 unit
19 project, we have been looking for a site in
20 Westchester and they have that situation,
21 and the nursing homes tend to be much
22 smaller then -- and they really are -- I
23 don't even think -- the Osborne I don't
24 think has a nursing home by the way, I don't
25 think they do, but they do have the

1 townhouses that are a million, a million and
2 a half dollar thing that you can buy and
3 then you can move into the buildings. So we
4 will research though, we took it down and we
5 will see what comes of it and we'll see.

6 MS. DIGIACINTO: Thank you.

7 MR. BERRA: Maybe that would include
8 what some other facilities that are
9 somewhere around that are similar to that.

10 SUPERVISOR SCHILIRO: Thanks Barbara.
11 I will just keep going down the line.

12 MR. REITER: Sure. So I'm gonna add
13 to the Jen Lamia letter because Jose and
14 Barbara covered everything that I had in my
15 notes. I guess that is better about going
16 third.

17 MS. DIGIACINTO: I am sorry.

18 MR. REITER: In fact, everything that
19 you guys had discussed was in my list. One

20 of the things that I did have the

21 opportunity to do was to speak with the

22 **Comment 12-2** chief of police as one of the liaisons in.

23 He definitely had some concerns about the

24 numbers and the calculations and I think the

25 best thing to do is maybe we invite him and

1 **Comment 12-2**
2 **(cont'd)**

3 have him comment on what he thinks would be
4 applicable to this particular project. The
5 same thing with the fire department, I've
6 spoken to them, they have some concerns, the
7 ladder, you know, volunteers are absolutely
8 impossible to get now, in fact, we are
9 losing some. We are paying an EMT for prime
10 shift during the day time and I think there
11 is even a meeting coming up with the
12 Westchester Emergency Services with the
13 paramedics which we are gonna get an update
14 on, you know, the coverage and consortium of
15 municipalities that participate, and that
16 may be something that you know, I can find
17 out and see how that would affect and if it
18 would at all.

19 But most everything that I had in my
20 list has already been covered, I don't think
21 it is worth going over. I will just wait to
22 hear back from you guys at the next hearing
23 and I will get all the comments that I have.

24 SUPERVISOR SCHILIRO: Just to stay on
25 that Adam, you can help on this because I
don't know the right process is let's say
have the chief in this case come in. Isn't

1 it part of the study being done that we are
2 soliciting the input from in this case the
3 fire department and the police department to
4 see what impacts they believe are gonna --

5 MR. KAUFMAN: Sure, that's comment
6 that you have and the applicant will respond
7 to that.

8 SUPERVISOR SCHILIRO: So that's all.
9 Basically is to make sure that the impacts
10 from fire and the police are clearly covered
11 in the DEIS, is that it?

12 MR. KAUFMAN: No, they are going to
13 be responded in the FEIS, these questions
14 that you have.

15 SUPERVISOR SCHILIRO: What I am
16 saying is that, but that's where we are
17 gonna get the feedback from, so it is on
18 record that there is -- what Barry is saying
19 making sure that there is enough feedback
20 from the first responders that are included
21 in the study.

22 MR. KAUFMAN: Sure, you should be
23 specific what you want the applicant to
24 answer and if that is soliciting impact from
25 these other entities that is fine.

1 SUPERVISOR SCHILIRO: Is that what
2 you were say?

3 MR. REITER: Yes, exactly.

4 MR. KAUFMAN: Okay.

5 SUPERVISOR SCHILIRO: That's it?

6 MR. REITER: Yes, that's it.

7 SUPERVISOR SCHILIRO: Saleem.

8 MR. HUSSAIN: I think I just have
9 three comments. So one is actually kind of
10 expanding on this one point that I made, I
11 guess it was two meetings ago, when I made a
12 comment. It was on the -- we look at the
13 demand that exist based on current market
14 conditions. So just looking across
15 townhomes, multi-family homes and hotels.

16 I think that analysis that is shown
17 we just need a whole new view of that
18 **Comment 13-2** because I do think things have really
19 evolved since that was shown and for me to
20 be able to evaluate how this would fair
21 against demand really requires us to look at
22 what is going on now. Do you want me to
23 speak more loudly?

24 MR. WOODYARD: I missed everything
25 you said Saleem.

MR. HUSSAIN: You missed everything I said?

MR. WOODYARD: Yeah.

SUPERVISOR SCHILIRO: Say it again.

MR. HUSSAIN: Okay. Yes, so what I --

SUPERVISOR SCHILIRO: And the masks aren't helping.

MR. HUSSAIN: I'm sorry, I'll try not to be as verbose. So the point I was making was that in the market assessment that's done is doing a demand estimation on what we are expecting for townhomes, for multi-family homes and for hotels, and that is an outdated analysis from everything that I can see, and I expect it to be very different now and I would like to be looking at current information in order to then assess what's relevant for the town today.

Comment 13-2

So that has an affect mostly on I think it is Section 13B, like basically a relook at that whole section and I think that would help you as well to make sure that this is a process that makes sense to do.

And actually it is a really good point Barbara brought up about that same route issue also having an effect on student forecast of like how many students we expect. It is something Jen Lamia also referred to how it is affecting her estimation of how many students she can expect to have because of pandemic related trends. So we are seeing that effect in all places so it does not make sense to me to be looking at a document that is not cognizant of that change.

Comment 12-7

So that's a really important thing that needs to be addressed, it's not like a sentence correction, it's like a relook at the demand estimation.

Comment 13-2

And then the second point I have is like the impact of that on the way we look at the alternatives. So that was in Section 18. You have a set of alternatives that we can see, and in the alternative those options for alternatives the main thing I was looking for and you have a very extended table that describes for each of the alternatives what are the things to

Comment 18-2

Comment 18-2
(cont'd)

consider.

Like I think one thing as a resident of the town we should care about is for each alternative, how does that actually meet or not meet the needs of the market, and there is one row I could find where you could have addressed that which is called the Fiscal and Economic Impact or something like that, and for entire alternatives you actually just have that not represent any change.

Like for example the one that Barbara was talking about was the senior living option. For that one you say that it's the same as the current option, so that doesn't make sense to me. So I would actually ask for you to expand on Further Alternatives, how it meets or doesn't meet the demand better or worse than what you are proposing.

I think that would be a really important thing, I think that should go at the very top consideration for how we look at the alternatives. So that was the second comment.

And then the third and final one is actually one that I just realized as we are

1 going through this, which was around the
2 tree protection. So I think that's C151 is
3 the Tree Protection Plan. So if we look at
4 the map there you are actually showing which
5 trees are going to be put down and which
6 trees are going to continue to exist and be
7 protected. So there is a few trees and I
8 need to understand this more closely, but
9 there is -- the ones that were taken down is
10 quite a few, it looks like it is over a
11 hundred.

12 For the ones that have been there
13 longer I think it would be good to
14 understand what it would take and what
15 implications it would have for you to
16 protect those trees. Because there are some
17 really -- we sometimes just pass over that
18 and just looking at the diagrams that you
19 had shown it seems like there is some
20 significant changes in the landscaping that
21 has an effect on that set up and I just
22 would love to go deeper into that.

Comment 6-4

23 And I also ask the community to
24 respond on that in your comments because I
25 just need to better understand what the view

1 is from our residents around this topic too.
2 So those are my three comments.

3 MR. BERRA: Saleem, if I could just
4 point out something that you may not be
5 aware of it. The Conservation Board which I
6 just referred to it, had a work session that
7 we could talk about on the 31st and they
8 will be providing comments and they will be
9 focusing on a lot of these different things.

10 MR. HUSSAIN: Great.

11 MR. BERRA: I am really looking
12 forward to them, it is a lot of work for
13 them, but they are certainly up to it.

14 MR. HUSSAIN: Great. Thank you.

15 SUPERVISOR SCHILIRO: All right. I
16 will provide -- excuse me, some of my input
17 if I can say it. Most of it was covered,
18 but I will do some highlights and I wanted
19 to ask Adam, there is three items here that
20 I just wanted to get your input, maybe four
21 items. The impacts on neighboring property,
22 I'm con -- the question is the adequacy of
23 what's been studied so far. So the impacts
24 on neighboring property and what they can do
25 if these were enacted.

1 The section which Barbara brought up,
2 the Unavoidable Adverse Impact, which is
3 fairly brief. The impacts on first
4 responders which Barry touched on as well
5 and then the additional town expenses if it
6 became more residential this and then other
7 properties.

8 So those were items those curious of
9 you had an opinion on the adequacy of what
10 was studied so far on the DEIS.

11 MR. KAUFMAN: Well, you already
12 determined that the document was adequate
13 and it met the minimum requirements of he
14 scope.

15 SUPERVISOR SCHILIRO: Right, minimum.
16 Right.

17 MR. KAUFMAN: So with those minimum
18 requirements on mind you are now analyzing
19 this document and you have these follow up
20 questions, and those follow up questions
21 will be addressed in the FEIS document. So
22 now is the time to make any comments that
23 you have or if you have any questions on
24 that DEIS.

25 SUPERVISOR SCHILIRO: Okay.

1 MR. KAUFMAN: That answered your
2 question?

3 SUPERVISOR SCHILIRO: Sort of. I was
4 looking -- I was trying to solicit your take
5 on it. I know basically it has met the
6 minimum standard.

7 MR. KAUFMAN: Right.

8 SUPERVISOR SCHILIRO: Right, so
9 that --

10 MR. KAUFMAN: But I also have a
11 document that addresses my substantive
12 comments on that document.

13 SUPERVISOR SCHILIRO: Right. Okay.
14 Let's see what else I marked here that
15 wasn't covered. Well, I am just going to
16 reiterate, one of my comments was the --
17 Barbara sort of listed them, but the study
18 of students in our clustered developments,
19 and I am not sure how -- you mentioned some
20 of these and I'm gonna use Leisure Farms as
21 an example. I don't know that I would
22 categorize that the same as like
23 Whippoorwill Hills, which is a more
24 condensed as far as the clustered
25 development.

Comment 12-7

1 But regardless, that piece is
2 important about making sure we understand
3 the impacts of the student population from
4 those developments because I wasn't on the
5 Board then, but we know people always bring
6 up the examples of Whippoorwill Hills and
7 what was projected and what resulted in the
8 student population. So just that topic is
9 important, I just want to reiterate that.
10 That would be Analysis of the Neighboring
11 Properties is the same thing.

12 I do think I agree with everybody
13 that Jim brought up some very important
14 points, and Saleem touched on it as well
15 about the more recent economy and the
16 example I use in my world is, is as though
17 we've had a 10 year economy in 18 months,
18 you know. All the fluctuations that we have
19 and for the people that are here specially
20 the applicants and the real estate
21 developers and investors, things will be
22 different three weeks later based on -- and
23 as a banker we are looking at it as the same
24 way. Things are changing so rapidly and Jen
25 alluded to that and I think that was part of

1 your comment as well. So it is very
2 important because it impacts a lot of
3 different things.

4 I asked about the unavoidable adverse
5 **Comment 19-1** impacts, fire and police are critical,
6 additional town expenses. Oh, one other
7 point and I didn't -- if I missed this
8 that's okay, but there is a lot of
9 alternatives in here. I don't -- unless I
10 missed it, I didn't see anything, I saw
11 senior housing but not age restricted. So I
12 don't think that was studied, right.

13 MR. KAUFMAN: We don't usually use
14 those terms.

15 SUPERVISOR SCHILIRO: But they are a
16 little bit different, you know, the way they
17 describe senior housing in here is a little
18 different than what I would consider like
19 the 16 unit on 128 or what was just approved
20 on the IBM -- old IBM property which is
21 truly age restricted, but more 55 and over.

22 And to Tony's point, people that
23 might be moving into some of the communities
24 that Barbara has mentioned aren't
25 necessarily the empty nester of 55 and over

Comment 18-3

that want to stay in the community but want
to sell their house and want to downsize or
something. That would be helpful that were
-- that component were studied if it's
determined that that really is a separate
housing class and product, which I think it
is.

And with that I will turn it over to
the public for their comments. My opinion
would be we do keep it open --

MR. HUSSAIN: Yes.

SUPERVISOR SCHILIRO: I'm gonna go
through this one more time but I have some
other items, but I appreciate the Board
going through it in a comprehensive way
and -- so we can continue studying this, and
I thank Dr. Lamia for providing her input
which was very important.

So I think you said we had a list and
Mat was on it and Ed.

THE CLERK: Ed first and then Mat.

SUPERVISOR SCHILIRO: Okay, so Ed you
go.

MR. WOODYARD: Mat was ahead of me.

SUPERVISOR SCHILIRO: You guys fight

1 it out. Is it just the two of you?

2 MS. CLARK: I am gonna add myself to
3 the list.

4 SUPERVISOR SCHILIRO: Okay.

5 MS. CLARK: I don't want to surprise
6 anyone.

7 MR. WOODYARD: Good evening, Ed
8 Woodyard.

9 SUPERVISOR SCHILIRO: You are
10 familiar with the time, I don't think anyone
11 of you are gonna be extremely long, so if
12 it's okay we'll just go one in order.

13 MR. WOODYARD: Just give me the heads
14 up.

15 MR. BERRA: Unless you have to run
16 out to do stuff for the art show.

17 MR. WOODYARD: I'm getting up at 7:00
18 o'clock and I have to be at the highway
19 department at 7:00 o'clock in the morning
20 putting up the signs.

21 SUPERVISOR SCHILIRO: What about
22 frosting?

23 MR. WOODYARD: We'll get there.

24 SUPERVISOR SCHILIRO: Okays.

25 MR. WOODYARD: Anyway, I was just --

1 I've been looking at this and I have got --
2 I can guess we can go with the local law, I
3 think the whole thing is premature. I have
4 an idea that as you know, when we run -- I
5 was on the comprehensive plans steering
6 committee which served very nicely with
7 Barbara. Barbara has got some great ideas
8 here, thank you for doing your homework
9 Barbara.

10 The residential component on this is
11 very striking to me and I've got a real
12 problem with it. On the comprehensive plan
13 steering committee we talked about this
14 property for a long time and about
15 repurposing the buildings that were there.
16 We knew that this was -- the MBIA was going
17 out and we knew that was there -- and I see
18 this as maybe dividing the two things up in
19 different -- and treating them both
20 differently.

21 One is the repurposing of the
22 buildings that are there now because you are
23 dealing with the parking lot and you are
24 dealing with the wonderful and I'm glad that
25 they are keeping the wonderful old farm

1 house that is there, it's just charming, and
2 then most of the buildings that are there
3 repurposing them for a hotel and for
4 offices, and then really rethink the
5 residential part of it.

6 Barbara you came up with a very good
7 idea for a sports facility, I think that
8 would be good. Jen Lamia's letter it shook
9 me to the quick, because it is -- we've
10 already got over a hundred people -- over a
11 hundred students in here and that's a
12 hundred more cars and if anybody you know --
13 Tony, you live in this town, get up in the
14 morning, watch the traffic going to the
15 schools, it's absolutely unbelievable.

16 MS. DIGIACINTO: And in the
17 afternoon.

18 MR. WOODYARD: And after they picking
19 them up. The one down the high school
20 starts down at Smiths Tavern and it goes
21 through the light and it has to go through
22 two lights, it's crazy.

23 And then there is -- go over to
24 Crittenden, that's already backed up, you
25 know, it backs up here and trying to get on

1 to McDonald.

2 So the school thing is really tough,
3 more kids coming in I can see a whole
4 another you know, school bond being floated
5 and that's gonna drive people out of here.

6 The other thing and about the
7 residential component which you talked about
8 the high density that Jose was talking
9 about, you know, and multi-family is
10 basically a euphemism for an apartment
11 building or condominiums.

12 Barbara had made a suggestion for
13 the -- for Eagle Ridge, for the house in
14 there, and this is in light of Covid, which
15 we're resilient because we are all sitting
16 here wearing masks, about having
17 single-family -- a small single-family, half
18 acre units up there on Eagle Ridge, because
19 people wanted to be separated out, feels
20 safe and secure in a community, but then
21 also have the ability not to have to worry
22 about somebody coming and then coughing on
23 them.

24 So I taught that, that concept that
25 you had Barbara about up there, I really

1 liked that a lot, it's something that came
2 to Glendale and the Wampus Avenue. I mean
3 that -- and it's something that you were
4 talking about earlier when you were talking
5 about with the San Diego thing. I think
6 that's a terrific idea and they can do it.

7 The other thing too is also affects
8 the taxation, you know, the multi-family
9 versus the single home, we can look at the
10 taxation on that. The other thing is I --
11 you are talking about the school district
12 here and how special it is, and that's a
13 driving point here, you know.

14 We are in a special town and people
15 -- it is not just the school district, it is
16 the town, and we are a great town. I mean,
17 we are a terrific town. Anyway, making --
18 having more people and more buildings and
19 more problems does not make the town
20 greater. So -- and I'm just throwing all
21 that out there, but I think if you can
22 divide the project up, because you did that
23 up at Brynwood, you separated it out and you
24 dealt with it the same -- you dealt with it
25 individually.

1 So you can talk about the
2 repurposing, which I guess I am repeating
3 myself here, but you talk about the
4 repurposing like we do that at the
5 comprehensive steering committee, and then
6 look at what they want to do because I
7 understand the commercial space is, you
8 know, everybody is Zooming right now and
9 that's what is happening.

10 But the other thing that you -- the
11 other thing that you talked about the police
12 and the additional police. They are crowded
13 enough as it is back in that office and we
14 are looking at getting a new police building
15 at some point.

16 And then Saleem, I can't -- I got to
17 congratulate you on the trees. I was up
18 there yesterday and I was just walking
19 around, driving around, it's a gorgeous
20 piece of property, it's spectacular and
21 there are some trees on there that would
22 just embrace the right architecture. And
23 the other thing that would be really
24 terrific up there is to use that farm house
25 as the template for whatever is going to be

1 put up there residentially. Don't put up
2 some -- I was gonna start swearing, but
3 don't put up some steel and glass
4 monstrosity up there that is gonna sit there
5 and offend everybody. If you drive down
6 these roads, these are wonderful rural roads
7 with the stone build -- with the stone walls
8 on there. The stone walls that are in
9 there, Jesus, they are wonderful, and you
10 might not even think about what did -- or
11 suggest what you can do with that road what
12 you did up on the east side of town up the
13 Mianus River gorge, you know, to protect
14 that. You might think about that on those
15 walls when you go down on that avenue.
16 Anyway, I'm done talking.

17 SUPERVISOR SCHILIRO: Hold on, I've
18 got a question for you, well, a comment and
19 a question. Just so people know at home, we
20 are not -- we love our police department,
21 but we are not looking at building a new
22 police station.

23 MR. WOODYARD: Right, right.

24 SUPERVISOR SCHILIRO: So I don't want
25 people to think we're --

1 MR. WOODYARD: No, I know that, but
2 they need more room.

3 SUPERVISOR SCHILIRO: And the second
4 thing was the very second to last thing you
5 talked about with, talking about how things
6 were split up in other projects, was there a
7 specific actionable step or something you
8 wanted them to look at with respect to that?
9 I am not quite understanding exactly what
10 you are talking about.

11 MR. WOODYARD: Okay, look at this
12 project in phases. Go ahead and what we
13 talked about in the comprehensive plan
14 steering committee. Re-purpose those
15 buildings, one as the office building, the
16 **Comment 2-2** other one as the hotel, that's fine, you
17 know, and just -- and then make that as a
18 start. And then really start thinking about
19 the other opportunities that may be
20 available to them besides a freaking
21 apartment building.

22 MS. DIGIACINTO: And correct -- I
23 just can't remember, but I think the
24 comprehensive plan recommended limited
25 residential use.

1 MR. WOODYARD: I believe so.

2 MS. DIGIACINTO: Is that right, Adam?

3 MR. KAUFMAN: I'd have to look for
4 that specific point.

5 MS. DIGIACINTO: I'd have to check,
6 I'm not sure.

7 MR. WOODYARD: I believe so, because
8 as I remember during those discussions --
9 you got one handy Mike?

10 SUPERVISOR SCHILIRO: Always. This
11 is my Bible.

12 MR. WOODYARD: Anyway, it is
13 something, it was -- we were very, very
14 careful about what was gonna be happening
15 there, especially with the mention of the
16 hotel because we knew what was gonna be
17 proposed up at Eagle Ridge, of course we
18 didn't know what was gonna happen to La
19 Quinta either. But any way. Anything else?

20 SUPERVISOR SCHILIRO: That was it. I
21 just wanted to get these two clarifications.

22 MR. WOODYARD: What?

23 MR. BERRA: I have one question for
24 you. So when you were saying instead of
25 what they're proposing, repurposing --

1 breaking up into two pieces essentially, so
2 you are suggesting that one of the
3 possibilities that they might want to do
4 houses on a half an acre or something like
5 that?

6 MR. WOODYARD: Yes, yeah. Like what
7 Barbara had proposed originally for and I --

8 MS. DIGIACINTO: I might get one for
9 me.

10 MR. WOODYARD: I liked it.

11 MR. BERRA: Yeah, I thought -- I
12 guess when I looked at this, even assuming
13 that you were using the entire property that
14 way, I've some questions as to whether that
15 would be practical, but I do like the idea
16 of smaller houses on smaller lot.

17 MR. WOODYARD: And you can have an
18 entrance off of Cooney Hill, you know,
19 you've already got the --

20 MR. REITER: You have the --

21 MR. WOODYARD: -- you've got that
22 gate that sits right there.

23 SUPERVISOR SCHILIRO: You've got 38
24 acres here, this would mean doing something
25 like probably 45 houses or so.

Comment 2-2

MR. WOODYARD: Yeah, and you make them high end and I think that -- and I think you can probably make them more profitable at the end because people -- that's what people are coming for. What you are doing is you are creating a neighborhood in the 45 houses and you got people who will sit there and walk their dogs and you know, carpool. So I mean --

MR. BERRA: That would very spread out and it is always worth considering these things, but it would be very spread out and what we're trying to do is cluster and trying to preserve the land.

MR. WOODYARD: No, but I think what you are finding with the cluster is it is -- that it is making -- it's urban and so -- anyway. I still like that, I mean it is so bucolic up there, it's absolutely gorgeous land and I just -- embrace the land, don't ruin it. Thank you.

Comment 13-5

SUPERVISOR SCHILIRO: Thanks Ed.

MS. DIGIACINTO: Thank you.

SUPERVISOR SCHILIRO: Mat.

MR. MILIM: So I think it is great

Comment 13-5
(cont'd)

that the Board is asking these kinds of questions around the increment of taxation versus the cost to serve, I think that's really important. I've been concerned for a while about the kind of taxation projects that had been approved and just the potential for them to drag on the budget.

So I think you know, these kinds of questions are great and important and I think from my perspective just as a resident I think the project really needs to be additive and accretive both to the town budget, the school budget and quality of life.

So in that last regard on quality of life, Barbara, I thought it was grate that you've made these comments and come around to adding some of those rec facilities. I thought those ideas that were mentioned were great, I just really hope that we can follow through with that and this is what a number of us in town been pushing for a long time and I think it would be additive. So that's all I have to say.

SUPERVISOR SCHILIRO: I know you like

1 the hockey idea.

2 MR. MILIM: I love the hockey idea, I
 Comment 13-5
 3 (cont'd) love the idea of a turf field too.

4 MR. WOODYARD: Actually it was John
 5 Davidson wanted to have a hockey --

6 SUPERVISOR SCHILIRO: Well, it's
 7 coming up. We did have a former very known
 8 retired hockey player we looked at starting
 9 a hockey rink, but we looked at --

10 MR. WOODYARD: And then that's where
 11 the Bristal is now.

12 SUPERVISOR SCHILIRO: Is on? That
 13 mic is on, right?

14 MR. WOODYARD: Anyway, John Davidson
 15 was getting together a whole bunch of people
 16 to do it and then they were gonna put it
 17 right where the Bristal was, but that
 18 changed. That was one of Becky's things, so
 19 anyway. Thanks.

20 SUPERVISOR SCHILIRO: Thanks. And
 21 Jen, did you want to say something Tony?

22 MR. VENEZIANO: My head is just
 23 spinning. The one thing I just wanted to
 24 say because there is a lot of
 25 reconceptualization of the site. So there

1 is nobody there right now and --

2 SUPERVISOR SCHILIRO: Right.

3 MR. VENEZIANO: -- and I don't know
4 what the taxes are, but we've got to move
5 this forward. And I am not responding to
6 all of these ideas we'll be put in the FEIS,
7 but we need to come to some commonality here
8 as to what can work. I mean, you are piece
9 by piece ripping at this site I mean, and if
10 you just look at from sitting here, I want
11 to give you all credit for taking a look at
12 the EIS, you did a great job.

13 But, if you just add it all together
14 we are just gonna to be pinned down to the
15 ground and we are going to be talking about
16 what not gonna do with taxes. So we'll come
17 back with some answers and we will have a
18 meeting I guess the 26th is when this gonna
19 be adjourned to.

20 SUPERVISOR SCHILIRO: The 22nd I
21 guess it would be.

22 MR. VENEZIANO: The 22nd, okay, and
23 we will hear the rest of the comments. But
24 I just had to say it because I guess it is a
25 lot to digest and I haven't talked to the

1 client, but it is a lot to digest if you
2 look at the totality of it. And there is a
3 lot of the original thinking looking at
4 this, do a whole new market analysis, and I
5 don't disagree with a lot of it, it is just
6 a lot of work, a lot of time, and by the
7 time we are done with it to get back to your
8 point, we will have another nine month of
9 six cycles going through it and you will
10 need new stuff. So we've gotta figure out
11 the balance here to get something going. I
12 just had to say that.

13 MR. BERRA: Is there another way to
14 put that, that is great to look at all this
15 in a lot of details but you do get the point
16 where you're narrowing down to something
17 manageable as opposed to expanding on it.

18 MR. VENEZIANO: Yeah. I mean, I've
19 got -- I am not gonna sleep tonight right,
20 I've got seven different ways to think this
21 through including bifurcating the site and
22 then I'm thinking about the plans we have
23 and what I can do with it because I want to
24 be responsive. But we've got to get to some
25 root goodness here that can sell or lease

1 and sort of move it. And I know you are all
2 fair, but there was a lot of comments coming
3 out because we've already have you know --
4 water is an issue, we have some issues.
5 There is some traffic issues, the whole
6 school thing in there was -- Mike did the
7 Whippoorwill Hills thing and said two kids
8 were gonna come and a hundred came. So we
9 will look at that too, but I just had to say
10 that. Thanks.

11 SUPERVISOR SCHILIRO: Thanks Tony.
12 Jen, do you want to come?

13 MS. CLARK: I just want to state some
14 major inconsistencies I've noticed since
15 coming to the Board for the last three
16 months and the way the Eagle Ridge project
17 was handled versus what just went down here.
18 Everyone can watch it on video I spent 10
19 minutes standing here the last time we had
20 this Board meeting telling you that I was
21 concerned about our school district and that
22 there were too many kids coming into the
23 school district and the developments had to
24 stop getting approved.

25 You guys all looked at Roland because

1 none of you were able to answer me about how
2 long someone can stay in the hotel in Eagle
3 Ridge and partially send their kids to
4 school here. You all looked at me and told
5 me it didn't matter if people over the age
6 of 55 lived there because they wouldn't have
7 that many school age children and it
8 wouldn't impact the school district that
9 much.

10 Then I read Jen Lamia's letter and
11 it's like, oh, wow, this actually is a
12 problem, nobody should have been looking at
13 me like I was crazy last week. So all of a
14 sudden, I would like to understand I guess
15 better why -- yes, I understand there was a
16 55 plus community and you think that these
17 people might not have school age children.

18 Still I haven't gotten an answer
19 about whether or not someone could stay at
20 the hotel for a year and try to flop it over
21 and send their kids.

22 MS. DIGIACINTO: They can't. I think
23 that's 30 days.

24 SUPERVISOR SCHILIRO: I think that
25 was addressed --

1 MS. DIGIACINTO: Yes, that was
2 addressed --

3 THE SPEAKER: Not clearly, no. You
4 guys got it scooted off to a taxation. No
5 you said someone could stay a little longer
6 than 30 days, they were just collecting more
7 taxes.

8 MS. DIGIACINTO: No. No.

9 SUPERVISOR SCHILIRO: You can't have
10 that as your residence and then attend the
11 school, it's just -- that doesn't --

12 THE SPEAKER: Fine. So I'll focus on
13 the 55 plus. You are talking about
14 projected versus the results. You projected
15 two kids at Whippoorwill Hills and went over
16 the rules or whatever it was, I don't know,
17 you are the one that said that that study
18 was -- it ended up in more resulted kids.
19 So I don't know what made you think that the
20 projected number of Eagle Ridge, I don't
21 know if Jen Lamia provided the same exact --

Comment 12-7

22 SUPERVISOR SCHILIRO: She had no
23 issue. The schools had no issue with Eagle
24 Ridge and Brynwood specifically and the 16
25 unit by David Chen. So just so you know,

1 our school district is Valhalla and Byram
2 Hills are always intimately involved in all
3 of our developments and I've always been
4 liaison, specially with the supervisor,
5 Barbara has been one of the other liaisons
6 and we cover development every monthly
7 meeting. This one specifically because they
8 do have concerns. So it was covered in the
9 other projects, this particular one they
10 have concerns. So that's the difference.

11 MS. CLARK: I am sorry, you could say
12 that if you want but if someone can go back
13 and look at the video. But the way I was
14 treated last week when I brought up my
15 concern about the school district bursting
16 at the seams, is very inconsistent with the
17 way you are acting tonight. It's just my
18 personal --

19 SUPERVISOR SCHILIRO: And I
20 respectfully disagree with you --

21 MS. CLARK: That's fine and I can
22 respectfully disagree also.

23 SUPERVISOR SCHILIRO: No, no. But
24 this is the DEIS process as the
25 environmental piece and when we were doing

1 the Eagle Ridge we were at the end of that
2 process.

3 MS. CLARK: That's fine. I stood
4 here and I made it very clear that I love
5 having one high school, I love the town, I
6 love the trees, and I love all the stuff and
7 the project got approved, no big deal. And
8 now all of a sudden everyone cares about the
9 trees, and the barn, and the stone walls and
10 the school district and all this stuff, and
11 I just think it is a little suspicious to me
12 to be honest with you.

13 SUPERVISOR SCHILIRO: Again Jen, I
14 would have to disagree with you --

15 MS. CLARK: You're allowed to
16 disagree but I don't have to agree.

17 SUPERVISOR SCHILIRO: No, no. But
18 the EIS process at Eagle Ridge was very
19 thorough and you have to go back years to
20 follow that process.

21 MS. CLARK: I'm not saying it wasn't
22 thorough, I just think that the way that the
23 developments --

24 MR. VENEZIANO: Can we close our
25 hearing? This beyond our thing, this is not

1 even relevant to our project this whole
2 document -- this whole --

3 SUPERVISOR SCHILIRO: Let Jen finish
4 her comments about this, about the DEIS but
5 we have to move forward.

6 MS. CLARK: You can close.

7 SUPERVISOR SCHILIRO: We could
8 adjourn it.

9 MR. VENEZIANO: You can speak, I just
10 don't need --

11 MS. CLARK: I know I can speak --

12 SUPERVISOR SCHILIRO: We can adjourn
13 the hearing.

14 MS. CLARK: I don't anyone's
15 permission. That's fine.

16 SUPERVISOR SCHILIRO: Ed, did you
17 want to make more comments?

18 MR. WOODYARD: Yeah. I just want
19 to -- I just want to -- Tony is getting
20 anxious about getting things started in nine
21 months. If you divide this thing up into
22 two things like you did at Brynwood,
23 separate it out, they can start going ahead
24 with the repurposing of the buildings that
25 are there and then it will give time for

1 everything else to be considered. That's my
2 thought. Thank you.

3 SUPERVISOR SCHILIRO: Thanks. Is
4 there any other comments from the public or
5 the Board. We are not closing the hearing
6 Jen, if you have more to say or you can come
7 back at the next meeting.

8 MS. CLARK: No, I think it is very
9 clear about who does or does not deserve
10 respect in this room. I am fine. Thank
11 you.

12 SUPERVISOR SCHILIRO: Okay. So if
13 there is no other comments we've -- let me
14 get my agenda. So we received Jen's letter
15 and then we will need a motion to adjourn to
16 the next meeting for items one and two.

17 MR. BERRA: I make that motion.

18 MS. DIGIACINTO: Seconded.

19 SUPERVISOR SCHILIRO: All in favor.

20 MS. DIGIACINTO: Aye.

21 MR. BERRA: Aye.

22 MR. HUSSAIN: Aye.

23 MR. REITER: Aye.

24 SUPERVISOR SCHILIRO: Great. Thank
25 you all. Thanks for the comments. Thank

1 you applicant.

2 MR. VENEZIANO: Thank you very much.

3 (Time noted 9:41 p.m.)

C E R T I F I C A T I O N

I, Eunice Patchen, Certified Court Reporter,
before whom this proceeding was taken, do hereby state
on the Record:

This to be a true and accurate transcript of
the aforesaid proceeding and that due to the
interaction in the spontaneous discourse of the
proceedings, dashes (--) have been used to indicate
pauses, changes in thought, and/or talk-overs; that
same is the proper method for a Court Reporter's
transcription of proceedings, and that the dashes (--)
do not indicate that words or phrases have been left
out of this transcript;

That any words and/or names which could not
be verified through reference material have been
denoted with the parenthetical "(ph)."

Eunice Patchen

A P P E A R A N C E S:

CHAIRMAN	MICHAEL SCHILIRO
COUNCILMAN	BARBARA DiGIACINTO
COUNCILMAN	JOSÉ BERRA
COUNCILMAN	SALEEM HUSSAIN
COUNCILMAN	BARRY REITER

ROLAND BARONI, ESQ. TOWN ATTORNEY

KEVIN HAY, TOWN ADMINISTRATOR

ADAM KAUFMAN, DIRECTOR OF PLANNING

ALISON SIMON, TOWN CLERK

1 CHAIRMAN SCHILIRO: So the first item
2 is reconvening the hearing regarding Airport
3 Campus, 113 King Street. There is two items
4 here. The first is opportunity to provide
5 comment on the Draft Environmental Impact
6 Statement or DEIS prepared in connection
7 with the proposed Airport Campus
8 Development, 113 King Street, which for
9 those who may be more familiar with the old
10 MBIA Campus near the airport.

11 The second item is to consider a
12 local law amendment to the code of the town
13 of North Castle, Chapter 355 entitled
14 Zoning, with respect to the designated
15 design office building 20A zoning district,
16 and the proposed Airport Campus Development.

17 We are not dealing with the zoning,
18 but that's what obviously is gonna be
19 adjourned to the future. What we will be
20 working on for the last several meetings is
21 the DEIS, and before counselor I have you
22 speak I am just gonna have Roland say a few
23 words regarding process. Again, we can't
24 assume everybody is watching these meetings
25 every week we are here, so I just want to

1 make sure they understand the process here
2 and what is going on with the DEIS. So I
3 will turn it over to Roland and then we will
4 go there.

5 THE CLERK: Do you want to open the
6 meeting first?

7 CHAIRMAN SCHILIRO: Thank you Alison.
8 I need a motion to reconvene the hearings.

9 MS. DIGIACINTO: I make that motion.

10 MR. HUSSAIN: I seconded.

11 CHAIRMAN SCHILIRO: All in favor.

12 MS. DIGIACINTO: Aye.

13 MR. HUSSAIN: Aye.

14 MR. REITER: Aye.

15 MR. BERRA: Aye.

16 CHAIRMAN SCHILIRO: And before Roland
17 goes, any correspondence? That I remember.

18 THE CLERK: No.

19 CHAIRMAN SCHILIRO: Okay, Roland.

20 MR. BARONI: Where you are in the
21 process is you opened the hearing on the
22 rezoning application and you have opened the
23 public hearing on the DEIS, the Draft
24 Environmental Impact Statement, and you've
25 had several sessions. And tonight you are

1 having another one and you might choose at
2 the conclusion to close the public hearing
3 on the Draft Environmental Impact Statement
4 and adjourn I would recommend, that you
5 adjourn the public hearing on the rezoning
6 application.

7 CHAIRMAN SCHILIRO: Right.

8 MR. BARONI: Set a comment period,
9 anywhere from 14 to 20 days is generally
10 appropriate, and at the conclusion of that
11 written comment period the applicant will
12 then be able with the stenographic record
13 that's being made and written comments to be
14 submitted, the applicant will then be able
15 to prepare its final Environmental Impact
16 Statement, which basically is a document
17 that answers all the questions that have
18 been asked during the DEIS public hearing,
19 the one you're having, and that will be the
20 next step.

21 Once you've accepted the FEIS as
22 complete, and that is circulated you will
23 then be in a position to consider a finding
24 statement which will conclude the
25 enviromental review and then you will be

1 able to consider the applicant's request.
2 So that's the process from here forward.

3 CHAIRMAN SCHILIRO: Thank you. So in
4 summary this -- that really wasn't a summary
5 but this is our opportunity, the Board, the
6 public, which we've had several meetings on
7 to provide input on their review of the
8 DEIS, request if there is anything
9 substantive that needs to be addressed or
10 studied, and then they come back and provide
11 that FEIS document.

12 And as Roland said, the rezoning
13 hearing is for down the road. This is just
14 -- this isn't to -- what is the word that I
15 am looking for, sort of analyze the merits
16 or the non-merits of the project. This is
17 their opportunity to study what they need to
18 study to the SEQRA process, and then us and
19 the residents to provide the input. So
20 we've extended the DEIS hearing. We started
21 it in July, so we've given more opportunity
22 more so for residents than for us because
23 we've had the information and we are aware
24 of it for three months. So it is an
25 opportunity for the public, and then like

1 Roland said, even if somebody has questions,
2 even us after tonight, we extend that period
3 for written comment and the reason why
4 that's very important is, it's almost the
5 same. If I am making a comment about
6 something that should be investigated or
7 studied, I can easily do that in writing as
8 well. So with that, I am going to pass it
9 to you.

10 MR. VENIZIANO: Good evening. My
11 name is Tony Veniziano, I'm here on behalf
12 of Airport Campus regarding this draft
13 generic EIS hearing. There have been two
14 hearings already, this is the third hearing,
15 we'd like to hear the comments, we are
16 already working on our responses to the
17 comments thinking through the markets, the
18 uses. For us to come back to the town we
19 need this hearing closed so we can get
20 through the comment period. I believe the
21 minimum comment limit is 10 days, whatever
22 you select would be fine.

23 We've got a written transcript or the
24 other two that we are already looking at.
25 There hasn't been any comments from the

1 public and we'd like to hear from the rest
2 of the Board tonight. I think -- let's see
3 how this goes, but I will ask you to close
4 it at the end of tonight. That's it.

5 CHAIRMAN SCHILIRO: Thank you. And
6 originally going back a few months, the
7 public comment -- the written comment was
8 targeted for the end of the month. I think
9 it is too short so we will discuss that, I
10 think 14 days is good. If another Board
11 member thinks it needs to be a little bit
12 longer but you that might be fine, but you
13 know, the process will be to close it --

14 MR. VENIZIANO: It is important to us
15 because we really need that closed to get
16 back to you.

17 CHAIRMAN SCHILIRO: Right, we said
18 that --

19 MR. VENIZIANO: So if you said it's
20 30 days, it's 30 days, and if we are getting
21 a letters from DOT and DEC and so forth it's
22 one thing, but if it's just dead time we're
23 just losing time.

24 CHAIRMAN SCHILIRO: Correct.

25 MR. VENIZIANO: Okay.

1 CHAIRMAN SCHILIRO: Okay. So if I
2 could, if I go to you first, because you
3 weren't at the last meeting.

4 MR. HUSSAIN: I was at the last one.

5 CHAIRMAN SCHILIRO: You couldn't be
6 at the week before.

7 MR. HUSSAIN: Right. Yes.

8 CHAIRMAN SCHILIRO: So let me start
9 with Saleem this way and then we'll open it
10 up to the public if they have any additional
11 comments on the report or things that
12 warrant extra study, and then we'll go from
13 there.

14 MR. HUSSAIN: Okay. So for me
15 actually the comments that I have now made a
16 couple of times, they are still the ones
17 that I stand against. I am not going to
18 make any additional comments beyond that.
19 And just to summarize, there is like really
20 three buckets of things. One was around and
21 a reevaluating on the demand and what's
22 **Comment 13-2** really needed given all the changes that
23 have happened in the last two years, and I
24 think that is warranting a reevaluation.

25 And then the second is around

1 students in some of the points we heard from
2 the Superintendent's letter. And then the
3 third is around trees. And I do think it
4 would be good to have a relook and a
5 consideration at some of the tree plans that
6 you had.

7 So these are points that I have made
8 before and that would be great to come back
9 around on them. That's it.

10 CHAIRMAN SCHILIRO: Thanks Saleem.
11 And just for clarity, the input we received
12 was from the Byram Hills School
13 Superintendent, not Valhalla. Sometimes
14 people don't -- forget that North White
15 Plains goes through Valhalla and Armonk
16 Banksville goes to Byram Hills. So that was
17 from the Byram Hills Superintendent because
18 this development wouldn't potentially impact
19 that school district.

20 MR. HUSSAIN: Exactly. Thank you --

21 CHAIRMAN SCHILIRO: Just as a
22 clarifier. Barry, do you have anything on
23 this?

24 MR. REITER: I just wanted to remind
25 you guys about the EMS part, you know, the

1 police department, you know. To take a look
2 at that and also from the fire department's
3 perspective as well. I know it was
4 addressed and I think, you know, after
5 talking to the chief at the police
6 department, he had some concerns, same as
7 the fire department.

8 CHAIRMAN SCHILIRO: Great, thanks.
9 Barb, you had a lot of comments last week so
10 I don't know if you have anything else.

11 MS. DIGIACINTO: I'm not gonna say
12 that much. I just would like to just add
13 that my two proposals, one was using the
14 site for some type of you know, sport
15 facility, you know, indoor ice rink, indoor
16 pool, outdoor fields, etc. I did get a lot
17 of positive feedback from people who watch
18 the meeting and as well as my second
19 proposal was to use the property for a sort
20 of senior living where it would do -- would
21 start with just single family residences
22 where people were very independent and yet
23 could eventually move from that to assisted
24 living and so on and so forth. And that was
25 also very well received. Thank you.

1 CHAIRMAN SCHILIRO: Thanks Barb.

2 Jose.

3 MR. BERRA: I'm going to be
4 uncharacteristically brief. I've made a
5 series of comments, including at the first
6 meeting. I want to look back over them.
7 Tony, is there -- do you have the comments
8 in a form that I could see the comments I
9 made before because I want to consider
10 whether I want to supplement them in writing
11 after the period closes, and I don't want
12 you to do anything especial I just want to
13 know if that exists.

14 MR. VENIZIANO: We have one of the
15 transcripts from the 28th, do we have the
16 second day? Yes, we have that.

17 MR. BERRA: Can you do that basically
18 by person because they are all speaking at
19 one time. So if it wouldn't be a problem to
20 get those so I could see the comments that
21 would be great.

22 MR. VENIZIANO: How long would that
23 take?

24 MR. BERRA: If that's not a problem.

25 MS. DIGIACINTO: Or you can watch the

1 meeting. Jose didn't speak at the last
2 meeting.

3 MR. BERRA: What's that?

4 MS. DIGIACINTO: You didn't speak at
5 the last meeting. You said that you wanted
6 to review your comments and you wanted to
7 speak tonight.

8 MR. BERRA: Thank you for the
9 reminder.

10 MS. DIGIACINTO: You're welcome.

11 MR. BERRA: And the review. Thanks.
12 So that would be helpful, also the
13 Conservation Board was working on it, they
14 are doing a responsible job and I want to
15 see what they come up with. They are much
16 more able to address these things than I am
17 so I want to be able to look at that too.

18 CHAIRMAN SCHILIRO: Okay. Great.
19 I'll make some comments and then if anybody
20 in the public has any. I am not gonna go
21 through some of the things that I mentioned
22 at the last meeting or the hearing, but
23 obviously the letter from the school
24 district was impactful, Byram Hills School

25 **Comment 18-3** District, and one of my main comments was

Comment 18-3
(cont'd)

1 about the age restricted component on the
2 alternative section, Chapter 18. That I
3 think should be looked at. You have senior
4 housing there and I am not sure if that
5 applies directly to age restricted, because
6 that could have a couple of different
7 meanings. So that was my main piece, to
8 make sure that was studied.

9 I may have something in writing
10 within the next week or so and if I do I'll
11 obviously submit it, but for right now I'm
12 satisfied that either I've asked it or a
13 colleague addressed it. So with that, I
14 would open it up to the public if anybody
15 has any input and again, there is a
16 stenographer here for a reason, it is a
17 hearing and they record everything and then
18 they provide it back to the applicant so
19 they have to address or study whatever needs
20 to be done.

21 MR. BARONI: I just have one comment
22 that I would like to make.

23 CHAIRMAN SCHILIRO: Oh, yes. Please.
24 Thank you Roland for reminding me.

Comment 2-3

25 MR. BARONI: Regarding the proposed

Comment 2-3
(cont'd)

1 uses. It occurred to me that perhaps we
2 should preface the proposed uses, and even
3 the existing uses that are in the district
4 as for profit uses only, that's our tax base
5 out there and I just think it's important
6 that no matter what you propose out there
7 that all of those uses stay on the tax roll.

8 MR. VENIZIANO: That's fine.

9 MR. BARONI: So if you consider that.

10 MS. DIGIACINTO: Thank you Roland.

11 Excellent.

12 CHAIRMAN SCHILIRO: Thanks Roland. I
13 don't think there is -- do we have a list
14 for this?

15 THE CLERK: I have a list, but there
16 is nobody on it.

17 CHAIRMAN SCHILIRO: Is anybody that
18 would like to comment. Ed?

19 MR. WOODYARD: No, I said it at the
20 last one.

21 CHAIRMAN SCHILIRO: The last one.
22 Okay, anybody else? Okay, good. So with
23 that being said, I would ask if there is a
24 motion to close this public hearing and then
25 subsequent to that a motion to -- so a

1 motion to close and then a motion to
2 adjourn -- I am sorry Roland, roll call?

3 MR. BARONI: And you should also set
4 the comment period.

5 CHAIRMAN SCHILIRO: Oh, yes. So
6 let's talk about that real quick. I think
7 September 30th is too short, that's what it
8 is now. I was comfortable with two weeks
9 from now which is more than the ten days
10 that the law allows. I am comfortable with
11 two weeks, but let me hear from the Board.

12 MR. HUSSAIN: I'm good with that
13 Mike.

14 MR. REITER: I am good.

15 MR. BERRA: You mentioned the
16 possibility of 20 days?

17 CHAIRMAN SCHILIRO: You did, but
18 bring it up. You discuss it.

19 MR. BERRA: I think that's a good
20 idea. It doesn't hurt the extra six days.
21 We'll move along expeditiously. Things come
22 up for people so why not just give them a
23 better shot for it. People have busy lives.

24 CHAIRMAN SCHILIRO: Is there any
25 issue?

1 MR. VENIZIANO: That's good, it will
2 help with the transcript. We'll be fine.

3 CHAIRMAN SCHILIRO: We've pushed -- I
4 don't want to say push this out, but we want
5 to make sure that the public can -- has that
6 opportunity. The hearing was opened in the
7 summer and then you -- we didn't even have
8 it on the meeting in August and then we knew
9 the next hearing was gonna be right after
10 Labor Day, right after school started and --
11 so we knew that at least by now we thought
12 that we gave the public --

13 MR. VENIZIANO: The six days won't
14 affect us.

15 CHAIRMAN SCHILIRO: Alright. So --
16 and then this gives everybody another -- we
17 have no problem with that Jose, another 20
18 days, including us.

19 MR. BERRA: Thank you.

20 CHAIRMAN SCHILIRO: If there is
21 anything else we want.

22 MR. VENIZIANO: Pick a date. What's
23 the date?

24 CHAIRMAN SCHILIRO: October --

25 THE CLERK: October 12th. 20 days is

1 October 12th. The day before the next
2 meeting.

3 CHAIRMAN SCHILIRO: Is there a
4 separate motion?

5 MR. BARONI: No, it could be part of
6 the motion that you close the public hearing
7 on the DEIS and you set the comment period
8 for "X" days.

9 CHAIRMAN SCHILIRO: So we need a
10 motion for that. Anybody want to make --

11 MS. DIGIACINTO: I make that motion.

12 CHAIRMAN SCHILIRO: -- to adjourn and
13 to accept the public comment.

14 MS. DIGIACINTO: I make the motion to
15 close --

16 CHAIRMAN SCHILIRO: I'm sorry.

17 MS. DIGIACINTO: -- a motion to close
18 the DGEIS.

19 CHAIRMAN SCHILIRO: The DEIS and then
20 the DGEIS and then set the public comment
21 for 20 days from now.

22 MS. DIGIACINTO: And then to set the
23 public comment for 20 days, which should be
24 October 12th.

25 CHAIRMAN SCHILIRO: So we need a

1 second.

2 MR. REITER: Seconded.

3 CHAIRMAN SCHILIRO: All in favor.

4 MS. DIGIACINTO: Aye.

5 MR. HUSSAIN: Aye.

6 MR. BERRA: Aye.

7 MR. BARONI: Aye.

8 CHAIRMAN SCHILIRO: Okay. And we
9 just need a motion to adjourn the zoning
10 hearing.

11 MS. DIGIACINTO: I make a motion to
12 adjourn the zoning hearing.

13 MR. HUSSAIN: I seconded.

14 CHAIRMAN SCHILIRO: All in favor.

15 MS. DIGIACINTO: Aye.

16 MR. BARONI: Aye.

17 MR. BERRA: Aye.

18 MR. HUSSAIN: Aye.

19 CHAIRMAN SCHILIRO: And if I could
20 just ask Roland for another 30 seconds again
21 for people that might be new to the process,
22 about the time now even involving well
23 before the zoning conversation, right. We
24 have to get through the FEIS as you
25 explained, but there is plenty of time

1 before we even get to the zoning
2 conversation and hearing.

3 MR. BARONI: Yes, when the FEIS is
4 submitted and you deem it complete, that's
5 the point in time that you will reopen the
6 public hearing on the rezoning and at the
7 conclusion of that public hearing you'll be
8 in a position to consider a finding
9 statement.

10 CHAIRMAN SCHILIRO: Great.

11 MR. VENIZIANO: Okay, great. Thank
12 you very much.

13 CHAIRMAN SCHILIRO: Applicant. Thank
14 you for coming.

I, Eunice Patchen, Certified Court Reporter,
before whom this proceeding was taken, do hereby state
on the Record:

This to be a true and accurate transcript of
the aforesaid proceeding and that due to the
interaction in the spontaneous discourse of the
proceedings, dashes (--) have been used to indicate
pauses, changes in thought, and/or talk-overs; that
same is the proper method for a Court Reporter's
transcription of proceedings, and that the dashes (--)
do not indicate that words or phrases have been left
out of this transcript;

That any words and/or names which could not
be verified through reference material have been
denoted with the parenthetical "(ph)."

Eunice Patchen

Re: **Notice of Intent to be Lead Agency**
Airport Campus (formerly MBIA Insurance Corp)
113 King Street
Town of North Castle, Westchester County, NY
Tax Map #: 113.04-1-14
DEP Log #: 2002-KE-0036-SQ.2

Dear Mr. Adam R. Kaufman and Members of the Town Board:

The New York City Department of Environmental Protection (DEP) has received from AKRF, Inc. the Draft Environmental Impact Statement (DEIS) dated June 23, 2021 for the above referenced project.

Based upon the review of the submitted documents, DEP respectfully submits the following comments for the Board's consideration:

- | | |
|-------------|---|
| Comment 3-2 | <p>1. Given the critical nature of Kensico Reservoir as a terminal reservoir within the NYC Water Supply system, the proposed zoning changes if allowed, may result in over development of the site in the near future. Although only 10% percent is proposed per the current plan, this zoning change noted in the DEIS will present more opportunities to expand neighboring parcels in proximity to the reservoir and may be detrimental to water quality. In this regard, changes in weather patterns due to global warming and the effects of fluctuating intensity of precipitation and storm events and their direct impacts on these proposals must be evaluated, reduced, eliminated and/or mitigated.</p> |
| Comment 4-1 | <p>2. Executive summary, 1D.4, Geology and Soils, indicates that based on the geotechnical investigation, the lower level of the multifamily structure will extend 7 to 8 feet below the groundwater table. The subgrades must be properly stabilized to increase structural integrity and retain strength during wet conditions. More information is needed on how to properly stabilize the wet sub grades for better strength without impacting groundwater during construction.</p> |
| Comment 9-6 | <p>3. The DEIS fails to note that NYCDEP approval will be required for the proposed sewage system/sewage connection pursuant to Section 18-37(c) of the <i>Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and its</i></p> |

Sources (Watershed Rules and Regulations). The applicant should note this permit requirement preferably in the Executive Summary Section 1A.4.

- Comment 4-2** 4. Chapter 4, Geology & Soils: The Section notes that there will be an excess of cut material from the proposed project and it is estimated that more than 20% of excess material that cannot be used onsite will be hauled away. Onsite areas designated to receive excess material must be identified and any associated impacts with additional clearing and grubbing, particularly near wetlands and watercourses should be fully addressed and mitigated.
- Comment 4-3** 5. Impacts of dewatering excavations or groundwater leaching from material cut sections should be fully addressed in the DEIS. In addition, construction during freeze/thaw conditions should also be addressed.
- Comment 4-4** 6. Figure 4-1 Project Site – “Unique Geological Features” identifies all areas of existing rock outcropping. On the same plan, several points with NYCDEP labels are shown. The project applicant must clarify what they represent. The watercourses flagged by DEP during the November 2018 site walk with JMC must also be identified on the plans.
- Comment 3-2** 7. The DEIS chapters that mention potential zoning changes and related impacts emphasize that no specific proposals for maximum build out for the project site and the Swiss Re site are being pursued at this time. As full build out is a possibility, the DEIS must include a discussion of the possible environmental and water quality impacts of such future action, rather than deferring review of impacts to the site plan and environmental review process. While a detailed assessment of potential impacts may be difficult to quantify, the DEIS should include an assessment of the maximum development potential of this area under the existing zoning compared with the maximum development potential under the proposed zoning. Due to the proximity of Kensico Reservoir, DEP strongly urges the Town of North Castle to limit those possibilities thereby reducing further expansion in adjacent areas.
- Comment 17-1** 8. Although general construction sequencing has been included, a more detailed sequencing plan is critical to ensure effective mitigation of potential water quality impacts resulting from proposed construction.
- Comment 8-5** 9. The DEIS should include a comparison of pre-and post-development pollutant loading rates from the various alternatives. The peak discharge rates and increases in the volume of runoff for the various design storms and their significance at the various discharge points for each of the alternatives should also be included. Erosion control plans for the proposed alternatives must be included in the DEIS as these plans are necessary to demonstrate that impacts due to erosion and sedimentation during the construction phase for each alternative can be properly avoided and/or mitigated. These factors must be evaluated in sufficient detail for the various alternatives in order to make a reasonable judgment.

Comment 8-4 10. Chapter 8 of DEIS mentions that increases in pollutant loading are generally attributed to lawn fertilizers and pet/animal wastes, which are common in residential developments and not considered significant when properly handled and treated through on-site storm water best management practices. The applicant should demonstrate how this claim could be substantiated given the significant increase in residential components on site.

Comment 3-2 11. The proposed zoning modifications to the DOB-20A zone allow the conversion of one (1) square foot of office space to 1.25 square feet of residential with "density bonuses" for senior or assisted living. Alternative 4, static density, considers a 1 to 1 conversion that results in less development, less water and sewer demand and would likely pose less of an impact from an environmental and water quality standpoint.

Comment 3-2 12. The proposed zoning modifications would allow maximum building coverage to increase from 10% to 15% (see table Page 1-9) - this could potentially lead to more impervious surfaces than currently allowed, which would be potentially detrimental to water quality. The provided coverages associated with the proposed action are much less than the 15% so it's not clear why a coverage percentage needs to be increased at all.

Comment 3-2 13. The proposed zoning modifications would impact other parcels in the Kensico Reservoir basin, making those properties more likely to be developed. Any proposed zoning modifications should properly balance the needs of property owners with potential adverse impacts to Kensico Reservoir.

Comment 8-6 14. The applicant concludes that the Proposed Project would not result in an increase to impervious surfaces when compared to the currently approved site plans or the prior residential condition in the Cooney Hill area, yet it does represent an increase of approximately 2.2 acres of impervious surface when compared to the existing condition. Please have the applicant clarify.

Comment 3-1 15. Section 2C.5, Appendix B-1, and Exhibit E of the DEIS note the following with regard to revocation of the conservation easement (~ 6 acres) west of Weber Place: "the Applicant has satisfied the requirements for the revocation of that portion of the conservation easement deemed to be revocable; however, the Proposed Project does not include any structures, roads, or drives within the revocable portion of the easement." It appears that the revocable portion of the easement has met conditions to be revoked - does this mean the easement no longer exists? If so, the fact that they are not currently building in this area doesn't mean that the area couldn't be developed in the future. The Town should consider requiring a larger irrevocable easement to replace all or some of the previous revocable easement.

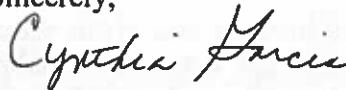

Comment 7-3 16. Page 1-17 of the DEIS indicates that there will be minor impacts to a Town regulated wetland buffer. Ideally, given the sensitive location of the site adjacent to Kensico Reservoir, the proposed gravel access road could be reconfigured to avoid any impacts to wetlands or their buffers.

17. The applicant notes that in accordance with the DEIS Scoping Document, traffic resulting from the full occupancy of the office building on the Swiss Re parcel (which is approximately 50 percent occupied), and re-occupancy of the project site's existing office buildings (for office use) were included in the No Build condition and that the proposed action will result in less traffic. This conclusion is questionable as new residential, hotel, other uses would likely result in more traffic to the site than the current condition and the timing/peaks of that traffic may well be different.

Comment 10-18

Thank you for the opportunity to provide comments. You may reach the undersigned at cgarcia@dep.nyc.gov or (914) 749-5302 with any questions or if you care to discuss the matter further.

Sincerely,

Cynthia Garcia, Supervisor
SEQRA Coordination Section

Re: 113 King Street & Associated Properties
Amendment to Zoning Petition

Honorable Supervisor and Members of the Town Board:

On behalf of Airport Campus I-IV (“Petitioner” or “Applicant”), we hereby submit this amendment to their Zoning Petition which is currently pending before your Board.

On September 29, 2022, we filed an amendment to the Applicant’s Zoning Petition to request that the entire Site be rezoned to R-MF-SCH, the Town’s senior age-restricted residential zone. The Applicant’s September submission outlined a plan for reuse of the southern office building for 50 age-restricted multi-family apartments and construction of 125 new age-restricted townhouses including affordable units.

The Applicant’s multifamily project was generally well received in comparison to the Applicant’s mixed use plan of development for the Site. In a November 21, 2022 letter from the Town Planner to your Board, one modification to the proposed multifamily rezoning was identified for further consideration, as follows:

“The Town Board has previously discussed the desirability of potentially entertaining an alternative that would provide 125 market rate fee simple townhouses placed in the R-MF-A zoning district (Residential Multi-Family) and placing the two-bedroom age-restricted apartments within the R-MF-SCH zoning district (Multi-Family Residential Senior Citizen Housing).”

We understand this modification was identified based on a Town preference for fee simple taxation of any townhome units.

On December 14, 2022, the property owner and development team appeared before your Board to present the plan and discuss the suggested rezoning modification as outlined in the Town Planner's November 21st letter. At that meeting, a majority of the Town Board members expressed a preference for fee simple taxation of market rate townhomes and the reuse of the existing 100,000 s.f. office building for 50 age restricted units. The School District subsequently acknowledged to the Town that it could accommodate school aged children anticipated from the townhome portion of the project and that, overall, the modified proposal was a "good compromise".

In light of the foregoing, the Applicant hereby amends its Zoning Petition to add for Town Board consideration an alternative that incorporates both R-MF-SCH and R-MF-A rezoning for the Site. An updated pFEIS is also enclosed which highlights how under this alternative 4.5 acres would be zoned R-MF-SCH and 34.3 acres zoned R-MF-A. A summary of the benefits and exhibits associated with this multifamily alternative are enclosed for your consideration.¹ Upon rezoning, the Applicant would proceed with a subdivision application to create lots implementing this overall plan and Toll Brothers' acquisition and development of townhomes with an average livable area of 2,500-sf.

There is one additional item we touched on at the December 14th meeting that relates to the Town's preferred approach. If the Site were zoned entirely R-MF-SCH or entirely R-MF-A, the total number of multifamily units for the project are permitted under the Town's Code. Incorporating both zones for portions of the Site though, as preferred by the Town, affects the density and dimensional calculations for the R-MF-SCH district.

As such, as part of petitioning for the Town Board's preferred rezoning approach, and to clarify Section 355-27B(2) of the Town Code as applied to this project and Site, we hereby incorporate a proposed minor text amendment into the amended Zoning Petition. Section 355-27B(2) would be amended to add a fourth sentence to that Section, as follows:

"...Any conversion of an existing office building to multifamily senior citizen use shall not have a required FAR in the R-MF-SCH zoning district and the Town Board shall set and determine the dimensional standards and design considerations for any such conversion at the time of rezoning and notwithstanding requirements set forth in other sections of the Zoning Code."

This language would continue to preserve Town Board legislative rezoning discretion over establishing any R-MF-SCH sites in the community. The text addition would further facilitate reuse and conversion of existing office building space that may be part of any site ultimately rezoned to R-MF-SCH.

¹ The R-MF-SCH/R-MF-A plan outlining the zoning designations is also attached.

Finally, as noted in September, the Applicant anticipates petitioning this Town Board to extend the water district to incorporate the Site. A new water line is being constructed by Westchester Joint Water Works (“WJWW”) from the County Airport to the end of New King Street. The Applicant continues to coordinate with WJWW, County and Town officials on the design of a water line extension to the Site and has confirmed it is viable for a municipal water supply. Additionally, the project engineers have designed a modest above-ground holding tank behind the proposed parking structure in order to address relevant fire control regulations for the project development at the Site as shown on the subdivision plan.²

We hereby request that this amended Zoning Petition to rezone the 38-acre property to both the R-MF-SCH and the R-MF-A zones, as well as the minor zone text clarification to Section 355-27B(2) of the Code, be formally accepted at your next Town Board meeting. We would request that at the Town Board’s February 8th meeting, the amended Zoning Petition be referred to the Town Planning Board, the County Planning Board, and your consultants and that the ongoing review of the pFEIS by your consultants, as updated with this filing, be continued.

Thank you for your consideration.

Very truly yours,

Anthony F. Veneziano, Jr.

ANTHONY F. VENEZIANO, JR.

AFV/kj
Encls.

² The Applicant has engineered for a pump at the terminus of the water line proposed for extension to the Site in the event the Town and Water District elect to pursue further extension of water lines to other properties along Route 120 or in the Hamlet.

113 KING STREET, ARMONK, NY
DESCRIPTION OF AMENDED ZONING PETITION & PROJECT

PROJECT DESCRIPTION

The Applicant proposes to repurpose and redevelop approximately 38.8 acres of contiguous property known as “Airport Campus” (Proposed Project) located at 113 King Street in the Town of North Castle, Westchester County, New York (Project Site).

The Proposed Project would adaptively repurpose the southernmost of the two existing three-story office buildings on the Project Site as a multifamily residential building with approximately 50 two-bedroom, age-restricted (55+) units. Parking for the multifamily building would be accommodated in a new, approximately 51-space surface parking lot and a new, 2-story, approximately 60-space parking structure. Additional residential uses would be introduced to the north and east of the repurposed office building in the form of 125 attached, two-story, three-bedroom, townhouses. To facilitate development of the Proposed Project, the Project Site’s existing 29-foot tall, two-story, approximately 316-space parking garage and the 37.5-foot tall, three-story, approximately 161,000 square foot northern office building will be removed.

To redevelop the Project Site as a residential community, the Applicant has amended its Zoning Petition to request that the Town Board map a portion of the Project Site (4.48 acres) around the office building slated for reuse within the Town’s existing Multifamily-Senior Citizen Housing (R-MF-SCH) Zoning District, and the remaining portion of the Project Site (34.30 acres) within the Town’s Residential Multifamily (R-MF-A) Zoning District.

PROJECT PURPOSE

The Proposed Project would activate an area of the Town that was historically a mix of office and single-family residential uses which, over the last 15-20 years, has seen limited interest from corporate office tenants and has been lacking a traditional neighborhood identity. Changing market conditions have put significant pressure on large office campus parcels in Westchester and the broader region. Since its acquisition of the property in 2015, the Applicant has been marketing the property to potential tenants, to date without success. The purpose of the Proposed Project is to provide a solution to these challenges with respect to the Project Site, consistent with the Town’s 2018 Comprehensive Plan, and in a way that minimizes the impacts and maximizes the benefits to the Town. As part of the 2018 Comprehensive Plan process, the Town considered current market conditions with respect to office campuses such as the Project Site. The Project Site is specifically referenced in several places in the Town’s 2018 Comprehensive Plan, with respect to both its locational importance and the need to expand its development potential to accommodate a mix of infill development including, but not limited to, residential uses.

FISCAL BENEFITS TO THE COMMUNITY

The Proposed Project would stabilize the tax revenue generated by the Site by introducing a stable, in-demand, consistent tax-generating use. It would generate approximately \$3.33 million in annual property tax revenue to the various taxing jurisdictions, including approximately \$541,705 for the Town of North Castle and \$2.25 million for the Byram Hills Central School District (BHCS), which is an increase of approximately \$1.80 million per year for these two districts from the current property taxes paid by the Project Site, and an overall increase approximately \$2.08 million per year.

The Proposed Project would introduce new public school-age children to the BHCS. However, the increase in property tax revenue would cover the potential increase in costs to the district, as confirmed by the BHCS.

To the extent the Proposed Project results in any *de minimis* increase in emergency service calls to the Project Site (as compared to calls made to the occupied office campus), it will generate \$541,705 per year in tax revenue for the Town, and \$60,403 for the Fire District, which could be utilized to offset any impacts of the Proposed Project on the Town's emergency service resources. Overall, the Proposed Project would more than cover the potential increase in Town costs associated with the development, consistent with the low-impact nature of the use proposed.

I. SUMMARY

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared for the proposed residential development project at the 38.8-acre Airport Campus site formally known and approved as the MBIA Headquarters Expansion. The MBIA Headquarters Expansion project was approved by the Town of North Castle and NYCDEP on August 22, 2005 and amended on July 14, 2006. The site is bordered by Cooney Hill Road to the north, Lands of the City of New York to the south and west, and King Street (NYS Route 120) to the east.

Based on meeting with NYCDEP on November 9, 2018, the owner was going to amend the SWPPP based on the same design criteria as the original SWPPP and utilize the most current storms. However, the New York State Department of Environmental Conservation is looking at this as a new project. We have supplemented the approved SWPPP with additional standard and green infrastructure practices to provide runoff reduction volume. This preliminary Stormwater Pollution Prevention Plan has been designed in accordance with the requirements of the Town of North Castle, the New York City Department of Environmental Protection (NYCDEP) "Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and Its Sources", amended 11/29/2019, and the New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit No. GP-0-20-001 for Stormwater Discharges from Construction Activity. The erosion and sediment controls will be designed in accordance with NYS Standards and Specifications for Erosion and Sediment Control (Blue Book), last revised November 2016.

The SWPPP has been designed to ensure that the quantity and quality of stormwater runoff during and after development are not substantially altered from pre-development conditions.

DL-3	0.23	4.2 E+10
DP-4	0.11	2.8 E+10

II. INTRODUCTION

This report addresses the Stormwater Pollution Prevention Plan for the proposed office conversion and residential townhouse development at Airport Campus. The proposed project includes the conversion of the existing three-story office building into a 50-unit apartment building with a parking garage, and the construction of 125 townhomes and a clubhouse building. The existing 38.8-acre site is bordered by Cooney Hill Road to the north, Lands of the City of New York to the south and west, and King Street (New York State Route 120) to the east.

The site is approximately 500 feet from the Kensico Reservoir, and is separated from the reservoir by undeveloped, forested land. These lands are owned by the City of New York to help protect the Kensico Reservoir. These lands help provide an effective vegetated buffer that will remain forever undeveloped.

III. STUDY METHODOLOGY

A study of the stormwater drainage characteristics was conducted and peak rates of runoff were calculated based on the standards of the United States Department of Agriculture Soil Conservation Service publication "Urban Hydrology for Small Watersheds" (Technical Release No. 55 "TR-55"), dated June, 1986. The methodology of TR-55 considers a variety of characteristics for watershed areas, including soil types, soil permeability, vegetative cover, time of concentration, topography, rainfall intensity, ponding areas, etc.

Site and upstream tributary and downstream outfall facilities were reviewed to confirm existing conditions in the immediate drainage areas. A drainage area map was then developed from a topographical survey.

A time of concentration for each drainage area in the existing condition was calculated using the methods described in Chapter 3 of TR-55. Soil types were delineated on the site according to the boundaries shown on maps of the project area contained in the "Soil Survey of Westchester and Putnam Counties, New York" prepared by the Soil Conservation Service/U.S. Department of Agriculture, issued September, 1994. Land cover types were determined within each hydrologic group soil. The Bentley PondPack software package version V8i was used to calculate runoff curve numbers and times of concentration for each drainage area using TR-55 methodology. A maximum reach length of 150 feet was used for sheet flow in accordance with the practice of the Westchester County Soil and Water Conservations Service. Manning's kinematic solution was used to determine the travel time of sheet flow. The 2-year, 24-hour precipitation amount of 3.43 inches was used in the equation. The travel time for shallow concentrated flow was computed using Figure 3-1 and Equation 3-1 of TR-55. Hydrologic calculations were performed using the PondPack software.

The peak rates of runoff for the 1, 2, 10, 25, 50- and 100-year recurrence interval storms were analyzed for the entire project area. The Type III distribution design storm for a 24-hour duration was used and the mass rainfall for each design storm was taken from the Extreme

Precipitation in New York & New England developed by the Natural Resource Conservation Service (NRCS) and the Northeast Regional Climate Center (NRCC) as follows:

24 Hour Rainfall Amounts

Design Storm Recurrence Interval	Inches of Rainfall
1 Year	2.80
2 Year	3.43
5 Year	4.31
10 Year	5.13
25 Year	6.46
50 Year	7.69
100 Year	9.17

IV. STORMWATER POLLUTION PREVENTION PLANNING CRITERIA

A Stormwater Pollution Prevention Plan report will be submitted to the Town of North Castle and the NYCDEP for approval. The report will be prepared in accordance with the requirements of the NYSDEC SPDES General Permit No. GP-0-20-001 for Stormwater Discharges from Construction Activity and the NYCDEP "Rules and Regulations for the Protection from Contamination, Degradation and Pollution of the New York City Water Supply and Its Sources", amended 11/29/2019. The Stormwater Pollution Prevention Plan includes stormwater management practices from the publications "New York State Stormwater Management Manual", revised January 2015 and "Reducing the Impacts of Stormwater Runoff from New Development", dated April 1993.

A full Stormwater Pollution Prevention Plan has been prepared for this project because disturbance to the site will be in excess of one acre. Stormwater facilities have been designed to ensure that the quantity and quality of stormwater runoff during and after development are not substantially altered from pre-development conditions.

V. EXISTING HYDROLOGIC CONDITIONS

This project is located in the drainage basin of the Kensico Reservoir. The majority of the project area is developed as commercial and residential uses. The remainder of the project area is covered by areas of woods, meadow and lawn. The topography of the project area is generally moderately sloped. Soils on the site are predominately hydrologic groups B and C, which are

well drained to somewhat excessively drained soils as classified by the USDA Soil Conservation Service.

For purposes of analysis, the project area was divided into nine major drainage areas (EDA-1A, EDA-1B, EDA-1C, EDA-1D, EDA-2A, EDA-2B, EDA-2C, EDA-3, EDA-4) draining to four design points/lines (DP-1, DL-2, DL-3, and DP-4), which are depicted on drawing DA-1 "Existing Drainage Area Map". Design Point 1 (DP-1) is located at the existing drainage manhole along the King Street site entrance. Design Line 2 (DL-2) is located south of the property along the adjacent property (Lands of the City of New York). Design Line 3 (DL-3) is located along the property's northern and most northwestern property lines. Design Point 4 (DP-4) is located at the most southeastern corner of the property. The numbers included in the name of each drainage area correspond to the Design Point/Design Line they drain towards.

Drainage Area EDA-1A is located in the eastern portion of the commercial development of the property. The 6.11-acre drainage area consists of the eastern half of the northerly office building, the main driveway, a parking area, landscaped and lawn areas, some woods, and a portion of King Street roadway fronting the site. Runoff from the office and driveway is collected by roof drain leaders, catch basins and underground pipes and is discharged to Design Point 1. The remainder of the drainage area flows overland and is collected by catch basins along the west side of King Street which discharge to the Design Point 1.

Drainage Area EDA-1B consists of the majority of the existing commercial property including the parking structure, the existing southerly office building, approximately half of the northerly office building, all parking and associated driveways and landscaped and lawn areas. Runoff from the 9.49-acre drainage area is collected by catch basins and underground pipes and is discharged to the existing pond where it is detained. Stormwater runoff is then conveyed via underground pipes to DP-1.

Drainage Area EDA-1D is located to the south of the property and is all wooded. Runoff from the 17-acre drainage area flows in a northerly direction to a low area to the south of the existing pond, which discharges to the existing pond (similar to EDA-1B) through an 18-inch culvert. Runoff from EDA-1D combines with EDA-1A. As discussed, stormwater runoff is then conveyed via underground pipes to DP-1.

Drainage Areas EDA-2A, EDA-2B and EDA-2C with areas of 6.15, 10.05 and 2.80 acres, respectively are located in the north of the property and consist of landscaped areas, lawn areas, as well as areas of meadow and woods. Runoff from these drainage areas flows overland in a southwesterly direction towards Design Line 2. The runoff from EDA-2B flows off the site at Junction 2B to the stream, which begins just to the south of the property line. The runoff travels in a southerly direction for approximately 700 feet through lands of the City of New York to Webers Cove of the Kensico Reservoir.

Drainage Area EDA-3 is in the northwestern portion of the property and consists of landscaped/lawn areas and woods. Runoff from this is 3.50-acre drainage area flows overland in a westerly direction to Design Line 3.

Drainage Area EDA-3 is in the southeastern portion of the property and consists of landscaped/lawn areas and woods. Runoff from this is 0.81-acre drainage area flows overland in a westerly direction to Design Point 4.

There are numerous storm drainage facilities on the exiting property. Within EDA-1B there are five major storm pipe systems. The first flush runoff from the parking structure is diverted to a water quality basin to the east of the existing pond and the excess flows bypass to the existing pond. There is also a water quality basin to the west of the existing pond which treats the first-flush runoff from the southerly office building and then conveys the excess flows to the existing pond. A storm pipe system collects the runoff from the parking area to the north of the parking structure and conveys it to the existing pond. There is a large storm pipe system which collects the runoff from the parking area to the north of the northerly office building and the westerly half of the northerly office building roof and conveys it to the existing pond. The existing pond has a water surface area of approximately 1.2 acres and has a storage capacity of approximately 200,000 cubic feet. Discharge from the pond is controlled by one 12-inch culvert at elevation 405.40 and three 12-inch culverts at elevation 406.75. Outflow from the pond is conveyed by a 24-inch storm pipe.

Within EDA-1A there is one major storm drainage pipe which collects the roof-top runoff from the easterly half of the northerly office building and the driveway runoff. This pipe system connects to the outflow pipe from the existing pond. Two catch basins along the west side of King Street collect the majority of the overland flow from the eastern portion of EDA-1A.

The peak rate of runoff to the four design points/lines for each storm is shown on the table below:

Table 1
Summary of Existing Peak Rates of Runoff
(All Flows in Cubic Feet Per Second)

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 year	5.82	9.92	0.67	0.11
2 year	8.69	15.86	1.42	0.29
5 year	13.51	26.36	2.92	0.65
10 year	18.18	36.58	4.48	1.05
25 year	26.42	55.08	7.44	1.82
50 year	33.70	71.85	10.22	2.55
100 year	45.05	93.30	13.87	3.51

The peak volumes of runoff to the four design points for each storm is shown on the table below:

Table 2
Summary of Existing Peak Runoff Volumes
(Cubic Feet)

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 year	68,146	45,735	4,515	785
2 year	102,295	69,455	7,757	1,435
5 year	161,991	111,065	13,852	2,697
10 year	222,515	151,834	20,130	4,026
25 year	339,710	226,854	32,167	6,623
50 year	450,922	296,058	43,632	9,132
100 year	604,131	386,088	58,885	12,504

VI. FUTURE HYDROLOGIC CONDITIONS

Impacts are anticipated as a result of the proposed development with respect to existing hydrologic features. The proposed development will increase impervious surfaces by approximately 7.7 acres. This preliminary Stormwater Pollution Prevention Plan has been designed to ensure that the quantity and quality of stormwater runoff during and after development are not substantially altered from pre-development conditions. As a result of its implementation, it is expected that there will be no significant impact on downstream

properties, wetlands, ponds, and streams and watercourses including the New York City Watershed and the Kensico Reservoir and its floodplain and related wetlands.

In order to determine the post-development rates of runoff generated on-site, the following drainage areas were analyzed in the post-development conditions. These areas are graphically depicted on Drawing DA-2 "Proposed Drainage Area Map" located in Appendix 'N.'

As previously discussed, four separate Design Points/Design Lines (DP-1, DL-2, DL-3, and DP-4) were identified for comparing peak rates of runoff in existing and proposed conditions. Under proposed conditions 16 drainage areas (PDA-1A-1, PDA-1A-2, PDA-1A-3, PDA-1A-4, PDA-1B-1, PDA-1B-2, PDA-1B-3, PDA-1C, PDA-1D, PDA-2A, PDA-2B-1, PDA-2B-2, PDA-2B-3, PDA-2C, PDA-3 and PDA-4) were identified based on proposed drainage divides. The numbers included in the name of each drainage area correspond to the Design Point/Line they drain towards.

Under proposed conditions nine drainage areas (PDA-1A-1, PDA-1A-2, PDA-1A-3, PDA-1A-4, PDA-1B-1, PDA-1B-2, PDA-1B-3, PDA-1C, PDA-1D) drain towards Design Point 1.

Drainage Area PDA-1A-1 is 2.86 acres in size and is located along the eastern portion of the property and consists of a portion of the main roadway entrance and landscaped/lawn areas. This drainage area also consists of a portion of King Street that is collected at Design Point 1. Like existing conditions, stormwater runoff along the roadway is collected via roadside drain inlets and is conveyed to Design Point 1, while the remainder of the drainage area flows overland and is collected by catch basins along the west side of King Street which discharge to Design Point 1.

Drainage Area PDA-1A-2 is 0.44 acres in size and is in the southeast corner of the site. This area contains a portion of proposed entrance roadway and some lawn area. The roadway portion is collected by catch basins and conveyed to the proposed bioretention area after pretreatment from a proposed water quality structure. The bioretention area provides water quality and runoff reduction for this drainage area. The bioretention area outlets to the storm pipe system that is conveyed to Design Point 1.

Drainage Area PDA-1A-3 is 0.50 acres in size and is in the southeast corner of the site. This area contains lawn, some patios and a proposed dry detention basin which collects bypassed

stormwater from PDA-1A-4 and releases it to Design Point 1.

Drainage Area PDA-1A-4 is 6.12 acres in size and is in the southern portion of the site. This area consists of proposed townhomes, roadway, driveway, and various landscaped/lawn areas. This drainage area is conveyed to the proposed infiltration basin through catch basins and pipe collection system and some lawn/landscaped area through a swale along the eastern side of the drainage area. The proposed system includes a bypass manhole which will convey most of the smaller storms towards the pretreatment water quality structure then infiltration basin and most of the higher storms to the dry detention basin located in drainage area PDA-1A-3. Most of this drainage area is redevelopment, as shown on Figure 2, titled "Redevelopment Figure." The figure represents all areas that are new impervious area and all areas that are redeveloped impervious area for the entire site. This drainage area is the only area being considered as redevelopment in our calculations, since a very large portion of it is shown as redeveloped impervious area. Calculations are provided that indicate that this drainage area provides the required water quality volume, runoff reduction, and peak rate runoff reduction to the Design Point 1.

Drainage Area PDA-1B-1 is 3.65 acres in size and is located on the southwestern portion of the site. This drainage area consists of the existing southerly office building, which is proposed to be converted to apartments, and existing pond. Like existing conditions, runoff along this drainage area will be collected via by catch basins and underground pipes or overland flow to the existing pond where it is detained and eventually conveyed via underground pipes to DP-1. The existing pond in this area is proposed to be used as additional storage, water quality, and peak rate attenuation for various other drainage areas.

Drainage Area PDA-1B-2 is 0.74 acres in size and is in the southwestern portion of the site, to the north of the existing southerly office building. This area consists of the proposed two-story garage, parking and some lawn/landscaped area. The area is treated for water quality and runoff reduction by a proposed subsurface infiltration system consisting of 70 StormTech SC-740 chambers. Runoff is collected and directed through a stormwater pipe conveyance system to a water quality structure for pretreatment. Larger storms are bypassed to the existing pond in drainage area PDA-1B-1-1.

Drainage Area PDA-1B-3 is 0.62 acres in size and is in the southern portion of the site, to the east of and adjacent to the existing pond. This area consists of townhomes and some lawn/landscaped area. Roof drainage is collected and directed through a stormwater pipe conveyance system and outlets into a proposed bioretention area, which outlets to the existing pond. A bypass structure is proposed to direct the 1-year storm through a pretreatment structure and bioretention area, and larger storms are conveyed directly to the existing pond in drainage area PDA-1B-1.

Drainage Area PDA-1C is 3.90 acres in size and is in the center of the site. This area consists of townhomes, roadway/driveways, and some landscaped/lawn areas. The area is treated for water quality and runoff reduction by a proposed bioretention area. The stormwater is conveyed to the bioretention area through stormwater pipes and surface flow. The pipe conveyance system includes a bypass manhole which directs the 1-year storm volume through a pretreatment water quality structure and the bioretention area, which then is conveyed to the pond located in drainage area PDA-1B-1. A majority portion of the larger storms bypass the bioretention area and are conveyed directly towards the pond in PDA-1B-1.

Drainage Area PDA-1D remains unchanged under future conditions. As discussed under existing conditions, this drainage area is located to the south of the property and is all wooded. Runoff from the 17-acre drainage area flows in a northerly direction to a low area to the south of the existing pond, which discharges to the existing pond through an 18-inch culvert. Runoff from PDA-1D combines with PDA-1B-1, PDA-1B-2, PDA-1B-3 and PDA-1C. As discussed, stormwater runoff is then conveyed via underground pipes to DP-1.

Drainage Area PDA-2A is 2.62 acres and is in the center of the site along the southwestern property lines inner corner. This area consists mainly of some woods and grass. This area also contains wetlands within it. Runoff from the drainage area flows overland in a southwesterly direction to Design Line 2.

Drainage Area PDA 2B-1 is 0.55 acres and is along the southern line property of the northern portion of the site. This area consists of woods and grass. Runoff from the drainage area flows in a southerly direction to Design Line 2.

Drainage Area PDA-2B-2 is 12.54 acres and is located in the northern portion of the property. This area is the majority of the northern portion of the site and contains townhomes, a

clubhouse, pool area, parking area roadways, driveways and landscaped/lawn areas. The majority of stormwater from this area is directed through stormwater conveyance systems to the proposed infiltration basin. The infiltration basin is designed to infiltrate the entire 1-year storm, therefore providing water quality and runoff reduction. A bypass manhole has been designed to convey the 1-year storm into a pretreatment water quality structure then to the infiltration basin and a majority portion of the larger storms to be conveyed directly to the proposed dry detention basin, which is designed to provide storage and attenuate the peak runoff rates. The infiltration basin is sized to provide ample storage; however, a spillway weir is designed to overflow into the proposed detention basin (elevation does not reach spillway weir during any storm calculations). The detention basin outlets with a control structure, designed to reduce peak runoff from existing conditions, to Design Line 2.

Drainage Area PDA 2B-3 is 1.47 acres and is in the southern area of the northern portion of the site. This area consists of patios and grass. Runoff from the drainage area flows overland into the detention basin.

Drainage Area PDA-2C is 1.17 acres and is in the southwestern corner of the northern portion of the site. This area consists mainly of woods and grass areas. Runoff from the drainage area flows overland in a southerly direction to Design Line 2.

Drainage Area PDA-3 is 2.18 acres and is located along the most western property line. This area consists mostly of woods and grass. Runoff from the drainage area will flow overland in a westerly direction to Design Line 3.

Drainage Area PDA-4 is 0.57 acres and is in the most southeastern corner of the site. This area consists of grass and some woods. Runoff from the drainage area will flow overland in an easterly direction to Design Point 4.

The preliminary Stormwater Pollution Prevention Plan for the project is designed to control the rate of runoff from the project area and thus eliminate any adverse downstream impacts. Stormwater Management Basins will reduce the peak rate of runoff from the developed site to a rate of flow as not to exceed that which presently runs off the project area in its present condition. The Stormwater Pollution Prevention Plan has been designed to meet the requirements of the Town of North Castle, the NYSDEC and the New York City Department of Environmental Protection (NYCDEP).

To determine the volume of storage required to detain the 100-year storm recurrence interval event, hydrographs were developed for the proposed drainage areas. Hydrographs are also developed for the 1, 2, 5, 10, 25- and 50-year storms. Proposed peak rates of runoff and percent reduction from existing conditions are shown on the tables below:

Table 3
Summary of Proposed Peak Rates of Runoff
(All Flows in Cubic Feet per Second)

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 year	4.61	2.08	0.30	0.07
2 year	6.85	3.42	0.70	0.21
5 year	10.61	5.98	1.54	0.46
10 year	14.79	8.49	2.45	0.74
25 year	22.17	13.53	4.20	1.28
50 year	28.49	29.26	5.86	1.79
100 year	38.65	49.23	8.06	2.47

The percent reductions in peak rates of runoff from proposed to existing conditions are shown on the table below:

Table 4
Percent Reductions in Peak Rates of Runoff

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 Year	20.8%	79.0%	55.2%	36.4%
2 Year	21.2%	78.4%	50.7%	27.6%
5 Year	21.5%	77.3%	47.3%	29.2%
10 Year	18.6%	76.8%	45.3%	29.5%
25 Year	16.1%	75.4%	43.5%	29.7%
50 Year	15.5%	59.3%	42.7%	29.8%
100 Year	14.2%	47.2%	41.9%	29.6%

The peak volumes of runoff to the four design points for each storm is shown on the table below:

Table 5
Summary of Proposed Peak Runoff Volumes
(Cubic Feet)

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 year	31,312	12,869	2,328	553
2 year	58,837	28,686	4,162	1,010
5 year	100,778	65,784	7,684	1,898
10 year	162,054	94,671	11,366	2,833
25 year	289,152	163,408	18,512	4,661
50 year	407,414	229,135	25,383	6,426
100 year	569,767	314,549	34,587	8,799

The percent reductions in peak runoff volumes from proposed to existing conditions are shown on the table below:

Table 6
Percent Reductions in Peak Runoff Volumes

Storm Recurrence Interval	DP-1	DL-2	DL-3	DP-4
1 year	54.1%	71.9%	48.4%	29.6%
2 year	42.5%	58.7%	46.3%	29.6%
5 year	37.8%	40.8%	44.5%	29.6%
10 year	27.2%	37.6%	43.5%	29.6%
25 year	14.9%	28.0%	42.5%	29.6%
50 year	9.6%	22.6%	41.8%	29.6%
100 year	5.7%	18.5%	41.3%	29.6%

VII. STORMWATER POLLUTANT LOADING ANALYSIS

A stormwater pollutant loading analysis was performed for each drainage area under existing conditions. The pollutants analyzed were total phosphorus (TP) and fecal coliform (FC). Pollutant loading rates and removal efficiencies from the East of Hudson Watershed Corporation publication "Stormwater Retrofit Project Design Manual Project Years 6-10" were utilized to calculate the estimated loads of P in kilograms (kg) per year. Pollutant loading rates from Table 2.6 of the publication "Fundamentals of Urban Runoff Management" dated August 1994 were utilized to calculate the estimated number of FC per year. The Pollutant Loading

Coefficient Method was utilized to calculate the estimated loads. The estimated annual load from each of the existing drainage areas is shown on the table below:

Table 7
Stormwater Pollutant Summary
Existing Conditions

DRAINAGE AREA Existing Conditions	POLLUTANT	
	TP (kg/yr.)	FC (no./yr.)
DP-1	10.82	2.2 E+11
DL-2	2.26	6.0 E+11
DL-3	0.35	7.4 E+10
DP-4	0.11	2.8 E+10

A stormwater pollutant loading analysis was performed for each drainage area under proposed conditions. The pollutants analyzed were total phosphorus (TP) and fecal coliform (FC). Pollutant loading rates and removal efficiencies from the East of Hudson Watershed Corporation publication "Stormwater Retrofit Project Design Manual Project Years 6-10" were utilized to calculate the estimated loads of P in kilograms (kg) per year. The Pollutant Loading Coefficient Method was utilized to calculate the estimated loads. Pollutant loading rates from Table 2.6 of the publication "Fundamentals of Urban Runoff Management" dated August 1994 were utilized to calculate the estimated number of FC per year. The lower range of the removal efficiencies from Figure 15 of "Reducing the Impacts of Stormwater Runoff from New Development" was utilized in the FC pollutant loading calculations. The estimated annual load from each of the proposed drainage areas is shown on the table below:

Table 8
Stormwater Pollutant Summary
Proposed Conditions

DRAINAGE AREA Proposed Conditions	POLLUTANT	
	TP (kg/yr.)	FC (no./yr.)
DP-1	9.41	2.3 E+11
DL-2	7.01	2.5 E+11
DL-3	0.23	4.2 E+10
DP-4	0.11	2.8 E+10

The estimated percent change in annual stormwater pollutant loading is shown on the table below:

Table 9
Percent Change in Annual Stormwater Pollutant Loading (%)

POLLUTANT		
	TP	FC
DP-1	-13.0	+4.5
DL-2	+210.2	-58.3
DL-3	-34.3	-43.2
DP-4	0	0

VIII. SOIL EROSION & SEDIMENT CONTROL

A potential impact of the proposed development on any soils or slopes will be that of erosion and transport of sediment during construction. An Erosion and Sediment Control Management Program will be established for the proposed development, beginning at the start of construction and continuing throughout its course, as outlined in the "New York State Standards and Specifications for Erosion and Sediment Control," November 2016. A continuing maintenance program will be implemented for the control of sediment transport and erosion control after construction and throughout the useful life of the project.

The Operator shall have a qualified professional conduct an assessment of the site prior to the commencement of construction and certify that the appropriate erosion and sediment controls, as shown on the Sediment & Erosion Control Plans, have been adequately installed to ensure overall preparedness of the site for the commencement of construction. In addition, the Operator shall have a qualified professional conduct at least two site inspections every seven calendar days due to the Site being located within the Kensico Reservoir Basins. Inspections must be separated by a minimum of two full calendar days.

Prior to the commencement of construction activity, the owner or operator must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The owner or operator shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be

known as the trained contractor. The owner or operator shall ensure that at least one trained contractor is on site on a daily basis when soil disturbance activities are being performed.

The owner or operator shall have each of the contractors and subcontractors identified above sign a copy of the certification statement provided in Appendix K before they commence any construction activity.

Soil Description

As provided by the "Soil Survey of Putnam and Westchester Counties, New York" prepared by the Soil Conservation Service/U.S. Department of Agriculture, issued September 1994 soil classifications which exist on the subject site are described below:

Soils are placed into four hydrologic groups: A, B, C, and D. In the definitions of the classes, infiltration rate is the rate at which water enters the soil at the surface and is controlled by the surface conditions. Transmission rate is the rate at which water moves in the soil and is controlled by soil properties. Definitions of the classes are as follows:

- A. (Low runoff potential). The soils have a high infiltration rate even when thoroughly wetted. They chiefly consist of deep, well drained to excessively drained sands or gravels. They have a high rate of water transmission.
- B. The soils have a moderate infiltration rate when thoroughly wetted. They chiefly are moderately deep to deep, moderately well drained to well drained soils that have moderately fine to moderately coarse textures. They have a moderate rate of water transmission.
- C. The soils have a slow infiltration rate when thoroughly wetted. They chiefly have a layer that impedes downward movement of water or have moderately fine to fine texture. They have a slow rate of water transmission.
- D. (High runoff potential). The soils have a very slow infiltration rate when thoroughly wetted. They chiefly consist of clay soils that have a high swelling potential, soils that have a permanent high-water table, soils that have a claypan or clay layer at or near the surface, and shallow soils over nearly impervious material. They have a very slow rate of water transmission.

A soil's tendency to erode is also described in the USDA web soil survey. The ratings in this interpretation indicate the hazard of soil loss from unsurfaced areas. The ratings are based on soil erosion factor K, slope, and content of rock fragments. The hazard is described as "slight," "moderate," or "SEVERE." A rating of "slight" indicates that little or no erosion is likely; "moderate" indicates that some erosion is likely, that the temporarily unsurfaced / unstabilized during construction may require occasional maintenance, and that simple erosion-control measures are needed; and "SEVERE" indicates that significant erosion is expected, that the roads or trails require frequent maintenance, and that erosion-control measures are needed.

Per the Soil Survey, the following soils listed below are present at the site. Following this list is a detailed description of each soil type found on the property:

<u>SYMBOL</u>	<u>DESCRIPTION</u>
ChB	Charlton loam, 2 to 8 percent slopes
ChC	Charlton loam, 8 to 15 percent slopes
CrC	Charlton-Chatfield complex, rolling, very rocky
CsD	Chatfield-Charlton complex, hilly, very rocky
PnB	Paxton fine sandy loam, 2 to 8 percent slopes
PnC	Paxton fine sandy loam, 8 to 15 percent slope

Table 10 "Soil Characteristics", provides information on erodibility of the soil surface, hydrologic group, runoff potential, depth to bedrock and depth to seasonal water table.

Table 10
Soil Characteristics

Symbol	Soil Name and (Slope)	Erosion Hazard	Hydrologic Group	Surface Runoff Potential	Depth to Bedrock (in)	Depth to Seasonal Watertable (ft)
ChB	Charlton-loam (2-8%)	Slight	B	Medium	60+	6+
ChC	Charlton loam (8-15%)	Slight	B	Medium	60+	6+
CrC*	Charlton-Chatfield, rolling	Moderate*	B	Medium	60+	6+
CsD**	Charlton-Chatfield, hilly	Severe**	B	Rapid	60+	6+
PnB	Paxton fine sandy loam (2-8%)	Slight	C	Medium	60+	1.5-2.5
PnC	Paxton fine sandy loam (8-15%)	Slight	C	Medium	60+	1.5-2.5

Table 11, "Soil Limitations" provides the construction limitations for each soil type that exists on the project site.

Table 12
Soil Limitations

Symbol	Soil Name and (Slope)	Construction Limitations			
		Shallow Excavations	Dwellings without Basements	Dwellings With Basements	Local Roads and Streets
ChB	Charlton-loam (2-8%)	Slight	Slight	Slight	Slight
ChC	Charlton loam (8-15%)	Moderate, Slope	Moderate, Slope	Moderate, Slope	Moderate, Slope
CrC*	Charlton-Chatfield, rolling	Moderate, Slope	Moderate, Slope	Moderate, Slope	Moderate, Slope
CsD**	Charlton-Chatfield, hilly	Severe, Depth to Rock, Slope	Severe, Slope	Severe, Depth to Rock, Slope	Severe, Slope
PnB	Paxton fine sandy loam (2-8%)	Moderate, Dense Layer, Wetness	Moderate, Wetness	Moderate, Wetness	Moderate, Wetness, Frost Action
PnC	Paxton fine sandy loam (8-15%)	Moderate, Dense Layer, Wetness, Slope	Moderate, Wetness, Slope	Moderate, Wetness, Slope	Moderate, Wetness, Slope, Frost Action

* The CrC soil type is situated in the westerly portion of the Cooney Hill area. No development is proposed in this area other than a portion of a walking trail.

**The CsD soil type is situated along the westerly boundary of the Cooney Hill area. No development is proposed in this area.

On-Site Pollution Prevention

There are temporary pollution prevention measures used to control litter and construction debris on site, such as:

- Temporary Riser and Anti-Vortex Device
- Silt Fence
- Silt Sack
- Excavated Drop Inlet Protection
- Stone & Block Drop Inlet Protection

There will be inlet protection provided for all storm drains and inlets with the use of curb gutter inlet protection structures and stone & block drop inlet protection, which keep silt, sediment and construction litter and debris out of the on-site stormwater drainage system.

Temporary Control Measures

Temporary control measures and facilities will include silt fences, interceptor swales, stabilized construction access, temporary seeding, mulching and sediment traps with temporary riser and anti-vortex devices.

Throughout the construction of the proposed redevelopment, temporary control facilities will be implemented to control on-site erosion and sediment transfer. Interceptor swales, if required, will be used to direct stormwater runoff to temporary sediment traps for settlement. The sediment traps will be constructed as part of this project will serve as temporary sediment basins to remove sediment and pollutants from the stormwater runoff produced during construction.

Descriptions of the temporary sediment & erosion controls that will be used during the development of the site including silt fence, stabilized construction access, seeding, mulching and inlet protection are as follows:

1. Silt Fence is constructed using a geotextile fabric. The fence will be either 18 inches or 30 inches high. The height of the fence can be increased in the event of placing these devices on uncompacted fills or extremely loose undisturbed soils. The fences will not be placed in areas which receive concentrated flows such as ditches, swales and channels nor will the filter fabric material be placed across the entrance to pipes, culverts, spillway structures, sediment traps or basins.
2. Stabilized Construction Access consists of AASHTO No. 1 rock. The rock entrance will be a minimum of 50 feet in length by 24 feet in width by 8 inches in depth.
3. Seeding will be used to create a vegetative surface to stabilize disturbed earth until at least 80% of the disturbed area has a perennial vegetative cover. This amount is required to adequately function as a sediment and erosion control facility. Grass lining will also be used to line temporary channels and the surrounding disturbed areas.
4. Mulching is used as an anchor for seeding and disturbed areas to reduce soil loss due to storm events. These areas will be mulched with straw at a rate of 3 tons per acre such that the mulch forms a continuous blanket. Mulch must be placed after seeding or within 48 hours after seeding is completed.

5. Inlet Protection will be provided for all stormwater basins and inlets with the use of curb & gutter inlet protection and stone & block inlet protection structures, which will keep silt, sediment and construction debris out of the storm system. Existing structures within existing paved areas will be protected using "Silt Sacks" inside the structures.
6. Erosion Control Matting will be utilized on slopes and within swales, where applicable, to provide stabilization in advance of vegetation being established. Such matting will be biodegradable to facilitate long term growth of vegetation in swales, on slopes and within stormwater management facilities.
7. Sediments Traps will be used with the permanent SMP's until their contributing areas drainage are stabilized. Once stabilized, the temporary risers will be removed, and final grading/planting of the basins will be completed for permanent use as Stormwater Management Practices.
8. Temporary Sediment Basins will be constructed to intercept sediment laden runoff and trap and retain the sediment. The sediment basins are sized to provide a sediment storage volume of 3,600 cubic feet per acre draining to the basin. The Sediment Basins will be used with the permanent SMP's until their contributing drainage areas are stabilized. Once stabilized, the temporary risers will be removed, permanent outlet control structures will be installed and final grading/planting of the sediment basins will be completed for permanent use as Stormwater Management basins. Sediment Basin sizing standards, details and calculations are provided in Appendix "G."
9. Temporary Riser and Anti-Vortex Devices are placed at the bottom of the temporary sediment basins where they intercept and collect debris and litter from the pond before they can enter the off-site storm drainage system.
10. Stone Check Dams are small barriers of crushed stone which will be laid across the grass swales which are approximately 12 inches high, located every one foot of elevation change along the swales so that the crest elevation of the downstream dam is at the same elevation of the toe of the upstream dam.

The contractor shall be responsible for maintaining the temporary sediment and erosion control measures throughout construction. This maintenance will include, but not be limited to, the following tasks:

1. For dust control purposes, moisten all exposed graded areas with water at least twice a day in those areas where soil is exposed and cannot be planted with a temporary cover due to construction operations or the season (December through March).
2. Inspection of erosion and sediment control measures shall be performed at the end of each construction day and immediately following each rainfall event. All required repairs shall be immediately executed by the contractor.
3. Sediment deposits shall be removed when they reach approximately $\frac{1}{3}$ the height of the silt fence. All such sediment shall be properly disposed of in fill areas on the site, as directed by the Owner's Field Representative. Fill shall be protected following disposal with mulch, temporary and/or permanent vegetation and be completely circumscribed on the downhill side by silt fence.
4. Rake all exposed areas parallel to the slope during earthwork operations.
5. Following final grading, the disturbed area shall be stabilized with a permanent surface treatment (i.e. turf grass, pavement or sidewalk). During rough grading, areas which are not to be disturbed for fourteen or more days shall be stabilized with the temporary seed mixture, as defined on the plans. Seed all piles of dirt in exposed soil areas that will not receive a permanent surface treatment.

Concrete Material and Equipment Management

Concrete washouts shall be used to contain concrete and liquids when the chutes of concrete mixers and hoppers of concrete pumps are rinsed out after delivery. The washout facilities consolidate solid for easier disposal and prevent runoff of liquids. The wash water is alkaline and contains high levels of chromium, which can leach into the ground and contaminate groundwater. It can also migrate to a storm drain, which can increase the pH of area waters and harm aquatic life. Solids that are improperly disposed of can clog storm drain pipes and cause flooding. Installing concrete washout facilities not only prevents pollution but also is a matter of good housekeeping at your construction site.

Prefabricated concrete washout containers can be delivered to the site to provide maintenance and disposal of materials. Regular pick-ups of solid and liquid waste materials will be necessary. To prevent leaks on the job site, ensure that prefabricated washout containers are watertight. A self installed concrete washout facility can be utilized although they are much less reliable than prefabricated containers and are prone to leaks. There are many design options for the washout, but they are preferably built below-grade to prevent breaches and reduce the likelihood of runoff. Above-grade structures can also be used if they are sized and constructed correctly and are diligently maintained. One of the most common problems with self-installed concrete washout facilities is that they can leak or be breached as a result of constant use, therefore the contractor shall be sure to use quality materials and inspect the facilities on a daily basis.

Washouts must be sized to handle solids, wash water, and rainfall to prevent overflow. Concrete Washout Systems, Inc. estimates that 7 gallons of wash water are used to wash one truck chute and 50 gallons are used to wash out the hopper of a concrete pump truck.

For larger sites, a below-grade washout should be at least 10 feet wide and sized to contain all liquid and solid waste expected to be generated in between cleanout periods. A minimum of 12-inches of freeboard must be provided. The pit must be lined with plastic sheeting of at least 10-mil thickness without holes or tears to prevent leaching of liquids into the ground. Concrete wash water should never be placed in a pit that is connected to the storm drain system or that drains to nearby waterways.

An above-grade washout can be constructed at least 10 feet wide by 10 feet long and sized to contain all liquid and solid waste expected to be generated in between cleanout periods. A minimum of 4-inches of freeboard must be provided. The washout structures can be constructed with staked straw bales or sandbags double-or triple lined with plastic sheeting of at least 10-mil thickness without holes or tears.

Concrete washout facilities shall not be located within 50 feet of storm drains, open ditches, or water bodies and should be placed in locations that allow for convenient access for concrete trucks. The contractor shall check all concrete washout facilities daily to determine if they have been filled to 75 percent capacity, which is when materials need to be removed. Both above-and below-ground self-installed washouts should be inspected daily to ensure that plastic linings are

intact and sidewalls have not been damaged by construction activities. Prefabricated washout containers should be inspected daily as well as to ensure the container is not leaking or nearing 75 percent capacity. Inspectors should also note whether the facilities are being used regularly. Additional signage for washouts may be needed in more convenient locations if concrete truck operators are not utilizing them.

The washout structures must be drained or covered prior to predicted rainstorms to prevent overflows. Hardened solids either whole or broken must be removed and then they may be reused onsite or hauled away for recycling.

Once materials are removed from the concrete washout, a new structure must be built or excavated, or if the previous structure is still intact, inspect it for signs of weakening or damage and make any necessary repairs. Line the structure with new plastic that is free of holes or tears and replace signage if necessary. It is very important that new plastic be used after every cleaning because pumps and concrete removal equipment can damage the existing liner.

Construction Site Chemical Control

The purpose of this management measure is to prevent the generation of nonpoint source pollution from construction sites due to improper handling and usage of nutrients and toxic substances, and to prevent the movement of toxic substances from the construction site.

Many potential pollutants other than sediment are associated with construction activities. These pollutants include pesticides; fertilizers used for vegetative stabilization; petrochemicals; construction chemicals such as concrete products, sealers, and paints; wash water associated with these products; paper; wood; garbage; and sanitary waste.

Disposal of excess pesticides and pesticide-related wastes should conform to registered label directions for the disposal and storage of pesticides and pesticide containers set forth in applicable Federal, State and local regulations that govern their usage, handling, storage, and disposal.

Pesticides should be disposed of through either a licensed waste management firm or a treatment, storage and disposal (TSD) facility. Containers should be triple-rinsed before disposal, and rinse waters should be reused as product.

Other practices include setting aside a locked storage area, tightly closing lids, storing in a cool, dry place, checking containers periodically for leaks or deterioration, maintaining a list of products in storage, using plastic sheeting to line the storage areas, and notifying neighboring property owners prior to spraying.

When storing petroleum products, follow these guidelines:

- Create a shelter around the area with cover and wind protection;
- Line the storage area with a double layer of plastic sheeting or similar material;
- Create an impervious berm around the perimeter with a capacity of 110 percent greater than that of the largest container;
- Clearly label all products;
- Keep tanks off the ground; and
- Keep lids securely fastened.

Post spill procedure information and have persons trained in spill handling on site or on call at all times. Materials for cleaning up spills should be kept on site and easily available. Spills should be cleaned up immediately and the contaminated material properly disposed of. Maintain and wash equipment and machinery in confined areas specifically designed to control runoff.

Thinners or solvents should not be discharged into sanitary or storm systems when cleaning machinery. Use alternative methods for cleaning larger equipment parts, such as high-pressure, high-temperature water washes, or steam cleaning. Equipment-washing detergents can be used, and wash water may be discharged into sanitary sewers if solids are removed from the solution first. (This practice should be verified with the local sewer authority.) Small parts can be cleaned with degreasing solvents, which can then be reused or recycled.

Solid Waste Management and Portable Sanitary Management

The purpose of this management measure is to prevent the potential for solid waste such as construction debris, trash, etc. from construction sites due to improper handling and storage. Debris and litter should be removed periodically from the BMP's and surrounding areas to prevent clogging of pipes and structures. All construction material shall be stored in designated staging areas. Roll-off containers shall be placed on site and all empty containers, construction debris and litter shall be placed in the containers.

Portable sanitary units may be utilized on-site or bathrooms will be provided within construction trailers. A sanitation removal company will be hired to pump/remove any sanitary waste. In the event that portable sanitary units are used and then cleaned after being emptied, the rinse water may not be disposed of to the storm drain system. It shall be contained for later disposal if it can't be disposed of on-site. Remove paper and trash before cleaning the portable sanitary units. The portable sanitary units shall be located away from the storm drain system if possible. Provide over head cover for wash areas if possible. Maintain spill response material and equipment on site to eliminate the potential for contaminants and wash water from entering the storm drain system.

Permanent Control Measures and Facilities for Long Term Protection

Towards the completion of construction, permanent sediment and erosion control measures will be developed for long term erosion protection. The following permanent control measures and facilities have been proposed to be implemented for the project:

1. Vegetated Swales will function to provide additional treatment of stormwater runoff by removal of pollutants and will promote a reduction of peak flows and provide runoff infiltration.
2. Infiltration Basin will be used to treat the runoff volume generated from the developed area and provide improvement to water quality control. The proposed basin will provide water quality for 1-year storm stormwater runoff volume. The water quality volume will be retained and higher storms will be released gradually.
3. Bioretention Area a shallow depression that treats stormwater as it flows through a soil matrix, and is returned to the storm drain system
4. First Defense High Capacity Water Quality Structure will be used to provide treatment of the water quality flow rate for separating sediment, debris, floatables, etc. from the runoff prior to discharge to bioretention area. The First Defense High Capacity Water Quality Structure has been designed to treat up to the required water quality volume and appropriately handle all storm frequencies without the resuspension of solids.
5. Infiltration System (I-2) which is a standard SMP that will be used to treat the runoff volume generated from a portion of the developed area and provide additional water quality and

runoff volume reduction. The smaller storms will be retained and the higher storms will be released gradually.

The StormTech SC-740 Recharge Chambers are domed shaped fully opened bottom corrugated chambers with perforated side walls. Chambers allow stormwater to be stored within the dome void until it can infiltrate into the ground. They are able to be used for residential, commercial or industrial applications and provide an easy way to treat and dispose of stormwater runoff underground. Water is infiltrated into the ground through the chambers and surrounding crushed stone and will replenish the groundwater as a natural condition.

The Isolator Row is a row of StormTech chambers that is surrounded with filter fabric and connected to a closely located manhole for easy access. The fabric-wrapped chambers provide for settling and filtration of sediment as stormwater rises in the Isolator Row and ultimately passes through the filter fabric. The open bottom chambers and perforated sidewalls allow stormwater to flow both vertically and horizontally out of the chambers. Sediments are captured in the Isolator Row protecting the storage access of the adjacent stone and chambers from sediment accumulation.

The Isolator Row is designed to capture the "first flush" and offers the versatility to be sized on a volume basis or flow rate basis. An upstream manhole not only provides access to the Isolator Row but includes a high flow weir such that stormwater flow rates or volumes that exceed the capacity of the Isolator Row overtop the overflow weir and discharge through a manifold to the other standard chambers. By treating stormwater prior to entry into the chamber system, the service life can be extended and pollutants such as hydrocarbons can be captured.

6. Catch Basins will be used to remove some of the coarse sand and grit sediment before entering the drainage system. Each catch basin will be constructed with an 18-inch-deep sump.
7. Rip-Rap Energy Dissipators at discharge points from the stormwater drainage system into the stormwater management basins, rip-rap pads consisting of angular rocks will be placed to dissipate velocity and reduce the risk of erosion.

8. Seeding of at least 70% perennial vegetative cover will be used to produce a permanent uniform erosion resistant surface. The seeded areas will be mulched with straw at a rate of 2 tons per acre such that the mulch forms a continuous blanket.

Specifications for Soil Restoration

Prior to the final stabilization of the disturbed areas, soil restoration will be required for all vegetated areas to recover the original properties and porosity of the soil. Soil Restoration Requirements are provided on Table 12 below:

Table 12
Soil Restoration Requirements

Type of Soil Disturbance	Soil Restoration Requirement		Comments/Examples
No soil disturbance	Restoration not permitted		Preservation of Natural Features
Minimal soil disturbance	Restoration not required		Clearing and grubbing
Areas where topsoil is stripped only – no change in grade	HSG A&B	HSG C&D	Protect area from any ongoing construction activities
	apply 6 inches of topsoil	Aerate* and apply 6 inches of topsoil	
Areas of cut or fill	HSG A&B	HSG C&D	Clearing and grubbing
	Aerate and apply 6 inches of topsoil	Apply full Soil Restoration**	
Heavy traffic areas on site (especially) in a zone 5-25 feet around buildings but not within a 5 foot perimeter around foundation walls)	Apply full Soil Restoration (decompaction and compost enhancement)		
Areas where Runoff Reduction and/or Infiltration practices are applied	Restoration not required, but may be applied to enhance the reduction specified for appropriate practices.		Keep construction equipment from crossing these areas. To protect newly installed practice from any ongoing construction activities construct a single phase operation fence area.
Redevelopment projects	Soil Restoration is required on redevelopment projects in areas where existing impervious area will be converted to pervious area.		

* Aeration includes the use of machines such as tractor-drawn implements with coulters making a narrow slit in the soil, a roller with many spikes making indentations in the soil, or prongs which function like a mini-subsoiler.

** Per "Deep Ripping and De-compaction, DEC 2008."

During periods of relatively low to moderate subsoil moisture, the disturbed subsoils are returned to rough grade and the following full soil restoration steps applied:

1. Apply 3 inches of compost over subsoil.
2. Till compost into subsoil to a depth of at least 12 inches using a cat-mounted ripper, tractor-mounted disc, or tiller, mixing, and circulating air and compost into subsoils.
3. Rock-pick until uplifted stone/rock materials of four inches and larger size are cleaned off the site.

Specifications for Final Stabilization of Graded Areas

Final stabilization of graded areas consists of the placement of topsoil and installation of landscaping (unless the area is to be paved, or a building is to be constructed in the location). Topsoil is to be spread as soon as grading operations are completed. Topsoil is to be placed to a minimum depth of six inches on all embankments, planting areas and seeding/sod areas. The subgrade is to be scarified to a depth of two inches to provide a bond of the topsoil with the subsoil. Topsoil is to be raked to an even surface and cleared of all debris, roots, stones and other unsatisfactory material.

Planting operations shall be conducted under favorable weather conditions as follows:

- Permanent Lawns - April 15 (provided soil is frost-free and not excessively moist) to May 15; August 15 to October 15.
- Temporary Lawn Seeding - if outside of the time periods noted above, the areas shall be seeded immediately on completion of topsoil operations with annual ryegrass (Italian rye) at a rate of six pounds per 1,000 square feet. Temporary lawn installation is permitted provided the soil is frost-free and not excessively moist. The permanent lawn is to be installed the next planting season.

On slopes with a grade of 3 horizontal to 1 vertical or greater, and in swales, a geotextile netting or mat shall be installed for stabilization purposes as shown on the Plans. Seeded areas are to be mulched with straw or hay at an application rate of 70-90 pounds per 1,000 s.f. Straw or hay mulch must be spread uniformly and anchored immediately after spreading to prevent wind blowing. Mulches must be inspected periodically and in particular after rainstorms to check for

erosion. If erosion is observed, additional mulch must be applied. Netting shall be inspected after rainstorms for dislocation or failure; any damage shall be repaired immediately.

All denuded surfaces which will be exposed for a period of over two months or more shall be temporarily hydroseeded with (a) perennial ryegrass at a rate of 40 lbs per acre (1.0 lb per 1000 square feet); (b) Certified "Aroostook" winter rye (cereal rye) @ 100 lb per acre (2.5 lb/1000 s.f.) to be used in the months of October and November.

Permanent turfgrass cover is to consist of a seed mixture as follows:

(a) Sunny sites

Kentucky Bluegrass	2.0-2.6 pounds/1000 square feet
Perennial Ryegrass	0.6-0.7 pounds/1000 square feet
Fine Fescue	0.4-0.6 pounds/1000 square feet

(b) Shady sites

Kentucky Bluegrass	0.8-1.0 pounds/1000 square feet
Perennial Ryegrass	0.6-0.7 pounds/1000 square feet
Fine Fescue	2.6-3.3 pounds/1000 square feet

All plant materials shall comply with the standards of the American Association Of Nurserymen with respect to height and caliper as described in its publication American Standard for Nursery Stock, latest edition.

IX. CONSTRUCTION PHASE AND POST-CONSTRUCTION MAINTENANCE

During the construction phase and following construction of the project, a number of maintenance measures will be taken with respect to the site maintenance. Measures to be taken included the following:

I. During Construction

A comprehensive sediment and erosion control plan will be in place during the construction period. Maintenance measures for sediment and erosion controls will include:

A qualified professional acceptable to the municipality will be hired by the owner or operator to monitor the installation and maintenance of the sediment and erosion control plans. The

qualified professional shall report directly to the Engineering Consultant and shall be responsible for ensuring compliance with the design of the sediment and erosion control plans.

The qualified professional so hired will inspect all sediment and erosion control measures at least twice every seven calendar days, with inspections separated by a minimum of two (2) full calendar days. In the event that there has been a variance with the design of the sediment and erosion control measures so that the ability of the measures to adequately perform the intended function is lessened or compromised and/or the facilities are not adequately maintained, the qualified professional shall be required to report such variance to the Engineering Consultant within 48 hours and shall be empowered to order immediate repairs to the sediment and erosion control measures.

The qualified professional will also be responsible for observing the adequacy of the vegetation growth (trees, shrubs, groundcovers and turfgrasses) in newly graded areas and for ordering additional plantings in the event that the established plant materials do not adequately protect the ground surface from erosion.

2. Following Construction

Site maintenance activities on the property will include:

- Grounds maintenance, including mowing of lawns;
- Planting of trees, shrubs and groundcovers; pruning of trees and shrubs;
- Application of fertilizer and herbicides;
- Maintenance of stormwater management area;

Grounds maintenance on the site will be performed by landscaping contractor.

All applications of fertilizers shall be in accordance with the Nutrient Runoff Law – ECL Article 17, Title 21 and the Fertilizer Application Standard in the NYS Blue Book. Therefore, under NY Law, fertilizer containing phosphorus may only be applied to lawn or non-agricultural turf when a soil test indicates that additional phosphorus is needed for growth of lawn or non-agricultural turf, or the fertilizer is used for newly established lawn or non-agricultural turf during the first growing season.

Fertilizer applications shall meet the following specifications:

1. In no case shall fertilizer be applied between December 1 and April 1 annually.
2. Fertilizer shall not be spread within 20 feet of a surface water.
3. Any fertilizer falling or spilled into impervious surface such as parking lots, roadways and sidewalks should be immediately contained and legally applied or placed in an appropriate container.
4. Incorporate the fertilizer, and lime if specified, into the top 2-4 inches of topsoil or soil profile.
5. When applying fertilizer by hydro seeding care should be taken to apply mix only to seed bed areas at an appropriate flow rate to prevent erosion and spraying onto impervious areas.

Since this project is located within the NYCEP watershed, where enhanced phosphorus removal standards are required as part of its post-construction stormwater management plan, the use of any fertilizer containing more than 0.67 percent phosphate (P_2O_5) content shall be done only with a valid soil test demonstrating the need for that information.

Fertilizer is typically applied twice in the year - once in the spring and once in the fall. The application of fertilizer is usually necessary to maintain healthy lawn growth due to competition for nutrients with trees and shrubs and since the clippings are often removed. It is not recommended that fertilizer be applied during the summer. It is at this time that lawns are typically dormant.

Fertilizers come in three basic types: (1) Organic; (2) Soluble synthetic and (3) Slow release.

Organic fertilizers are derived from plant or animal waste. Since they are heavier and bulkier than other fertilizers, it is necessary to apply a much greater amount at one time. Soluble synthetic fertilizers are predictable with determining the exact impact on a lawn. However, more applications are necessary since their effect is often short term. Slow release fertilizers have a high percentage of nitrogen so quantities that need be handled at one time are smaller. Slow release fertilizers will be utilized by the project.

A complete fertilizer contains all three of the primary nutrients - nitrogen (N), phosphorus (P) and potassium in the form of potash (K). Typically, a 3-1-2 ratio of nutrients (N-P-K) is used for lawn applications.

Fertilizer shall be applied by the landscape contractor in accordance with the manufacturer's instructions. The application of fertilizer does require some skill on the part of the operator.

Should there be a spill of fertilizer, the landscape contractor shall be required to scrape or vacuum it up. The area will then be watered in accordance with the manufacturer's instructions to ensure that the fertilizer becomes soluble and available to plants and does not run off.

Airport Campus I-V LLC will be responsible for the long-term operation and maintenance of the permanent stormwater management practices. The permanent stormwater management practices shall be maintained in accordance with the Maintenance Inspection Checklists provided in Appendix I.

X. DISTURBANCE AUTHORIZATION, PROJECT PHASING & SEQUENCE OF CONSTRUCTION

The following section describes the construction phasing proposed for this project and the sequencing of the installation of erosion and sediment controls and the proposed construction.

The plan divides the site into the following two phases:

Phase I

The construction of a two-story garage, 68 townhomes on the southern portion of the property, along with private roadways and installation of related infrastructure. This phase will include the construction of four temporary sediment traps. The temporary sediment traps will be converted to a permanent stormwater infiltration basin, two bioretention basins and a detention basin at the end of Phase I. This phase is estimated to take 18 – 24 months.

Phase II

The construction of 57 townhomes, a clubhouse building, pool area, parking area, private roadways and installation of related infrastructure. This phase will include the construction of a temporary sediment basin at the southern end of the development area. The temporary sediment basin will be converted to a permanent stormwater detention pond at the end of Phase II. This phase is estimated to take 18 – 24 months.

The area of proposed ground disturbance within both phases to be constructed will at times exceed five (5) acres. Construction will be conducted in accordance with the NYSDEC SPDES General Permit GP-0-20-001. It is proposed, as described below, to stabilize each of these areas less than five acres in size prior to the commencement of construction of the next area. By constructing the Project in this manner, the potential for a large "shock load" of nutrient-laden

sediment to be discharged into the on-site and off-site wetlands and/or the Kensico Reservoir is much reduced.

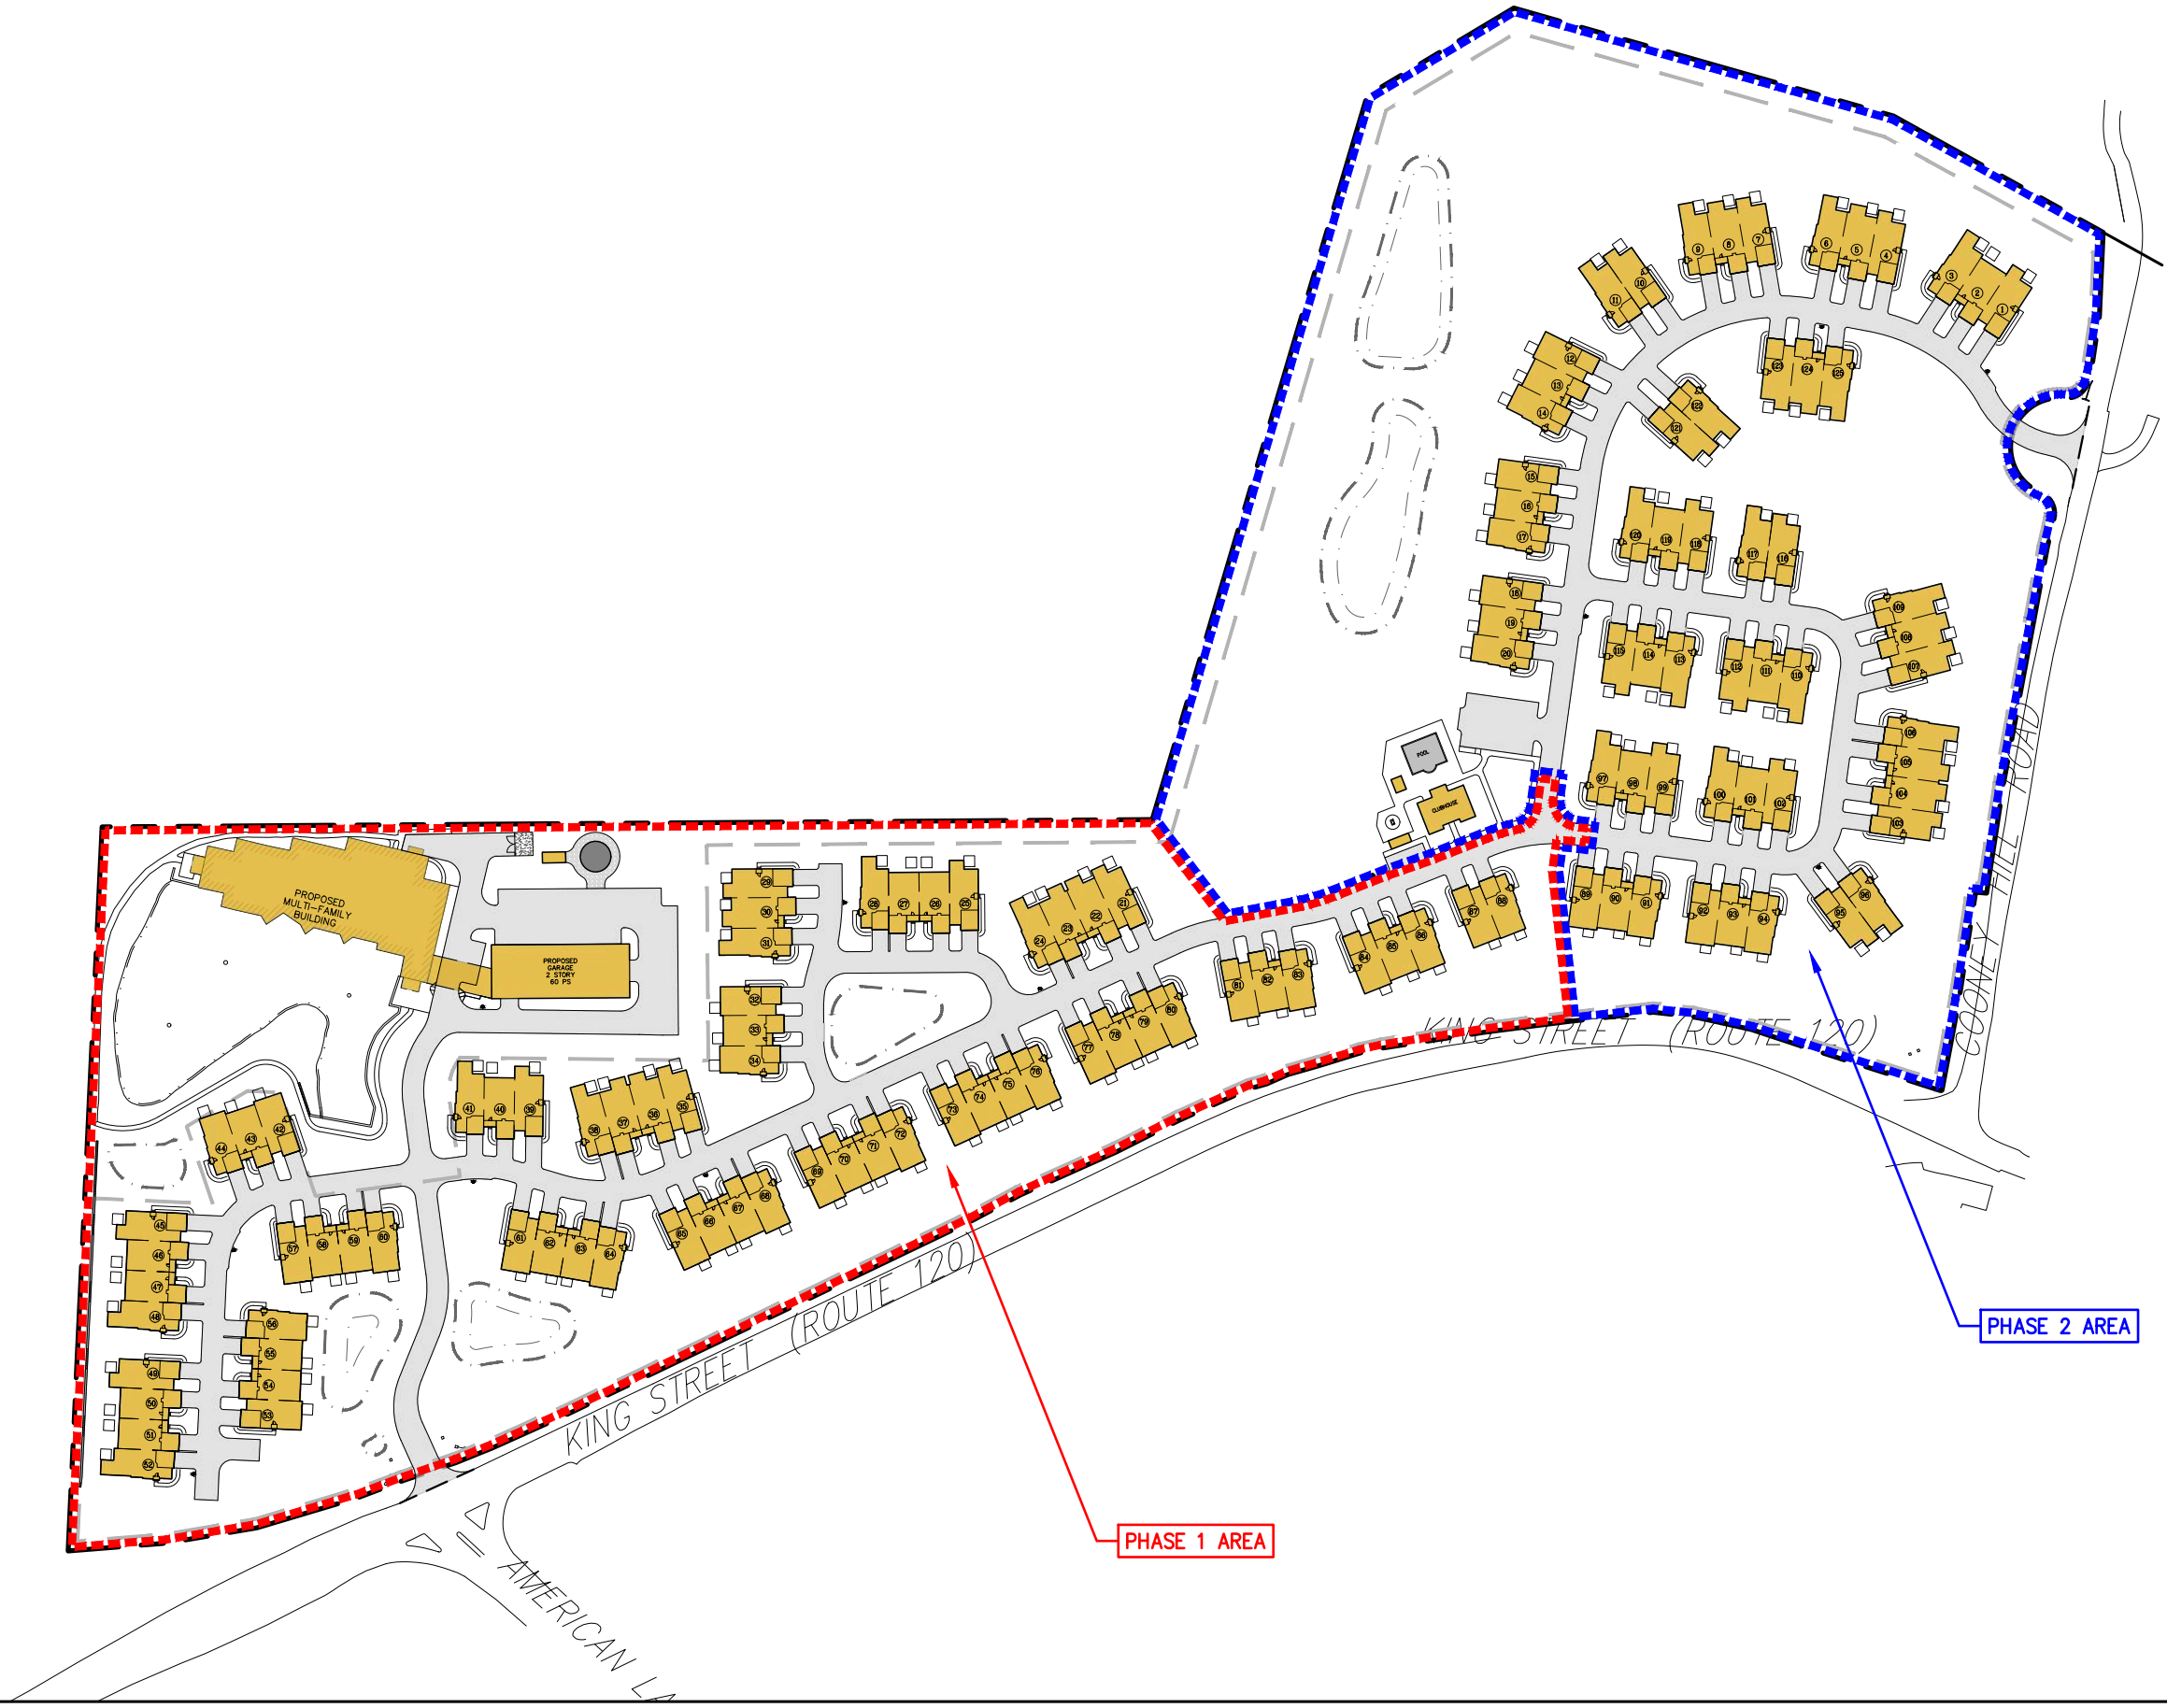

Therefore, and in accordance with NYSDEC SPDES General Permit No. GP-0-20-001 effective January 29, 2020 written authorization by the MS4 (Town of North Castle) to disturb greater than five (5) acres of soil at any one time is hereby requested, subject to the following provisions:

- i. The owner or operator shall have a qualified inspector conduct at least two (2) site inspections in accordance with Part IV.C. of this permit every seven (7) calendar days. The two (2) inspections shall be separated by a minimum of two (2) full calendar days.
- ii. In areas where soil disturbance activity has temporarily or permanently ceased, the application of soil stabilization measures must be initiated by the end of the next business day and completed within seven (7) days from the date the current soil disturbance activity ceased. The soil stabilization measures selected shall be in conformance with the technical standard, New York State Standards and Specifications for Erosion and Sediment Control, last revised November 2016.
- iii. The owner or operator shall prepare a phasing plan that defines maximum disturbed area per phase and shows required cuts and fills.
- iv. The owner or operator shall install any additional site-specific practices needed to protect water quality.
- v. The owner or operator shall include the requirements above in their SWPPP.

The minimum number of required weekly inspections will be two (2) erosion control inspections shall be made at the site every seven (7) calendar days.

In the circumstance of greater than five (5) acres of soil be disturbed at any one time, and the activity be temporarily or permanently ceased, then soil stabilization measures shall be initiated by the end of the next business day and completed within seven (7) days from ceasing activity.

The phasing of construction activities for the project is referenced on Figure 3 “Conceptual Construction Phasing”. Phase I of construction shall be fully stabilized prior to moving onto Phase II, except as approved by Town Engineer and under full time supervision of the owner’s field representative.

FIG-PHASING.dwg; PHASING.tab; PHASING.scr

Approximately 12,300 cubic yards of excess would be generated by the proposed excavation work involved in Phases I and II. The excavation would occur over a period of approximately 6 to 12 months dispersed within the combined phasing of Phases I and II. Utilizing a typically sized excavation truck with a capacity of 20 cubic yards per truck, approximately 3 to 6 trucks per day would access the site from Cooney Hill Road, receive their material, and depart King Street for I-684 to the south. Some truck traffic may utilize King Street to the north to access NY Route 22.

CONSTRUCTION ACCESS AND VEHICLE TRAVEL ON SITE

Throughout the project there will be different stabilized construction accesses to the site.

During construction all vehicles and equipment leaving the site under active construction shall utilize construction access depicted on the project Erosion & Sediment Control Plans.

Construction staging areas will be established and located for each phase/work area.

Construction vehicles shall not disturb any areas beyond the construction phase being worked on at the time except under the strict supervision of the owner's field representative.

The proposed project would generate trips from workers traveling to and from the site, as well as the movement of goods and equipment. The estimated average number of construction workers on-site at any one time would vary depending on the phase of construction. Over the life of the project, it is estimated that approximately 200 workers would be utilized.

Truck movements would be spread throughout the day and would generally occur between the hours of 6:30 AM and 4:30 PM, depending on the period of construction. It is anticipated that most traffic would access the site via Interstate 684 and King Street to the south, while some may access the site via NY Route 22 and King Street to the north.

SEQUENCE OF CONSTRUCTION

Construction shall be sequenced in such a manner that any area which is disturbed shall be first protected with erosion and sedimentation controls as indicated on Erosion and Sediment Control plans.

Phase I

The Sequence of Construction is as follows:

- I. Pre-construction meeting shall be held with representatives of the Town of North Castle and NYCDEP.

2. Establish stabilized construction access and staging areas.
3. Stake out limits of the proposed stormwater infiltration areas with orange construction fence.
4. Demolish northern office building and existing parking structure to foundation.
5. Install silt fence, inlet protection and tree protection fence as shown on plans.
6. Clear and grub for sediment traps. Strip and stockpile soil. Stockpile where indicated on plans and cover with seed and mulch.
7. Excavate for temporary sediment traps.
8. Establish temporary diversion ditches prior to any other clearing or grading.
9. Clear areas to be developed. Strip topsoil. Stockpile where indicated on plans and cover with seed and mulch.
10. Rough grade the site and establish swales with check dams.
11. Begin building and road construction. Seed and mulch all disturbed slopes.
12. Install storm drainage system. Immediately install inlet protection. Install the subsurface infiltration system and plug inlet until contributing drainage area is stabilized.
13. Install remaining utilities.
14. Install curbing and walkways.
15. Install pavement subbase and binder course for roads.
16. Redistribute topsoil, install landscaping, stabilized turf and permanent ground covers.
17. The contributing drainage area shall be completely stabilized prior to removing the erosion control devices.
18. Clean pavement and storm system of all accumulated sediment in conjunction with the removal of all temporary erosion and sediment and controls.
19. Install pavement top course.
20. Remove the sediment from the temporary sediment traps. Complete grading and landscaping for the permanent stormwater management basin and bioretention areas.

Phase 2

The Sequence of Construction is as follows:

1. Pre-construction meeting shall be held with representatives of the Town of North Castle and NYCDEP.

2. Establish stabilized construction access and staging areas.
3. Stake out limits of the proposed stormwater infiltration basin with orange construction fence.
4. Install silt fence, inlet protection and tree protection fence as shown on plans.
5. Clear and grub for stormwater infiltration basin and detention basin. Strip and stockpile soil. Stockpile where indicated on plans and cover with seed and mulch.
6. Begin excavation of stormwater infiltration basin and detention basin. Detention basin to be used as temporary sediment basin.
7. Install outlet control structure, temporary riser and anti-vortex device and emergency spillway.
8. Establish temporary diversion ditches prior to any other clearing or grading.
9. Clear areas to be developed. Strip topsoil. Stockpile where indicated on plan and cover with seed and mulch.
10. Rough grade the site and establish swales with check dams.
11. Begin building and roadway construction.
12. Install storm structures and associated storm system piping complete. Immediately install inlet protection. Plug inlet to infiltration basin until contributing drainage area is stabilized
13. Install remaining utilities.
14. Install curbing and walkways.
15. Install pavement subbase and binder course.
16. Redistribute topsoil, install landscaping, stabilized turf and permanent ground covers.
17. The contributing drainage area shall be completely stabilized prior to removing the erosion control devices and converting the temporary sediment basin to a permanent stormwater management basin.
18. Clean pavement and storm system of all accumulated sediment in conjunction with the removal of all temporary erosion and sediment and controls.
19. Install pavement top course
20. Remove the sediment from the temporary sediment basin and complete grading and landscaping for the permanent stormwater detention basin.

XI. CONCLUSIONS

The proposed Stormwater Pollution Prevention Plan for Airport Campus will reduce the peak rate of runoff from the developed site to a rate of flow as not to exceed that which presently runs off the project area in its present condition as per the regulations of the Town of North Castle, the NYCDEP and NYSDEC SPDES General Permit No. GP-0-20-001 for Stormwater Discharges from Construction Activity. The proposed Stormwater Pollution Prevention Plan provides for runoff reduction and water quality in accordance with the regulations of the NYCDEP and the proposed NYSDEC SPDES General Permit No. GP-0-20-001 for Stormwater Discharges from Construction Activity.

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: BF-1A2 (IN)

Scenario: Post-Development-1 yr

Return Event: 1 years

Storm Event: 1 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: BF-1A2 (IN)

Scenario: Post-Development-50 yr

Return Event: 50 years

Storm Event: 50 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: BF-1B3 (IN)

Scenario: Post-Development-1 yr

Return Event: 1 years

Storm Event: 1 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: BF-1C (IN)

Scenario: Post-Development-5 yr

Return Event: 5 years

Storm Event: 5 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: DB-1A3 (IN)

Scenario: Post-Development-5 yr

Return Event: 5 years

Storm Event: 5 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: DB-1D (IN)

Scenario: Post-Development-5 yr

Return Event: 5 years

Storm Event: 5 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: DB-2B (IN)

Scenario: Post-Development-5 yr

Return Event: 5 years

Storm Event: 5 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: DL-2

Scenario: Post-Development-1 yr

Return Event: 1 years

Storm Event: 1 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)
23.500	397.00	397.00	397.00	397.00	397.00

Proposed Hydrologic Calculations

Subsection: Time vs. Elevation

Label: DL-3

Scenario: Post-Development-100 yr

Return Event: 100 years

Storm Event: 100 YR

Time vs. Elevation (ft)

Output Time increment = 0.050 hours

Time on left represents time for first value in each row.

Time (hours)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)	Elevation (ft)
